Workshop Notes and Queries.

[Answers are solicited from our readers to the questions published weekly on this page.]

QUESTION No. 420.—**Rheostat.**—*Please give me the address of a firm which sells rheostats suitable for controlling the current voltage of dynamos used for electro-plating gold, silver, etc.* C. S. S.

ANSWER:—Ward Leonard Electric Co., Bronxville, N. Y.; Wirt Electric Co., 180 Broadway, New York; Carpender Enclosed Resistance Co., 130th St. and Park Ave., New York; Cutter-Hammer Co., 136 Liberty St., New York.

QUESTION No. 421.—**To Remove Rust.**—*What is a good way to remove rust from steel?* T. S.

ANSWER:—This query was answered under Question No. 319, Dec. 17, 1902, to which a new method given by the *National Druggist* may be added: "To remove rust from steel or steel utensils, the following solution may be applied by means of a brush, after having removed any grease by rubbing with a clean, dry cloth: One hundred gm. stannic chloride are dissolved in 1 liter of water; this solution is next added to one containing 2 gm. tartaric acid dissolved in 1 liter of water, and, finally, add 20 c. cm. indigo solution diluted with 2 liters of water. After allowing the solution to act upon the stain for a few seconds, it is rubbed clean first with a moist cloth, and later with a dry cloth. To restore the polish use silver sand and jewelers' rouge.

QUESTION No. 422.—**Plaster of Paris.**—*Can plaster of paris castings be made hard so as to withstand the weather?* T. S.

ANSWER:—A method which may be welcomed by persons interested in plaster of paris castings is the following, taken from *Neueste Erfindungen und Erfahrungen*: "Plaster of paris may be hardened and rendered insoluble by ammonium borate after the following method: Dissolve boric acid in hot water and add sufficient ammonia water to the solution in order that the borate at first separated may be redissolved. The plaster of paris to be cast is stirred in with this liquid and the mass treated in the ordinary way. Articles already cast are simply washed with the liquid, which is quickly absorbed. The articles withstand the weather as well as if they were made of stone.

QUESTION No. 423.—**Repairing Mirrors.**—*I read your answer to Question No. 397 which told how cheap mirrors could be made. Can you please tell me how mirrors, of which the silvering is damaged and partly gone, may be repaired?* D. L.

ANSWER:—An answer to your question is given by the *National Druggist*. It reads as follows: "Place the mirror face downward on a table and with a bit of cotton clean off the spot to be silvered by rubbing it with a pledget of cotton. Now spread over the spot a piece of tinfoil a little larger than the area to be repaired, and, after spreading out smoothly, let fall on the center of it a drop of metallic mercury, and with a bit of chamois rub the foil until it becomes brilliant. Now place over the new amalgam a sheet of smooth writing paper and on it pile books or weights of any sort, and leave over night. The amount of weight needed is not great, but just sufficient to keep the new amalgam in close contact with the glass. The amount of mercury needed should correspond as nearly as possible to 3 drachms to the square foot of surface to be resilvered." We may say, in conclusion, that while the above reads "easy," the job itself requires considerable practice to do it neatly.

QUESTION No. 424.—**Mucilage.**—*I have often experienced difficulty in pasting labels on glass or tin boxes. After a certain time these labels come off. Do you know of any receipt that will give a good mucilage for the above purpose?* W. N.

ANSWER:—Mucilage of tragacanth is a satisfactory agent for affixing labels to glass, says the *Druggists' Circular and Chemical Gazette*. The mucilage is made by simply pouring over the gum enough water to about cover it. Then, as the gum swells, add more water from time to time in small portions, until the mucilage is brought to such consistency that it may be easily spread with the brush. The mucilage keeps fairly well without the addition of any antiseptic. Flour paste may answer better if the labels are on unusually heavy paper; it is more troublesome to make on account of the necessary boiling and does not keep so well as the tragacanth paste. By dissolving dextrin in cold water a tenacious paste is obtained. This, however, possesses a disagreeable odor. Difficulty is often, if not always, experienced in attempting to affix paper to tin or other metals by paste which is efficient on glass. When the mucilage becomes practically free from moisture it is apt to separate from the metallic surface. To obviate this, substances which have a strong attraction for water, such as calcium chloride and glycerin, are added to the paste. For a paste of this kind Eliel has proposed the following formulas:

(1) Tragacanth, one ounce; acacia, four ounces; thymol, 14 grains; glycerin, four ounces; water, sufficient to make two pints. Dissolve the gum in one pint of water, strain and add the glycerin, in which the thymol is suspended; shake well and add sufficient water to make two pints. This separates on standing, but a single shake mixes it sufficiently for use.

(2) Rye flour, eight ounces; powdered acacia, one ounce; glycerin, two ounces; oil of cloves, 40 drops; water, a sufficient quantity. Rub the rye flour and acacia to a smooth paste with eight ounces of cold water; strain through cheese cloth, and pour into one pint of boiling water and continue the heat until as thick as desired. When nearly cold add the glycerin and oil of cloves.

QUESTION No. 425.—**Aluminum.**—*Can you tell me how aluminum is polished, and how its color can be changed to that of another metal? I have been told that this can be easily done.* C. A. P.

ANSWER:—In the issue of THE CIRCULAR-WEEKLY of Nov. 26 last, in answer to Question No. 303, was described a method of polishing aluminum. The following is a method by which the metal acquires a beautiful polish, not, however, as white as silver or nickel, but of a nice blue, which is about the same as that of tin. We begin the first grinding by rubbing with the thumb, then it is made finer by rubbing with levigated emery added to grease. A kind of cake is made of this mixture, which is rubbed upon the polishing brushes. The last touch is made with rouge mixed with oil of turpentine. Aluminum is now used for many purposes, but its color, which is somewhat dull, is not always liked by everybody. "It is therefore well to know that it can be easily changed," says the *Revue International de L'Horlogerie*. The aluminum article is first pickled in hydrochloric acid (muriatic acid) or in caustic soda; then it is dipped in mercuric chloride, which decomposes itself and amalgamates with the surface of the metal, after which it is again dipped in the muriatic acid. It is then ready to receive a layer of the metal whose color is to be imitated. An adhering layer will spread over the aluminum by dipping it finally in a solution of the chemical salts of the desired metal. Aluminum thus treated will not lose this new color even when subjected to the rolling mill. It can then also be soldered by the ordinary methods.

QUESTION No. 426.—**Oxidized Silver.**—*How can silver articles be oxidized, i. e., how can I give them a nice black luster?* T. S.

ANSWER:—We have described on several occasions, methods of oxidizing, but when we discover any new process which may be useful, we gladly give it to our readers. The following is recommended by the *Journal der Goldschmiedekunst*: "The oxidation of silver is very simple, but some experience is necessary to secure a handsome black luster. Into a cup filled with water, throw about 10 grammes of liver of sulphur and mix well. Scratch the silver article as bright as possible with the scratch brush and dip into the warm liquid. Remove the object after two minutes and rinse off in water. Then scratch it up again and replace in the liquid. The process should be repeated two or three times, when a beautiful glossy black will be obtained."

QUESTION No. 427.—**Grease.**—*I have sometimes found that tools which I rubbed with grease became rusty. I suppose the grease must be bad. Is there any means of ascertaining the purity of grease?*

ANSWER:—There are more rational ways to prevent steel from rusting than the simple use of grease. We published several, but as this is not what you desire to know we will say that the purity of grease is proportionate to its density to water. Take a piece about the size of a green pea and place it in a glass of water. If it remains on top of the water or sinks slowly the grease can be considered to be pure; but if it falls quickly to the bottom the grease is mixed with heavier materials, and in this latter case its use will provoke coom.

Watchmakers occasionally employ a few acids and salts. They should never forget to keep them away from the workbench. Always wash well a piece of metal which has been in contact with these acids.

Don't Forget This

That in coming to our school you are not only getting the best instruction, but you will be able to live BETTER for LESS money in Lancaster than in any other place.

This is not a "line of talk," but an absolute fact conceded by all who have sojourned in Lancaster after experience elsewhere.

While comfortable living is important, the "main point" is the excellence of the instruction you will receive here. You will find that we fulfill all promises, and back the reputation we have earned of being "One of the Best of the VERY BEST."

THE RAMBLER'S NOTES.

WHAT THE RAMBLER SAW AND HEARD AMONG THE DEALERS IN ART POTTERY, CUT GLASS, BRONZES, ETC.

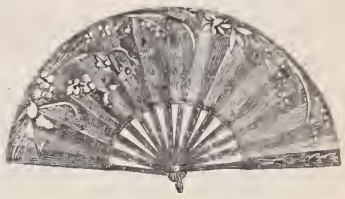
NOVEL SHAPE IN CUT GLASS VASES.

AMONG the new Spring shapes in cut glass few are more striking than the vase just put on the market by the J. D. Bergen Co., 38 Murray St., New York. This piece is made in three sizes and possesses all the merits of fine cutting combined with novelty of form different from anything formerly produced by this concern. The pieces in this shape have a base somewhat similar to those of water bottles, while the top is exceedingly broad and flaring, like

that of a trumpet vase, though sharper and more pronounced. Each piece is made from particularly fine blank and the space between the base and the finer cutting which ornaments the flare of the top, has a club and hollow diamond cutting. There are more than six different styles of cuttings in the decoration; that on the flare or trumpet of the vase is a combination of prism, sunbeam and jewel cutting, while the base is ornamented with a basket cutting, which combines effectively with a prism cut and produces an artistic effect. The piece has a scalloped edge. In general form these resemble the outline of certain ancient pottery and antique metal ware, which has been preserved in museums or by art societies. It was thought by Mr. Bergen, when viewing one of these pieces, that if something similar in form were to be made up in cut glass and ornamented with appropriate patterns, the pieces would not only be distinctly new, but would also prove to be good sellers. The experiment has shown that Mr. Bergen was correct in his surmise.

*

RUSSIAN AND DANISH POTTERY.



RUSSIAN pottery is seldom seen in the New York market, and especially is this true in regard to complete lines of articles. Mikael Samuel & Co., 41 Barclay St., New York, have now on display in their showrooms a large line of this ware, whose chief characteristic lies in the peculiar shapes and the odd, almost ugly, decorations which the pieces show. Drabs, greenish-yellows and similar colors varying in shade from light yellow to dark brown, are used in the decorations and are applied seemingly without regard to form or general effect. The samples this season, although peculiar in design and decoration, may appeal to jewelry buyers because of their odd features. In every respect they are artistic, if not beautiful, and a few pieces, carried with other lines, are certain to produce a striking contrast. In addition to these goods, the concern also has some fine pieces of Norwegian china and Danish terra cotta. The Norwegian china has a high, smooth polish, and its surface is not unlike that of rich French porcelain. Beneath the glaze are the decorations in quiet grays and light pinks and blues. In some instances these designs, which are wholly floral, are raised in relief. The Danish terra cotta has striking features, due to its high and plain colors and odd shapes. The colors are black, red, maroon, green, blue and gray, applied in bands of one-eighth of an inch to 2 inches in width horizontally around the pieces which they ornament. The shapes of some pieces are similar to old Greek vases, while a number of other pieces imitate the forms of antique jugs and water pitchers and have a smooth, dull finish. THE RAMBLER.

L. F. Summers, Milton, Ia., recently disposed of his business at that place.

The death is announced of J. Champlain, former president of the Cattaraugus Cutlery Co., Buffalo, N. Y. Mr. Champlain was 62 years of age and was a pioneer in the cutlery business in Buffalo.

Harry Richardson, a jeweler of Greenfield, Mass., possesses the honor of having been nominated by both parties for Assessor of Taxes in that town. The election was held April 6 and there was no opposition to him.

Charles M. Banks, Wilmington, Del., who will shortly move into a new store on Market St., at that place is a practical machinist as well as a jeweler, and has made numerous mechanical contrivances for his window displays.

Sand Blast Machines.

(Translated for The Jewelers' Circular-Weekly from *La Nature.*)

MACHINES propelling a stream of sand are every day applied to new purposes, in which the action of the sand is advantageously substituted for hand work. They may be utilized for engraving on stone, glass, crystal, marble in relief or the opposite; the grinding and "musining" (ornamentation) of glass; the scraping and polishing of metals and castings, and the cleaning of moulded pieces of all kinds. For these different purposes, the sand apparatus is operated with a rapidity and delicacy which cannot be equaled by hand-work. We will describe one of the types which is capable of being applied to all classes of work.

This includes three distinct pieces of apparatus: an air compressor, an air reservoir, designed to keep the flow of air as regular and homogeneous as possible, and the sand apparatus proper, so-called. The machine, represented in section in the accompanying illustration, consists in a general way of a sheet-iron cylinder, divided into four parts: a hopper, C, at the top; a reserve chamber, D; an exit chamber, E, and the blast-pipe chamber, F.

SAND BLAST MACHINE FOR CLEANING, POLISHING AND ENGRAVING METALS.

The hopper receives the sand designed for the operation from the outside. It supports, at its upper part, a metallic fence, designed to give access only to the sand, and to fine dust that cannot impede the working of the machine. At the base there is a valve, a, which the weight of the sand lowers to the stop, and which is placed on its seat when the work is commenced. This valve allows of feeding the machine without interrupting its action. The reserve chamber, D, receives the sand proceeding from the hopper, when the cock, *g*, is in the horizontal position; the valve, *b*, being at this moment closed by the pressure acting in the chamber E.

The exit chamber is fed with a determined quantity of sand, which, during the work is automatically renewed by the reserve chamber, D, of which the lower valve, *b*, poised by an equal pressure on both sides (the cock, *g*, being turned towards the bottom), gives passage to a quantity of sand equal to that which passes through the blast-pipe, F. The normal evacuation of the sand is assured by a vertical pipe passing through the layer of sand, and conducting the air to the upper part of chamber E, in such a way as to push the sand toward the orifice, *c*.

This operation is facilitated by impulse in the chamber F, through the blast-pipe, from which the sand is projected in such proportions that it will, so to say, be held in suspension in the layer of air impelling it, thereby avoiding the clogging of the jet-bearing pipe. The communication of these different chambers is secured by the cock, *g*, worked from the outside.

The necessary quantity of sand is regulated by the cock, *c*. To the extremity of the blast-pipe are fitted one or two flexible rubber pipes, according to the type of machine, bearing at the extremity a metal nozzle, from which the sand is projected directly on the piece to be worked.

This machine is simple, and its applications are of interest. It allows of perforating holes 40 millimeters in diameter in two minutes and a half in a stratum of lava 32 centimeters thick. Very hard plate glass, 14 mm. thick, is perforated in less than two minutes. A bicycle frame is entirely cleaned in eight or 10 minutes. A piece of sheet iron, strongly oxidized, and measuring a square meter, is completely cleaned and deadened in from seven to nine minutes. The European bridge, at Paris, has been thus cleaned.

The neatness of the work, its delicacy, regularity and rapidity, are great advantages. The new machines are calculated to render great service to many industries.

E. P. Davis, Lexington, N. C., has sold his stock to A. E. Sheets & Co., and will retire from business.

THE JEWELERS' CIRCULAR

THE HOROLOGICAL REVIEW,

WITH WHICH ARE CONSOLIDATED THE JEWELERS' WEEKLY. THE JEWELERS REVIEW

Copyright 1903 by THE JEWELERS' CIRCULAR PUB. CO.

Corbin Building, John St., Corner Broadway, New York.

Entered as second-class matter at the New York, N. Y., Post Office.

35TH YEAR. NEW YORK AND CHICAGO, WEDNESDAY, APRIL 15, 1903. VOL. XLVI. No. 11.

SILVERSMITHS' WORK IN ARTISTIC HORSE SHOW TROPHIES.

ONE of the most beautiful prizes ever presented at a Baltimore Horse Show is the Piper Heidseick cup, which has just been completed by the Roger Williams Silver Co., Providence, R. I. This challenge cup is for gig horses, the highest type of a horse that can be shown in a ring, and must be won three times by the same owner to become his property. It was donated by the Piper Heidseick Champagne Co., and is valued at $1,000.

As will be seen from the illustration, the trophy takes the form of a massive vase, standing about 42 inches high and weighing more than 300 ounces. It has a capacity of 21 pints, and is mounted with a removable cover. The vase, which is of sterling silver, follows the lines of the old Greek styles, and has two large, graceful handles which conform in every particular with the general shape and design of the body.

On the top of the cover is a finely modeled figure of a gig horse in a prancing position, while the cover, as well as the top and bottom of the body of the cup, is heavily hand chased. Applied wreaths appear on either side, one of which will contain the name of the donor, and the other the name of the winner. The vase is mounted on an ebony pedestal, highly polished, at the front of which appears a shield containing a figure design in bold relief, showing a gig horse and driver.

The fifth annual horse show at which this piece will be presented, will take place in Baltimore, May 14, 15 and 16, on the grounds of the Elkridge Hunt Club. The order for the cup was given to Wm. H. Saxton, 30 E. Baltimore St., Baltimore, for whom it was made by the Roger Williams Silver Co.

The cup was recently received by the Baltimore Horse Show Association and was put on exhibition last week.

THE PIPER HEIDSEICK CHALLENGE CUP.

German Kaiserin's Jewels.

WORD comes from Berlin that unusual interest was aroused at the late Court function by the costly and numerous array of jewelry worn by the Kaiserin. An inventory of the jewels possessed by Her Majesty shows that she has perhaps the most valuable collection of any reigning Queen in Europe.

The value of the Kaiserin's jewels is conservatively placed at 5,000,000 marks ($1,200,000). The gem of the collection is a diadem coronet consisting of a center diamond the size of a cherry, surrounded by from 40 to 50 smaller diamonds, creating a remarkably brilliant effect. The Kaiserin also has a collection of 30 diamond rings, some of them of very curious make and style.

Then there is a wealth of brooches, spangles, arm bracelets, diamond chains and smaller settings. Most of the jewels in the private possession of the Kaiserin are presents from the Kaiser or inherited from Empress Frederick, Empress Augusta and former Queens of Prussia. Some of the jewels worn this season by the Kaiserin are the property of the royal house and are placed at the disposal of the successive Empresses.

The Kaiserin is not especially fond of jewels, and wears only a modest pair of bracelets, one or two rings and brooch in daily life, reserving the more costly ornaments for the formal court functions.

New Clocks for El Paso County Court House, Colorado Springs, Col.

THE clocks for the new El Paso County court house, Colorado Springs, Col., have arrived and will be put in place as soon as the interior finishing of the rooms is completed. There are 10 clocks, which will be controlled by one main clock, of the product of the factory of the Johnson Service Co., Milwaukee, Wis.

These clocks cost the county $2,888. There will be one clock in the tower having four dials. Another large clock will be located in the main hall and the others will be distributed in the various court rooms and principal offices of the building.

ALVIN FLAT WARE.

MAJESTIC PATTERN.

A handsome, heavy-weight pattern, with flower ornamented handle.

Each size of spoon and fork is ornamented with a different flower, and yet the whole set harmonizes. This is one of our most successful and popular patterns, and is a ready seller.

ALVIN MANUFACTURING COMPANY,

54 MAIDEN LANE. NEW YORK. 41 UNION SQUARE.

An Important Feature.

An important feature of every Watch Case is a Dust Proof Pendant. If the jeweler will examine the construction of the one we illustrate, he will appreciate its value.

The cap screws over the pendant and the winding stem is adjusted in the cap, making it absolutely dust proof. All **Fahys** Screw Bezel Cases are made with dust proof pendants, such an essential feature in a Watch Case to those whose business exposes them to dust and moisture.

KEEP IT ALL.

Don't give up a part of it to the middleman, don't give up a part to pay the travelers' expenses. Keep *all* the profits yourself.

Besides the extra profits that you make when dealing with first hands, there is also the greater promptness and greater reliability.

We are *cutters* of Diamonds. We sell direct to the retailer. We have no traveling salesmen. We are satisfied with one profit, and that a reasonable one. The extra profits go to you. Anything purchased of us is always as represented. There is no equivocation; there is no salesman to blame it on the middleman, no middleman to blame it on the importer or cutter. When you go to the fountain head you get the best service and the lowest price.

When you want anything in our line send to us for a memorandum package.

J. R. WOOD & SONS,

DIAMOND CUTTERS.

The STANDARD

that we adhere to in the making of PLAIN, SOLID GOLD RINGS is the best that we can produce, and the best that we can make is the best that can be made. We have been making rings and studying ring making for over half a century, and the experience thus gained has resulted in the greatest economy of making and selling. This economy inures to your benefit, for we are thus able to sell the best rings at the lowest possible price.

We sell to you direct. *We have no salesmen.*

The Strength of a Chain

Foster's Strong Links.

Link the Fourth---Our Business Growth.

No house can build up a paying and lasting business by making goods that do not pay and do not last.

The single fact that Theodore W. Foster & Brother Company are in existence to-day after thirty years is proof positive that those thirty years have seen some pretty successful manufacturing.

There must be something about the chains and lockets that we make which appeals to the jeweler everywhere. If this is true, the same set of facts will appeal to the dealer who has not yet tried them.

If you have never sold or seen our Seamless Wire Chains and Gold-filled Lockets, you have something in the way of business yet coming to you. If you do know, you only need to be reminded that they have always proved good sellers.

Your nearest jobber carries them in stock. To make certain, always look for this trade-mark, which is the stamp of merit.

Sale of Clocks, Watches and Snuff Boxes in the Peter Marie Collection.

THE collection of cabinet gems, bronzes, porcelains, jewelry, watches and bric-à-brac belonging to the estate of the late Peter Marie, which was sold recently at the American Art Galleries, New York, was exceptionally interesting to jewelers. The glass ware, porcelains, china, vases and Dresden ware attracted some attention from jewelers, but not so much as some of the French clocks, with their accompanying candelabra, which are excellent specimens of last century's workmanship.

Among the cabinet articles are many snuff boxes with fine examples of French, German and Italian decoration. One square box, with mother-of-pearl inlaid with gold, bears an enamelled portrait of Madame de Pompadour, with a border of rose diamonds, and contains a secret panel with a miniature on ivory. Another fine box of carved gold, from the Walkouski collection of St. Petersburg, carries a large cameo, on which are depicted scenes in the life of Frederick the Great. A bag richly enamelled with views of the Rhine is the shape of another box. In the collection also is a beautiful jeweled box of German workmanship, with flowers and arabesques in colored gold and high relief and a miniature Dresden painting of the 18th century. A Dutch snuff box of curious design has an enamelled painting representing the destruction of Sodom. There were more than 50 of these boxes, all of excellent workmanship and of historic interest.

There were about 20 antique and modern watches, of which, perhaps, the most curious is a gold watch and chatelaine by Patro of Geneva, with an enamelled landscape on the interior, and a Dutch scene on the exterior of the case. A handsome repeater by Debaufré, of London, is literally set with rubies and diamonds. A chatelaine carrying three strands set with diamonds is also very handsome. Laline, of Paris, has a sample of his handiwork in the collection, in the shape of a curious modern watch, which contains various useful articles, such as scissors and knife, etc. A fine specimen of enamelling, which received a prize at the Paris exhibition of 1878, is a watch with transparent blue enamel, bearing the device, "*Par tout Amour—Amour par tout—Tout par Amour.*" The miniature painting on all of these watches is not more remarkable than the skill and taste with which they are enclustered with precious stones.

Of a score of ivory, mother-of-pearl, silk and lace fans, a number are exquisitely decorated with Watteau scenes. One bears a spirited picture of a garden party during the time of Louis XV. In the way of carvings there is a beautiful Japanese miniature two-fold screen of ivory inlaid in relief, with flowers in mother-of-pearl and coral, the color effect being unusual and very rich. Among the other interesting pieces in ivory is a triptych of the 18th century, carved with a scene of the marriage of Henry IV, and another carved with scenes from the life of Christ. Making up the collection also are a number of bonbonnieres of French and German origin, Japanese ivories, Dutch silver toys and other articles of various kinds.

THE FIRST STEP in right selling is right buying. THE FIRST PROFIT IN RETAILING is the saving by wise selection of stock.

OUR FIRST SERVICE to you is in placing at your disposal a stock containing in unequaled abundance the goods that best suit your resources and patronage.

OUR NEXT SERVICE is our experienced aid to you in identifying and selecting this most suitable stock.

OUR THIRD AND GREATEST SERVICE is the assurance you take away with you that you have "bought right"—that you have secured reliable goods that suit your trade and at the most favorable prices the market can furnish.

WE STEER YOU PAST MISTAKES in buying; we know you can rely on yourself in selling.

OUR DIAMOND AND WATCH STOCK for spring trade is the cream of the world's markets. To see it is an education that will profit you.

Consul Mansfield Reports on the Silver Trade of Chile.

WASHINGTON, D. C., April 8.—Consul Mansfield, at Valparaiso, Chile, has sent an interesting report to the State Department, in which he states that there is a very good market for and considerable trade in plated ware in Chile, but not much demand for solid silverware. Owing, however, to a financial depression which has affected every branch of trade throughout the Republic during the past year, the importations of plated ware are comparatively light at this time.

The commercial statistics for Chile for the year 1900, the latest available, show the following importations of plated ware into Chile: From the United States, 632 pounds; Germany, 388 pounds; France, 1,358 pounds; Great Britain, 1,370 pounds. In regard to customs valuation, France leads, with the United States second; Great Britain, third, and Germany, fourth. The French plated ware is not valued so much for its quality as for its excellent, artistic and elaborate designs, which make it attractive and to appear better than it really is.

The plated ware manufactured in the United States is well liked in Chile on account of its pretty designs, artistic patterns and excellent finish, but would meet with more popular favor and would have a larger sale if the white metal on which the plating is done were thicker and heavier, thereby making it more durable. The white metal used in the American ware is much thinner and lighter than that manufactured in Great Britain, and very often arrives in a dented and damaged condition, which deducts from its value, causes a considerable reduction in the selling price, and has a tendency to prejudice merchants and importers against American ware.

The British ware is of plainer design and pattern, but has a larger sale in the Chilean market than wares coming from other countries, owing to its durability, and would have even a larger sale if the patterns and designs were equal to those of the American and French silver and plated wares.

German plated ware is imported into the Chilean market chiefly on account of its cheapness, and not because of its durability or artistic merit.

The tariff of Chile provides that silver plate, gilt or not gilt, shall pay a duty of 35 per cent. on a valuation of $200 per kilogram, or the equivalent of $11.41, United States currency, per pound; plated ware, good quality, pays a duty of 35 per cent. on a valuation of $40 per kilogram, or the equivalent of $2.33, United States currency, per pound, while plated ware, medium quality, pays a duty of 35 per cent. on a valuation of $16 per kilogram, or the equivalent of 91 cents, United States currency, per pound.

There is no silver plated ware manufactured in Chile.

Consul Mansfield points out that great care should be exercised in packing silver and plated ware for shipment from the United States to Chile. Much complaint comes from merchants and importers in Valparaiso concerning the indifferent manner in which goods are packed by American exporters. In packing silver and plated ware each article should be wrapped separately in

cotton flannel, then well packed in wood-wool, and, if possible, each article should be placed in a cardboard box to prevent the possibility of damage by coming in contact with one another in the wood case.

New Vault of the Maiden Lane Safe Deposit Co. Completed.

The new deposit vault of the Maiden Lane Safe Deposit Co., 170 Broadway, New York, is now practically complete and ready for use. The vault is 16x18x9 2-3 feet and is fitted with 1,400 separate boxes, electric lights and all other modern conveniences. It is thoroughly ventilated and is the highest vault in New York. The door to the vault is fitted with a double combination time lock, which has a pneumatic pressure. Now that it is finished the temporary vault which has been in use will be turned into a storage room for trunks, packages of silver and samples of jewelry which come in too large bulk to be placed in the boxes of the new vault.

The company now has between 90 and 100 cards out in the jewelry trade, and members and boxholders are being added daily. The advantages which the company offers are just beginning to be appreciated by the out-of-town buyers and salesmen, and out of 1,600 cards and letters sent to jewelry houses throughout the United States, a number of favorable replies are coming in and the institution is expected to be well known to the trade at large within a few months.

As soon as it is discovered that a person in San Francisco, Texas and other distant points renting a box and enjoying the privileges offered by the company can ship a trunk, containing valuables, to the deposit vaults by express and have it received, checked and attended to without further bother, some of the advantages which the company offers will begin to be appreciated. This was recently done by a large buyer in San Francisco, and when this buyer left New York for the west, he was in too much of a hurry to attend to his trunk, but later sent word and had it come on by express. Buyers find it is much easier for them to have their trunks and samples go direct to the deposit vaults than to take them to a hotel. New York salesmen and jewelry dealers will also find the "bourse" of the company to be a convenient place in which to show samples to out-of-town buyers.

A man who gave his name as George Clark and who said he came from Scranton. Pa., was held for the Grand Jury by Recorder Stanton in Hoboken, N. J., recently, on a charge of larceny. The complainant in the case is Gustave Meiners, of Gustave Meiners & Son, retail jewelers at 306 Washington St., Hoboken, N. J. Clark entered the store and asked to look at some gold-rimmed spectacles. While the salesman was getting the tray of spectacles, Mr. Meiners, who was seated in front of a mirror, saw the man take a gold watch from the show case. The jeweler made no immediate sign of his discovery, but followed the man to the street and had him arrested just as he was entering a dry goods store. At police headquarters he was searched, but nothing was discovered until they looked in one of his socks. Clark appeared to be astonished when they found the watch there, and said that he did not know anything about it.

Tariff Decisions & Regulations.

The Board of Classification of the United States General Appraisers handed down a decision recently sustaining the protest of F. S. Garrish, New York, on an invoice of merchandise consisting of marble statuary assessed for duty at the rate of 50 per cent. ad valorem under Par. 115 of the Tariff Act of 1897, as "manufactures of marble not especially provided for."

The protestants claimed that the goods were dutiable at the rate of 15 per cent. ad valorem under the provisions of the Reciprocity Treaty with Italy.

REAPPRAISEMENTS.

The following were among the reappraisements of merchandise handed down last week by the Board of United States General Appraisers.

Manufactures metal and glass, from Geo. Borgfeldt & Co., Barmen, Jan. 28, 1903. Belt pin books, each 60, dull, No. 236; entered at 7 marks per 100 pieces. Discount 2 per cent. Add cases. No advance. Ditto, 228, bright; entered at 8 marks per gross. (Pin books.) Ditto, 229, mat; entered at 10 marks per gross. Ditto, 144, bright; entered at 6.80 marks per gross. Discount 2 per cent. Add case. No advance.

Manufactures horn, from A. S. Enyad Co., Paris, Feb. 12, 1903. 50 gross peignes; entered at 13 francs per gross, less 15 per cent., 2 per cent. and 2 per cent., advanced to 13 francs per gross, less 10 per cent. and 2 per cent. Case and packing included.

Jewerly, smokers' articles, etc., from L. S. Mayer, Frankfort, Jan. 20, 1903. 510-2,231, hat pins, gun metal; entered at 10.50 marks per dozen. 510-2,253, silver brooches, entered at 5.00 marks each. Ditto, 2,276, charms; entered at 5.50 marks each. Discounts, 20 per cent. and 3 per cent. No. 2,286, roses, gun metal; entered at 9 marks each. 2,289, cases, ditto; entered at 4 marks each. 2,288, ditto, ditto; entered at 11.20 marks each. Discounts, 10 per cent. and 3 per cent. Similar goods similar values. Add cases and packing. Advanced by addition of 5 per cent. commission added on invoice and deducted on entry.

Scientific instruments, from C. Reichert, Vienna, Sept. 30, 1902. Microscopes, III. B (1A), 25,669-25,697, triple nose pieces; entered at 185.10 crowns each. Ditto, ditto (2), 25,633, 25,663, 25,724, triple nose pieces, objective 3.7 A, 18 B, eye pieces, II, IV; entered at 263.50 crowns each. Microscopes (8), 26,166, 26,158, 26,212, 26,188, objective 3.7, eye pieces, 1; entered at 91 crowns each. Add packing. No advance.

Manufactures marble, from the Venice Art Co., Venice, Sept. 16, 1902. One stone well and stair of the same, entered at 1.10, advanced to 1.60 U. S. dollars for all.

Marble lions, entered at 1.30, advanced to 1.80 U. S. dollars for two. One stone statue, entered at 80 U. S. dollars. No advance. Two basins and vases, entered at 30, advanced to 40 U. S. dollars for two. Marble figures, entered at 3.50, advanced to 5.00 U. S. dollars for two. Add packing.

As a supplement to their regular catalogue, Swartchild & Co., 134 Wabash Ave., Chicago, have issued a 42-page book illustrating novelties and specialties in tools and appliances for watchmakers, jewelers and opticians. The book is of especial interest to watchmakers and repairers, as it shows many useful and practical appliances never before shown in this country. Requests for the book should specify Supplement E 3.

CHESTER H. WELLS, Jeweler, MESHOPPEN, PA.

Jewelry Thieves Captured, Tried and Sentenced Within Twelve Hours.

INDIANA, Pa., April 8.—Arrested, tried and sentenced within 12 hours was the rapidity with which justice was meted out to two young men who robbed the jewelry department of two stores here yesterday.

At an early hour yesterday morning William Moore and John, better known as "Yellow" Lydick, entered the stores of J. R. Stumpf & Son, Robert Milligan, Hetrick Bros., and Elmer W. Allison with skeleton keys made by Moore, who is an electrician. At each place a quantity of goods was secured, and when the thieves had concluded their night's work they carried with them many hundred dollars' worth of valuables. At the stores of J. R. Stumpf & Sons and Robert Milligan, the jewelry departments were plundered and a number of watches, gold pens and chains were taken.

The identity of the robbers was discovered through the finding of some gold pens and watches at the East End Hotel by the proprietor, F. I. Barn. Hearing a noise in his hostelry early yesterday morning, Mr. Barn, on going into the hallway, found several pieces of jewelry strewn on the floor. Later in the day he heard of the robberies having occurred during the night and notified the police of his find. The men were in their room at the hotel, and, in company with Policeman Harris, the proprietor aroused them.

Both were placed under arrest, and when the room was searched a large bag containing the booty was found. The men when taken entered a plea of guilty, and requested that Judge White give them an immediate trial. They were arraigned in court yesterday afternoon, and Judge White sentenced Moore to five years in the penitentiary and Lydick to five years in the Workhouse.

J. A. Floyd, Mattawa, has opened a branch store at New Liskeard, Ont.

W. G. Howe, Carlton Place, Ont., has sold out his business to J. H. Tucker.

George Warren has purchased a brick store and dwelling in Markham, Ont. Mr. Warren will greatly improve the property, which will be used as a jewelry store and residence.

George S. Sterling, who for some time was a traveler for the Crown Silver Plate Co., died April 2 at his home, 169 College St., Toronto, Ont. He was 60 years old and well known to the Canadian trade. He leaves a widow and a grown-up family.

Death of John Baum.

PITTSBURGH, Pa., April 8.—John Baum, formerly a jeweler in Philadelphia, and one of the best known residents of Mifflin County, died at the home of his daughter, Mrs. J. Wilson Rhoades, 7113 Kedron St., yesterday. He had been visiting in this city for five weeks, and was taken ill about a week ago. Physicians who were summoned pronounced his malady a severe attack of pneumonia, and from the time he was taken ill he failed rapidly until death came.

Mr. Baum was born in Philadelphia 77 years ago, and for many years was a jeweler in that place. He removed to Lewistown and went into politics, where he served in various Mifflin County offices. He was three terms County Register and Recorder and served one term as Clerk of Courts. He was for many years a member of State Capital Lodge, I.O.O.F., of Harrisburg, and also belonged to the Order of Red Men. He was a member of the St. John's Lutheran Church, of Lewistown, and is survived by his wife and two married daughters.

The remains were taken from this city to Lewistown for interment.

Sommerville Collection of Antique Gems Presented to University of Pennsylvania.

PHILADELPHIA, Pa., April 10.—The magnificent and remarkably comprehensive collection of gems, intaglios, cameos and objects of ancient glyptic art which has been on exhibition in the archaeological museum of the University of Pennsylvania, loaned by Prof. Maxwell Sommerville, a noted antiquarian, has been formally presented to the University by its collector, in fulfilment of a long cherished design. The deed of gift was executed Monday. Prof. Sommerville sailed yesterday from New York for Germany.

Many of the gems in the Sommerville collection have been from time to time described in THE CIRCULAR-WEEKLY. One of the most recent additions has been an antique paste reproduction of the famous Neptune cameo of the Hapsburg collection, the original of which is in the glyptic cabinet at Vienna. Two life-sized figures from Japan, "The Fruit Bearers," have just been received, and are to be installed at the entrance to the Buddhist Temple.

About $25 worth of stock was taken by thieves last week from the establishment of Fred Green, Buffalo, Minn. Wm. Crosby was subsequently arrested on suspicion.

Tiffany & Co. to Move.

Famous Jewelry Concern to Erect a Building at 37th St. and Fifth Ave., New York.

The house of Tiffany & Co. is to remove from Union Square, New York, to 5th Ave. and 36th St. This action, which has long been expected by the general public, was not decided upon until very recently by the concern, and was taken because of the encroachments of manufacturing and wholesale houses in the vicinity of Union Square, which make it disagreeable and annoying for patrons of the famous jewelry house; the removal is also necessitated for practical business reasons, the present establishment on Union Square being entirely too small for the proper transaction of the concern's business. A good many of the departments and branches which have been unable to be fully developed because of cramped facilities will receive a new impetus and growth when the house is finally located at its new premises.

Chas. T. Cook, president of the corporation, Thursday announced the purchase of a very large tract of land at the southeast corner of 37th St. and Fifth Ave., stating that the price paid for the land was more than $2,000,000. This is said to be the largest transaction in New York realty on record, where the purchase was not made by a syndicate. Speaking of this purchase, Thursday, Mr. Cook said:

"For the past eight or 10 years, the name of Tiffany & Co. has been linked with almost every parcel of Fifth Ave. realty that was on the market. Every Spring brought out a new crop of rumors of our contemplated removal, but in reality we had never given the subject any serious consideration, as our business kept growing more prosperous each year in the face of the uptown movement, while the last three years ending this month were by far the greatest in the 66 years' history of the house.

"It was only recently, when the encroachments of the manufacturing and wholesale houses in our vicinity took a more aggressive form, which brought with them so many features annoying to our patrons, that we concluded that a due regard for their comfort and convenience made it expedient for us to seek another site, which would also afford much needed room for the proper display of our wares and a general expansion and further development of the business.

"At present we have but 78 feet on Broadway; up on Fifth Ave. we have secured a frontage of 160 feet with a depth of over 150 feet. This will place us in a position to largely increase the capacity of the business and to concentrate and bring up to still greater efficiency many departments and branches of the business which are now more or less separated through lack of proper facilities."

It will be seen by this that the future site of the company contains more than double the area of the present store.

It is a coincidence that Mr. Cook, who consummated the purchase of the new site, accompanied the late Charles L. Tiffany when the present locality on Union Square was selected about 35 years ago. At that time, 1868, Union Square was an exclusively residential section. The old Church of the Puritans, which during the Civil War became famous through Dr. Cheever's fierce onslaught upon slavery, stood on this site when it was offered to Tiffany & Co. The conditions of the sale necessitated the purchase of the church with all its fittings, including organ, pews, etc.

The history of the house of Tiffany & Co. is so inseparably linked with the growth of the city and the continued uptown trend of retail business that it is of more than ordinary interest. In the course of its career, the house has occupied at one time or another sites on both sides of Broadway. The house was founded by the late Charles L. Tiffany in 1837; beginning in an extremely modest way, with a 15-foot front store at 259 Broadway. The total sales for the first three days amounted to only $4.98. By 1841 the business had grown so that Mr. Tiffany felt warranted in adding the adjoining store, 260, at the corner of Warren St. At the end of the first 10 years, 1847, the continued prosperity of the business led to its removal to 271 Broadway, corner of Chambers St.

In 1854 the house again found its premises inadequate, and removed to 550 Broadway. In 1861 it added the adjoining store, 552 Broadway, and in 1870 it took formal possession of its new building, on the corner of Union Square and 15th St., the first strictly fireproof building put up in this city, and has occupied it continuously during the last 33 years.

Unsuccessful Attempt to Pass Forged Check on J. Wetherell & Son.

PARKERSBURG, W. Va., April 8.—One of the two men who had been passing worthless checks on merchants in this vicinity recently attempted to get some goods from the firm of J. Wetherell & Son, jewelers, of 417 Market St., but was unsuccessful. The police have been looking for the men, but so far without success.

Saturday night a man called at the Wetherell store and attempted to buy some goods by offering in payment a check made out to T. C. Parkes, and signed with the name of Wm. Harrington, a prominent banker of Marietta. The check was on the German National Bank of Marietta. Before the goods were delivered to him the clerk went out to make inquiries about the check, whereupon the man left.

Some hours afterward the police were notified, and they arrested a young man answering the description given by the jewelers, but when he was taken into custody the employes of Mr. Wetherell could not identify him, and he was released.

Mr. Harrington, whose name was signed to the checks, arrived here Sunday, and declared the check to be a forgery. The police are still working on the case.

Thieves made a futile attempt to enter the store of Cary H. Cloud, Montpelier, Ind., a short time ago, and, after firing several pistol shots at a policeman who attempted to arrest them, escaped.

WHY DON'T YOU

Send your old gold, silver, sweeps and plated scraps to the refiner who makes a specialty of purchasing same?

There is a well-known maxim that "Experience makes perfect."

To accurately test and value a lot of old gold, etc., the requisite experience is absolutely necessary.

Being the largest buyers of old gold and silver in the country, and having the exclusive patronage of the majority of the jewelers in the United States and Canada, we can guarantee to the trade accuracy in valuation and **prompt and honest returns.**

OUR PLAN. Immediately upon receipt of consignment we will remit by cash or draft (as preferred). If our offer should prove unsatisfactory, we will return consignment intact and pay all charges. Make us a trial shipment, and you will ship again.

READ!! THIS WILL INTEREST YOU.

TESTIMONIALS FROM PLEASED CUSTOMERS:

Check received. Thank you for your promptness. The amount exceeded my expectations.
H. S. GIER, Pittsburg, Pa.

Your favor, enclosing draft, to hand. Many thanks. It was better than I expected.
E. A. SCHOBER, Pt. Townsend, Ind.

Check received. Am perfectly satisfied. You gave me all it was worth at the mint.
A. SIMON, Ft. Worth, Tex.

Received check for old gold. Am pleased to say it was more than I expected.
C. A. NOTBOHM, Oconomowoc, Wis.

I received your check and am well pleased, as it was more than I expected.
L. C. HODSKEY, Big Rapids, Mich.

Check at hand. Am well pleased as always. This time about $1.00 more than I expected.
H. WYKHUYSEN, Holland, Mich.

Draft received. Will ship you old gold and silver hereafter. I did not expect so much for the shipment. A. B. CORMAN, Chetopa, Kans.

Check received. More than I expected. Sent you a little shipment some time since which I had sent to another firm. Your check was a dollar more than their offer.
G. D. THOMAS, Kirksville, Mo.

Received your check for scraps, etc., sent you some days ago. Entirely satisfactory, more than I expected. O. M. NELSON, Madison, Wis.

Your check for gold sent you is O. K. The returns were very quick and the price the best we have had.
R. G. PIERCE JEWELRY CO., Barron, Wis.

Your remittance of recent date is satisfactory. Thanking you for prompt service, I am respectfully yours, J. C. DAVIS, Oelwein, Ia.

Your letter and draft were received. The draft is very satisfactory indeed. Many thanks.
GLOVER JOHNS, St. Louis, Mo.

Received your check for $74.80 in payment for old gold and silver. The same is perfectly satisfactory, as it has been in the past. Many thanks for same. Very truly,
CHAS. G. WILLIAMS, Reading, Pa.

Your immediate reply and estimate on old gold and silver is entirely satisfactory. We accept your enclosed check for same. Respectfully,
FORTE & FURNISS, Nashville, Mich.

Check at hand and very satisfactory, as your checks always are. My returns always fall short when sending to other people. Nearly exact when sent to you. Yours truly,
S. C. FRANTZ, De Graff, Ohio.

The Diamond Markets.

ANTWERP, March 27.—The market here has been very quiet, owing probably to the disappearance of a diamond merchant of Vienna, together with more than 500,000 francs worth of diamonds. Several firms of the place are creditors, most of them being Turks.

There is a small stock of rough here as regards cut diamonds. The great demand for large brilliants continues, while the sale of mêlée at present is not very brisk.

Several Americans were introduced into the "Diamant Club," last week, among them being Jul. Hebald, Mr. Rosenthal, Mr. Hoffmann, of Eichberg & Co., H. C. Hardy, Wm. N. Dreyfus, of Dreyfus & Mayer, B. F. Rees, of Zimmern, Rees & Co. There were also visiting here Mr. Strauss, of Frankfort-on-Main; Mr. Salter, Bucharest; Mr. Kohn, Vienna; Mr. Rollmann, Buda-Pest; Mr. Samiss, Athens, and Mr. Swartstein, Moscow.

A new firm has been established here under the style of Van Boghout & Van Lier, the partners of which are N. F. A. Van Boghout and G. Van Lier. They will engage in the diamond trade.

Salomon Folkowsky, an Austrian diamond merchant, who failed last year, has been assigned for the sitting of the Court on May 11, to answer to the charge of fraudulent bankruptcy.

The Court has rendered a final decree in an important matter involved in the several suits, in which 100,000 francs damages were asked from each of the defendants, for using a new machine to cut clean diamonds against the wax. Following the judgment of the public ministry, the Court declares that the Belgian "brevet" taken by the complainants in the suit has no validity, thus canceling the claim for damages. The defendants on their part asked for damages against the complainant for bringing an unlawful suit. The Court allows the defendants to continue the matter, in order to arrive at a settlement of the damages. This decision is discussed generally in the diamond industry here.

The erection of the statue of Lodewijk Bercken, the inventor of diamond polishing, will not be accomplished as soon as expected, because the committee in charge has ceased its work. It is, however, possible that a new effort will be made in the matter.

AMSTERDAM, March 26.—Business in the diamond trade is quiet these days, and merchants report trade to be slight. Stock in rough stones is very scarce and prices are firmer than ever. As to polished diamonds, fine qualities are not available, and where they exist the prices are exceedingly high. The supply of lower grades is better, but there is no sale for them. There is a brisk demand for bort, the value of which is on the increase.

LONDON, March 26.—The great event discussed in the London diamond trade is the recent rise of 5 per cent. on all rough diamonds, both large and small grades. This rise was anticipated, but not expected to take effect so soon. It is now certain that it will not be the last this year.

Mr. Goldberg returned last week from the Continent, after purchasing several lots of brilliants in Antwerp.

Pearls are very scarce in this market, which fact adds to the difficulty of getting these gems at favorable prices.

PARIS, March 27.—The recent dullness in the trade here has been succeeded by a livelier market. A number of foreign buyers were here and several lots of brilliants and roses were sold. A good demand for rubies is observed. The clear weather has aided merchants in doing business, and visitors are beginning to arrive from all parts of the world.

Messrs. Mayer Bros., A. von Moppes and Armand Levy have been in Antwerp, but whether or not they made purchases is not known.

A syndicate has been formed here to buy bort, the members of which are all merchants of Paris: Messrs. Block, Sr., G. Aron, Asscher Bros., Eschweige and Mund.

Chas. H. Gould, Northampton, Mass., has purchased a new residence on Ward Ave.

Career of the Late Samuel Chapin.

ONEIDA, N. Y., April 9.—The funeral of Samuel Chapin, Sr., of S. Chapin & Son, was held from his home on Stone St. yesterday afternoon at 2 o'clock. Rev. Dr. S. Jessup officiated and there was a large number of friends in attendance.

Mr. Chapin was in his 97th year, and was Oneida's first jeweler and oldest merchant. He was born on a farm near Ballston Spa, his father, Rufus, being a pioneer there. Rufus Chapin was born and reared in Massachusetts, where he married Miss Polly Tobey. He was a carpenter and cabinet maker by trade, but in 1813 he removed, with his family, to Nelson, Madison County, where he purchased 100 acres of land, which he tilled until the death of his wife, when he moved to Morrisville. He died there in his 84th year.

Samuel Chapin, Sr., worked on the farm until he was 16 years old, when he entered a carriage shop at Oneida Castle. He had an aptitude for mechanics, and soon began to repair watches. It was then that the germs of genius, so manifest in his after life, were fostered and developed. In 1830 he opened a jewelry store in Vernon, and Dec. 7, 1848, he opened the first jewelry store in Oneida on the site of the Garvin block on Madison St. Later he conducted a store in a frame building where W. E. Douglass is now located. In 1850 Mr. Chapin removed to the first brick store in the town, where Chapin Bros. are now located. In that year he moved his family to Oneida and soon afterward gave up his Vernon store. In 1862, Mr. Chapin and his son, Samuel Chapin, Jr., erected the building now occupied by S. Chapin & Son on Main St.

The marriage of Mr. Chapin, Sr., to Fannie Sage, the eldest sister of Russell Sage, took place in 1830. Miss Sage was born in Hartford, Conn., and still survives. Her father was a shoe manufacturer, and he moved to Verona, where he died. Mr. and Mrs. Chapin had 12 children, 10 of whom are still living. Charles died in infancy, and Henry died in 1865, aged 23 years. Samuel, Jr., Helen, Dwight, Mrs. Angeline Lyle, Mrs. Maria J. Munroe, relict of the late Ivers Munroe; Francis W., Homer E., Taylor and Fremont all reside in this city. The other son, Earl, lives in Milwaukee, Wis.

The deceased was a man of great mental activity, and he imparted to his children many of the characteristics which were synonymous with his long and noble life. His memory was exceptionally keen. In fact, so much so that during his declining years he could relate events of his boyhood days with wonderful precision. He took great pride in his family, all of whom are ranked among Oneida's most prominent residents.

Mr. Chapin's politics in early life were plainly Whig, but he joined the Republican party at its organization in 1856, and during his entire life was one of its staunch supporters. While in Vernon he acted as leader of the Baptist choir, being a member of that church. He enjoyed the sincere esteem and respect of all who knew him and in his death Oneida loses one of its leading citizens.

Louisville Jewelry Firm Arranges to Pay Creditors in Full.

LOUISVILLE, Ky., April 9.—Reports to the effect that the house of Geo. Wolf & Co., conducting a jewelry business at 4th and Jefferson Sts., this city, was in financial difficulties are incorrect, but are probably founded upon the fact that the concern has just made an arrangement with its creditors, through the Jewelers Association and Board of Trade of New York, by which an extension is granted for a period extending to August, 1904.

The business is owned by Mary F. Wolf, the widow of the late Geo. Wolf, who founded it in 1871. Recently the concern has been somewhat pressed for ready cash, and an arrangement was made through the Jewelers Association and Board of Trade by which the house agreed to pay creditors in full, 10 per cent. on August 1, 10 per cent. November 1, 20 per cent. January 1, 1904, and 10 per cent. each month, except July, until August, 1904.

The assets of the concern are given as $51,472, and the liabilities as $25,851.

Extensive improvements are being made in the establishment of the Goldstein-Weisser Jewelry Co., Peoria, Ill. The interior is being thoroughly renovated and a new front will also be added.

The burglar who recently entered the store of Geo. L. McCloskey, Renova, Pa., has been captured and recognized as one Harry William. Mr. McCloskey has identified a stolen revolver found in William's possession.

Values Ancient and Modern

LEATHER was formerly used as a standard of measurement, the ancient chronicler Bede speaking of certain tracts as so many "hides of land." So valued was Ivory that of it were made the face, neck, arms, hands and feet of the statue of the goddess Athena in the Parthenon. Ebony was held in high esteem, and Egyptian tombs bear representations of Ethiopians bringing as tribute the trunks of ebony trees. The turtle was greatly venerated, owing to the belief that the world rested on the back of one. Even in this practical age the products of leather, ivory, ebony and tortoise shell continue to be most highly valued; and the best of such articles for jewelers are made by

Incorporation of the American Gem and Pearl Co.

The American Gem & Pearl Co. was incorporated at Albany, Wednesday, with a capital of $150,000. The incorporators are Louis Kahn, of L. & M. Kahn & Co., M. D. Rothschild, who for many years was in the precious stone business at 41 Maiden Lane, and for the past six years has been a practicing lawyer, and A. A. Kahn, nephew of Louis Kahn. This company will purchase and take over the goodwill and assets of the American Gem Co., which was incorporated at Albany in 1900 with a capital of $25,000. The new concern, under the leadership of Mr. Rothschild as president, Louis Kahn as vice-president, and A. A. Kahn as secretary and treasurer, will continue the business of the old corporation on a larger scale.

The object of the new company will be to cut all varieties of precious and semi-precious stones except diamonds, to mine these stones on its own account and to encourage mining by others, handling the entire product of such mines. Mr. Rothschild will go abroad about April 30, and will remain in Europe several months making purchases of rough precious stones.

The offices of the company for the present will be those formerly occupied by the American Gem Co., 16 Church St., New York. Besides the officers, the other directors in the company are Lucien M. Zell and Joseph Lichtenauer. Mr. Zell will have the entire management of the cutting plant.

Boston Legislature Considering Bill Against Trading Stamps.

Boston, Mass., April 11.—In the House of Representatives Wednesday a bill relative to the distribution of trading stamps was reported from the joint committee on the judiciary, entitled "An Act to Prohibit the Sale or Distribution of Trading Stamps, Checks, Coupons or Similar Devices." The bill is a redraft of three bills presented to the joint committee, and reads as follows:

Section 1. No person, firm or corporation shall, in connection with the sale of any article or any merchandise whatsoever, sell, give or deliver any trading stamps, checks, coupons or similar devices to be exchanged for, or to be redeemed by the giving of, any indefinite or undescribed article, the nature and value of which are not stated, or to be exchanged for, or to be redeemed by the giving of, any article not distinctly bargained for at the time when such trading stamps or other devices as aforesaid were sold, given or delivered.

Sec. 2. Whoever violates any provision of this act shall for each offence pay a fine of not less than $10 nor more than $50.

It is thought that there will be a good hot fight on the bill and already the "third house" men are preparing to see that its path will not be strewn with roses.

J. Wilber Jones, Ligonier, Pa., has moved into new quarters on Church St.

The stock of Paul Satz, Ware, Mass., who filed a petition in bankruptcy a short time ago, was appraised last week by E. D. Howard, A. L. Willard and A. L. Hayden. Attorneys H. P. Field and H. M. Coney were present, representing the creditors, and John Schoonmaker appeared in the interest of Mr. Satz.

Concerning the Money Making End of Your Business

The only kind of goods it really pays to carry are good selling goods.

In some lines it's pretty hard to judge what the good sellers are. In the chain line however it's quite simple.

SIMMONS CHAINS are unquestionably the best sellers simply because they are the best made and the widest advertised. Simmons Chains are pretty well known in every town and city in the country.

They are known in your place and there's no reason why you individually couldn't sell considerably more of them if you only let people know you carried them.

Why not display them in your windows now and then and send to your customers some of the handsome chain booklets we will supply you free for the asking?

Try it. As Colonel Sellers puts it: "There's millions in it."

R. F. Simmons Company, Attleboro, Massachusetts.

Geo. A. Collins, Salem, Mass., Makes an Assignment.

SALEM, Mass., April 9.—Geo. A. Collins, a jeweler of this city, whose store is at 198 Essex St., has made an assignment. No statement as to his assets and liabilities has been made public.

Mr. Collins has been in the jewelry business for many years, having started at Beverly, Mass., in 1875. For over 20 years he conducted business in this city alone and under the style of Geo. A. Collins & Co., in which firm he was associated with his brother, Chas. F. Collins.

BOSTON, Mass., April 11.—There has been considerable comment and surprise among the members of the trade in this city over the assignment made Thursday by George A. Collins, of Salem. Mr. Collins has been in business in Salem for a number of years and about six months ago opened a new store in the same city. The latter was placed in charge of his son.

On account of previous troubles Mr. Collins has been obliged to conduct his business in many cases on a C. O. D. basis, but the liabilities in the recent assignment case are said to be about $45,000. This includes merchandise to the amount of $25,000 and borrowed money to the amount of $20,000. The assignees are Daniel N. Crowley, of Salem, an attorney, and William S. Nichols, treasurer of the Salem Safe Deposit and Trust Co. The assignment is made to cover both stores.

An attempt was made, it is said, to hold the son partly liable on the ground that he had charge of the new store, but it was learned that he was employed merely as a clerk at a salary of $10 a week and was in no way to be held responsible for the debts of the concern.

The opinion seems to be general that the assignment will be thoroughly investigated and the whole matter, particularly the facts as to the $20,000 borrowed money designated as part of the liabilities, is likely to be gone into by the creditors.

"I speak not to disprove what Brutus spoke."

WHITE HCUSE,
Washington, Feb 28, 1902.

Gentlemen: I return herewith the chain bracelet, and regret to say that in view cf the innumerable requests received for permission to name various articles after Miss Roosevelt, she has had to make it an invariable rule not to consent to the use of her name in any case.

Thanking you for your courtesy; I am,
Very truly yours,
(Signed) WM. LOEB, JR.
Assistant Secretary
to the President.

J. J. Sommer & Co.,
N. Attleboro, Mass.

Immediately after the presentation of The Kaiser's bracelet to Miss Alice Roosevelt by Prince Henry in *February, 1902,* we produced duplicates of the bracelet, the first, by many months, to appear on the market, and applied for permission to use the name "Alice Roosevelt." The above letter was in reply to our request. We would not, in deference to the President's wishes, use his daughter's name without permission.

"EHRLICH WAEHRT AM LAENGSTEN."

Our 2-Picture Locket and Secret Joint Bracelets
in Solid Gold, 1-10 Gold and Sterling Silver

Proposed Stamping Law.

New York Legislature May Pass Bostwick Bill, While Rosenstein Bill Appears to Have Been Killed.

ALBANY, N. Y., April 10.—It begins to look as if the bill introduced in the Assembly by Mr. Rosenstein, requiring all articles of jewelry to be stamped by the manufacturer, will be killed in committee. After its introduction it was referred to the Codes Committee, where, as yet, it has failed to receive any consideration. This committee held its last meeting last week and it was necessary to transfer the bill to the Rules Committee. The latter at present has an immense amount of work on hand and it is extremely doubtful that the Rosenstein bill will be reached before it is time for the dissolution of the Legislature.

However, the failure of the Rosenstein bill to get a hearing will not prevent the present Legislature from enacting legislation in regard to gold stamping. Assemblyman Bostwick's bill, which requires all articles manufactured of gold to be of the quality of the stamp which they bear, will come up in the Assembly next week and will undoubtedly be passed. The manufacturers, dealers and all others interested in its passage and who have worked hard to attain their ends have as yet met with no serious opposition and there seems to be none in sight. The bill is scheduled for a roll call this week and the ayes will undoubtedly be in the majority.

Another bill of interest to jewelry manufacturers and dealers, in that it affects the sale of their products, will probably die. It is the Assembly bill introduced by Mr. Ullman prohibiting the giving away of coupons redeemable in jewelry and other articles by manufacturers of cigarettes, cigars, tobacco, etc. The bill will die in committee and not be considered by the members of the lower House.

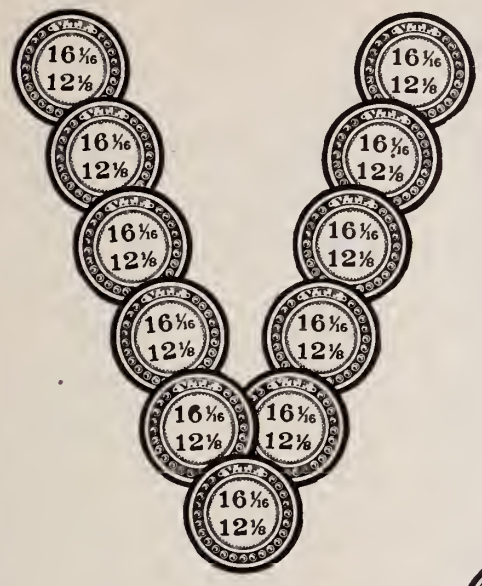
Involuntary Petition in Bankruptcy Filed Against Louis Berney.

An involuntary petition in bankruptcy was filed in the United States District Court Wednesday against Louis Berney, a dealer in diamonds at 51 Maiden Lane, New York. The petitioners were: Abraham Shapiro, $500; Gustave Goldwasser, $501, and David Mayer, $417. It is alleged by these petitioners that Berney is insolvent; that he has transferred a part of his property with intent to hinder and delay his creditors, and that he has transferred certain property to other creditors and has made payments while insolvent. The petition declares that his liabilities are in the neighborhood of $28,000.

Mr. Berney recently offered to compromise with his creditors on the basis of 33 cents on the dollar, but was not successful in getting his creditors to accept this settlement. As stated in the last issue of THE CIRCULAR-WEEKLY, Mr. Berney was arrested April 4 in a civil suit brought by Leopold Spitzel & Bros., 51 Maiden Lane, for failure to account for $3,000 worth of diamonds, which they claim he had obtained on memorandum and had not returned or paid for. Mr. Berney was released from Ludlow Street Jail after furnishing bail of $3,000.

Mr. Berney has been known to the trade of New York city for 10 or 12 years. At first he was a ring manufacturer at 81 Nassau St., then at 416 Broadway, and still later at 203 Madison St. He engaged in the present line about four or five years ago, and at first did a very extensive business, handling large quantities of diamonds. Lately his trade fell off, and Mr. Berney claimed that this was due to the fact that he was devoting more of his attention to real estate and other matters.

In order to get rid of several old judgments standing against him he went into bankruptcy in April, 1899, and obtained a discharge of his debts.



Harry A. Brodkey, Sioux City, Ia., Makes an Assignment.

SIOUX CITY, Ia., April 8.—Harry A. Brodkey, a retail jeweler at 808 4th St., made an assignment Monday for the benefit of his creditors. The deed names as assignee Chas. Eiseman, who has taken charge of the business and is making an inventory.

An exact statement of the liabilities and assets is not yet available, but Mr. Brodkey places the former at $1,554.62 and believes that his assets will reach about $800. Mr. Brodkey has been in business here about a year, and his failure was unexpected.

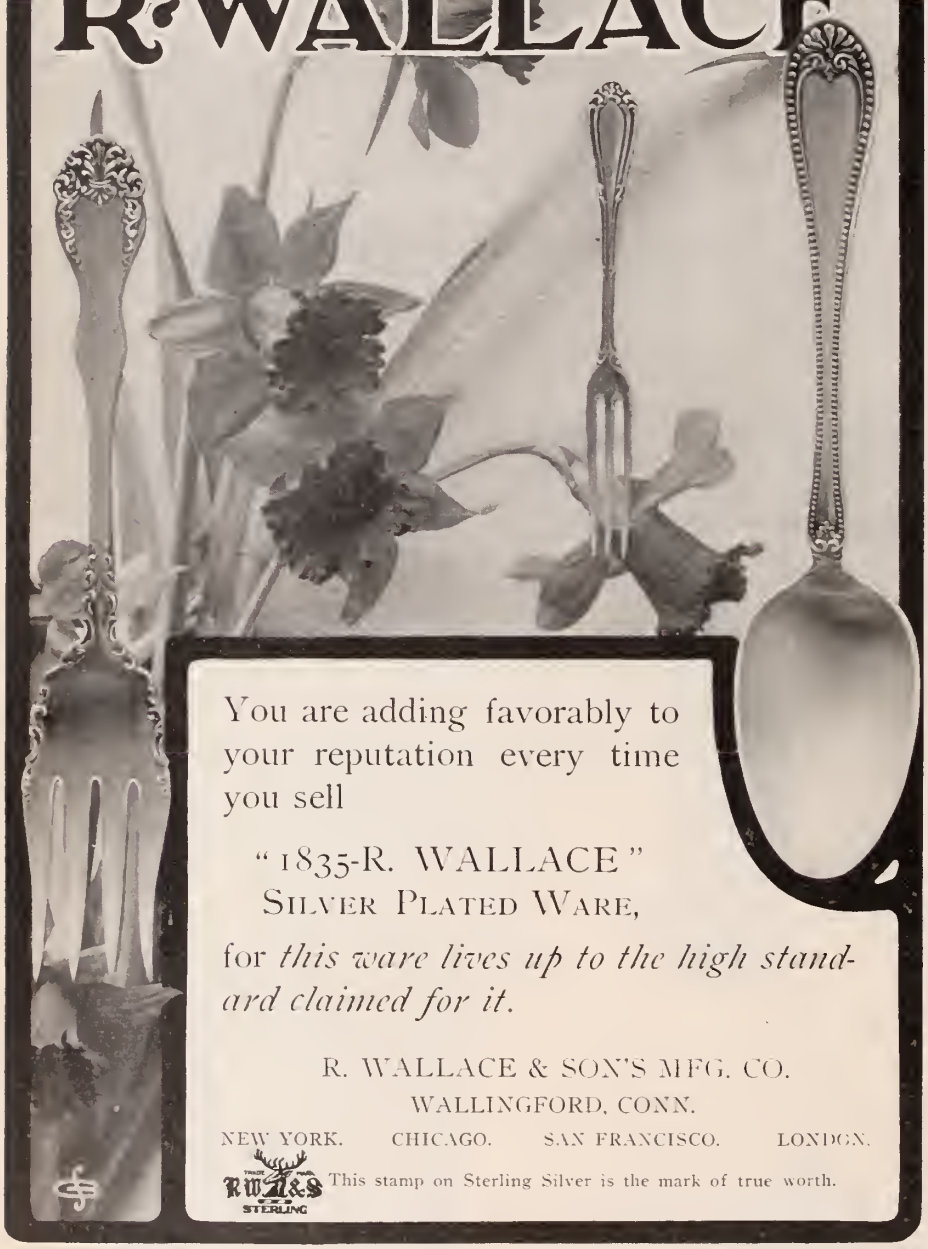
Stanley D. McPherron, Greenfield, Ill., has moved his stock into larger quarters in the Collins building.

THE BEST IS ALWAYS THE CHEAPEST; THIS applies to Watch Glasses as well as to anything.

The best Watch Glasses are those that are carefully made, from the proper stock, properly labeled and correctly gauged.

The CHEAPEST Watch Glasses are those which require the least time to fit, and in which there is the least percentage of breakage.

The **V. T. F.** Glasses combine all of these cardinal qualities and BEAR THIS LABEL:



Insist upon getting the **V. T. F.** and take no other.

N. B. — See that each Geneva Glass is wrapped separately in tissue paper, and this paper stamped with the size of the glass, and **V. T. F.**

Lemaire Concern of Paris Sues the Siegel-Cooper Co. for Selling Glasses Marked "Lamier."

A suit was begun in the United States District Court at New York last week by Jean Baptiste Baille and Louise Armand Baille, proprietors of the original Lemaire opera glass concern of Paris, France, against the Siegel-Cooper Co., of New York, to restrain them from the use of the word "Lamier" and the figure of a bee on goods not originally manufactured by the Paris house. The complainants also ask for an accounting of damages sustained by the alleged illegal use of the word and figure claimed as their trade-mark, and for a preliminary injunction pending the trial of the suit.

According to the complaint, the business of the Paris house was established in 1847 by A. Lemaire and the word "Lemaire" was used by him on all of his opera, marine and field glasses. This word or trade name, the complainant states, is used by the trade and public throughout the United States to distinguish and identify a glass or optical instruments manufactured by the Lemaire house. In 1870, according to the complaint, Mr. Lemaire, when his daughter married, executed a contract whereby, on his death, Jean Baptiste Baille, his son-in-law, would become entitled to share his business. In 1885 he died, and, according to the terms of the contract, Mr. Baille fell heir to the business which he had built up.

Speaking of the figure of the bee which is invariably on the eyepiece of opera, marine and field glasses manufactured by the original Lemaire concern, the complainants state that the exclusive use of this figure must be allowed them under the provisions of Article VIII of the Treaty with France, which was proclaimed by the President of the United States, June 11, 1887. This article reads: "The commercial name will be protected in all the countries of the Union without obligation or deposit, whether it forms part or not of the commercial mark."

The complaint, after citing these facts, states that the defendants, the Siegel-Cooper Co., have been selling optical, marine and field glasses stamped with the word "Lamier" and the figure of a bee, which were not manufactured by the original Lemaire concern, and which were infringements of the trade name "Lemaire." By the sale of these goods, the complainants claim, the Paris house has been injured very considerably in New York and the United States, both by a decrease in its sales and by the introduction into the market of an inferior quality of goods stamped with a name very similar to that which had hitherto stood for excellence and good quality. They declare that the general public was deceived by buying goods so marked, inasmuch as purchasers believed that they were buying genuine "Lemaire" glasses. The complaint alleges that at least $5,000 had been diverted to the defendant from sales of these glasses, and asks for an accounting of the sales of the defendant as soon as possible.

The argument on the motion for a preliminary injunction will take place in the United States Circuit Court within a week or so.

Harry P. Utz., Hanover, Pa., has purchased the business of C. H. Kaiser, of that place.

"ONEIDA COMMUNITY QUALITY"

is not a mere phrase but a new and positive value which appeals strongly to your self interest. Ask for "SILVERWARE PHILOSOPHY" explaining it.

ONEIDA COMMUNITY, Niagara Falls, N. Y.

Fight Against Increase in Canadian Jewelry Tariff Begun by Attleboro Manufacturers.

ATTLEBORO, Mass., April 13.—The battle of the Attleboro Jewelers' Tariff Committee against the present Canadian agitation in favor of increased import duty on American jewelry and kindred articles is in full swing. President Bigney, of the Tariff Committee, left last week for New Orleans, to enlist the aid and sympathy of the National Manufacturers' Association on the side of the jewelers.

The belief is unanimously entertained here that if the present agitation leads to a raise in the present 33⅓ per cent. duty on jewelry going into the Dominion, then the American jewelers will all lose a very valuable market. As in the case of the Dingley bill and the French Reciprocity Treaty, both of which in their inception threatened trouble for the whole industry, it has remained for the Attleboro men to be the first to scent danger, and openly take up the cudgels.

It has been known for a fortnight that the Attleboro Tariff Committee proposed to gather a collection of facts and figures and have them published in Canada to offset the present movement, believing that a campaign of education will produce the best and most permanent results with the dissatisfied Canadian business men.

The opening gun of this campaign was fired when President Bigney delivered an address on the situation before the members of Company C Association, the leading club in town, whose membership is almost exclusively the jewelry manufacturers and their leading employes.

The address was intended as a general summary of the whole matter, and a reply to the published statements of the Canadian high-tariff agitators.

Joseph Hooker, Accused of Arson, Convicted of Minor Charge.

BALTIMORE, Md., April 12.—A verdict of guilty on the fourth count in the indictment against Joseph Hooker, charged with setting fire to his jewelry store in Frederick, was reached April 6 at Ellicott City. This is the lightest form of the offense alleged and amounts practically to a misdemeanor, punishable by fine or imprisonment.

In the indictment originally returned there were eight counts, four of which were pronounced bad by the court and thrown out. The jury was divided on the question of the guilt or innocence and the verdict was a compromise. Hooker's partner, Fehl, is yet to be tried.

Hooker filed a motion for a new trial, April 7, but the court overruled it, and he was sentenced to the House of Correction for two years. An appeal was then taken, the accused giving cash security for $1,000.

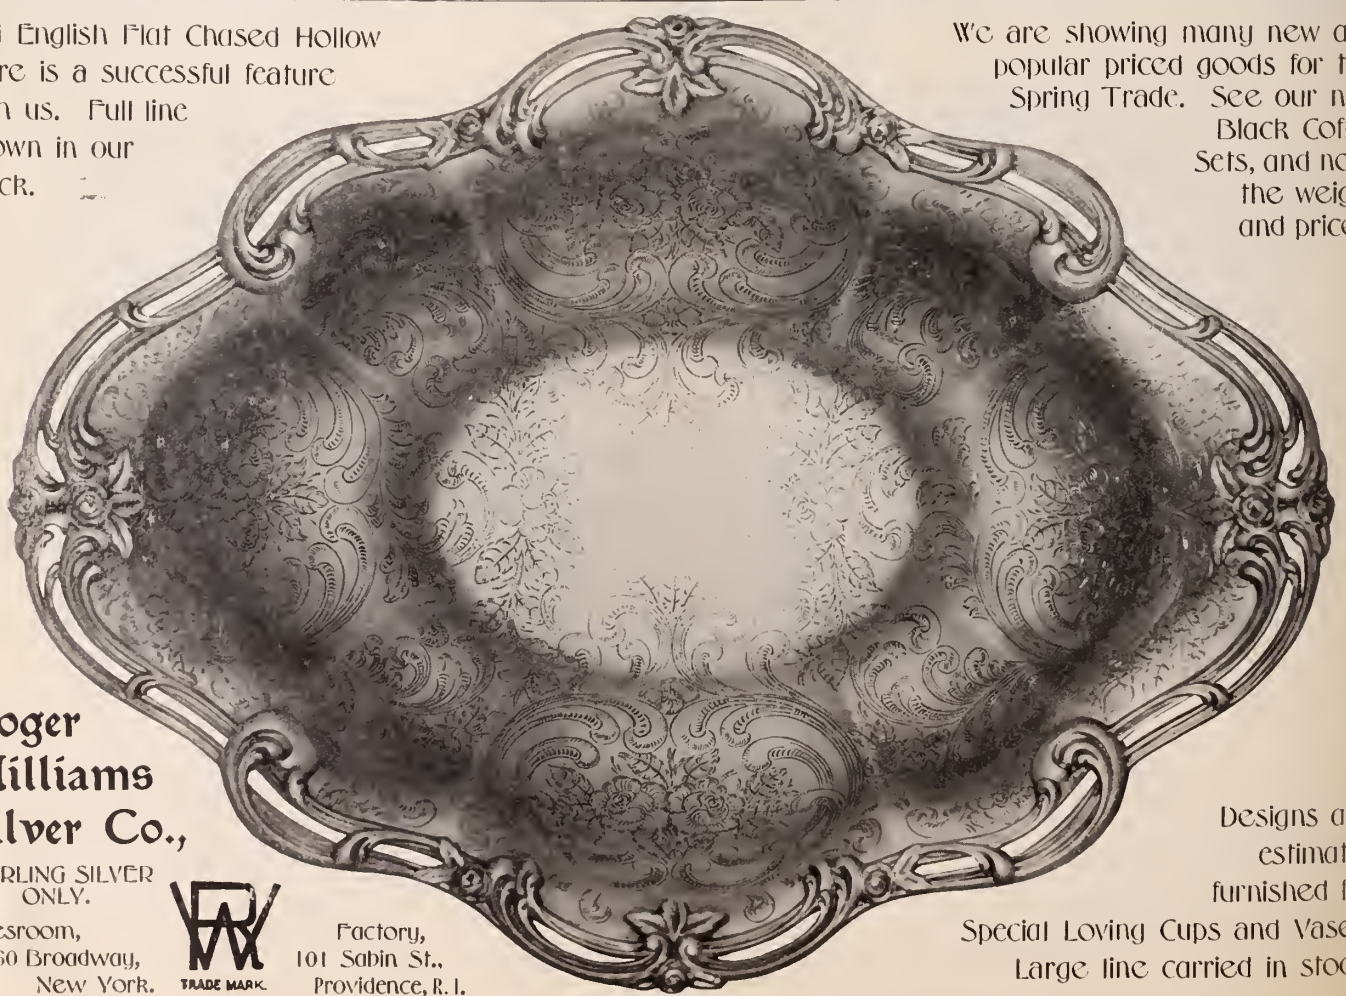
F. E. Brown, Prospect, O., is now located in the rooms above the Citizens' Bank at that place.

A representative of Becker & Wilson, cut glass manufacturers, Brooklyn, N. Y., recently visited Harrisburg, Pa., where he was seeking a desirable location for a cut glass factory.

First Meeting of the Jewelers' Club of Chicago.

CHICAGO, April 10.—At the first annual meeting of the Jewelers' Club of Chicago, which was held in Room 407, Masonic Temple, Tuesday evening, April 7, H. S. Hyman, who had been appointed president *pro tem.* at a previous meeting, declined to accept the nomination for that office. E. L. Humphrey received the nomination and was elected.

The following is the full ticket selected: President, E. L. Humphrey, of Hyman, Berg & Co.; vice-president, Ernest Lunt, manager of the Towle Mfg. Co.; secretary, Thomas Rudd, of Charles E. Graves & Co.; treasurer, Benj. F. Coffin, with Spaulding & Co. Directors—A. H. Wittstein, of the Schrader-Wittstein Co.; Harry Hahn, of H. E. Hahn & Co., and Benjamin Engelhard.



A motion was made and carried that the present constitution be ratified and remain the constitution of the club until such time as the board of directors could formulate and present a more complete constitution. It was also decided that the secretary secure a charter for the club.

About 60 members were present at the meeting, and after indulging in an informal talk on the advancement of the interests of the club, the members adjourned until the next regular monthly meeting, which will be held on the first Tuesday in May. The club now has 235 members.

The Beehive Jewelry Co., Wilkes Barre, Pa., has opened its new jewelry establishment at 5 Public Square with a large and varied stock.

Designs and estimates furnished for Special Loving Cups and Vases. Large line carried in stock.

Creditors in Control of the Business of Rudolph Barth.

San Francisco, Cal., April 8.—Rudolph Barth's jewelry business at 141 Post St. is now in the control of his creditors and Leon Nordman, of the wholesale firm of Nordman Bros., 134 Sutter St., has taken charge of the store and will act as custodian for the creditors.

Mr. Barth has given an absolute bill of sale to Mr. Nordman for the entire stock of jewelry, this arrangement having been decided upon by the creditors as the best means of settling up the disordered affairs of the business. An inventory is now being taken and Mr. Nordman states that he thinks there is enough stock in the store to pay all the creditors in full.

The attachment was placed on the stock at the instance of M. L. Levy & Co., wholesale jewelers at 112 Kearny St., to cover a claim for $176.05. The amount of Mr. Barth's liabilities are now placed at $4,500, due local business men, besides a few eastern creditors, whose claims have not yet been ascertained. The assets are expected to amount to something like $8,000. Rothschild & Hadenfeldt are the principal local creditors.

Bad business management is given as the reason and cause of Mr. Barth's financial troubles. After the affairs of the store have been straightened out, the business will again be turned over to Mr. Barth's control, and pending this straightening out process Mr. Nordman will act as trustee, that the business may be arranged at a nominal cost.

Hearing on Bill to Abolish Body Executions in Suits for Instalment Debts.

Albany, N. Y., April 8.—Governor Odell yesterday gave a hearing on the bill introduced by Senator Elsberg, which has passed both houses, and provides that no body execution shall be issued against a person in an action for conversion of goods purchased on instalments where the property in dispute is less than $100.

Senator Elsberg spoke in favor of his bill, telling how it was drawn to prevent abuses by instalment dealers who put people in jail to force payment of instalments, while the delegation in opposition to the bill was headed by Abraham Gruber and Assemblyman Cohn, who contended that the bill should not be passed. Gov. Odell took no action.

THIS WEEK—16,000 JEWELERS

WHO ARE NOT SUPPLIED WITH "1847 ROGERS BROS." GOODS DIRECT FROM FACTORY WILL RECEIVE ONE OF THESE CARDS, PRINTED IN TWO COLORS:—

THESE SPOONS

show a few of the leading patterns in the best known make of silver plate in the world. Forks, knives and fancy pieces are also made to match.

THE QUALITY

of this brand is unrivaled, and from its lasting worth has long been known as "*Silver Plate that Wears.*" The genuine bears the complete trade-mark.

This make has been on the market for nearly sixty years, steadily gaining in the character of designs, finish and general popularity, but best of all the good old "Rogers" quality, first exhibited by this brand, has been maintained, and has made the

"1847 ROGERS BROS."

the most famous of all silverware. Sold by leading dealers everywhere. Your jobber can furnish you with prices and full particulars.

Made by **MERIDEN BRITANNIA CO.** (International Silver Company, Successor) **Meriden, Conn.**

This card is the FIFTH of a series of twelve—SEVEN to follow—one each week.

EVERY LEADING JOBBER

Should be able to supply the demand, but an order placed in advance of immediate requirements will be advisable.

Providence.

The Colvin Mfg. Co. is now located on the fifth floor of the Champlin building, 116 Chestnut St.

The Manufacturers' Supply Co. is the firm style of a concern recently incorporated. The incorporators are Clifford G. King, Henry C. Hofman and George D. King.

Ralph Hamilton, of Hamilton & Hamilton, Jr., who has been spending two months on a trip to Florida, returned last week. Mr. Hamilton visited all the resorts along the Florida coast, from St. Augustine to Miami, and also stopped at Havana, Cuba.

It was announced last week that Thomas Willis, a well-known engraver and dye cutter, had decided to withdraw from business owing to trouble with his eyes. Mr. Willis will hereafter be identified with a real estate enterprise. He has been in the building at Page and Friendship Sts. for 31 years.

Among the pall bearers at the funeral of Stillman White were John M. Buffinton and Thomas F. Arnold. Mr. White was one of the best known men in the city and had built up a very important brass foundry establishment in this city. He had held many offices of public trust and had an enviable reputation.

The Manufacturers' Tournament among the bowlers has terminated and the Dovers stand at the top. The Dovers won 34 and lost 11. Their pin totals were 18,478 and the average per game 410. The Ostby & Barton quintet finished in fifth place. They won 15 and lost 27. Their pin totals were 16,528 and their average per game 393.

The coal teamsters continued to remain "out" last week, and as a result the manufacturers were considerably inconvenienced, inasmuch as they were unable to secure coal readily. Mr. Reynolds, of Cory & Reynolds, caused considerable comment by driving a load of coal to his establishment in South Providence. The load was drawn by one of the Eastern Coal Co.'s teams and Mr. Reynolds proved himself an efficient "whip." Many favorable comments were heard along the line as he went to the factory.

Articles of incorporation of the Potter & Buffinton Co. were filed at the office of the Secretary of State last week. The concern is formed for the purpose of engaging in the manufacture of jewelry and for the transaction of such other business as may arise in connection therewith or is incidental thereto. The incorporators are John M. Buffinton, Reuben Maron and Edgar A. Woodmancy. The amount of capital stock is $250,000. The incorporation of this well-known establishment follows the death of Col. Isaac Potter, which occurred not long ago.

The man said to be William White, alias Devlin, a much-wanted crook, who was brought on from New York to answer to two indictments before Judge Wilbur in the Common Pleas Division, pleaded not guilty to both and bail was fixed at $2,500 in each case. White was unable to furnish the $5,000 and was committed awaiting a hearing. The two indictments charge that on Aug. 5, 1902, White stole a gold watch case worth $31 from the Albert Walker Co. and that on the same day he took bronzes from the Tilden, Thurber Co., valued at $148.50. White is also wanted by the Washington, D. C., authorities for the larceny of a tray of diamonds worth $13,000 from Gerome Desio in 1897.

Plainville.

John L. Thompson, of Thompson & Remington, is the proud father of twin daughters, born last week. He is passing a choice brand of Havanas.

Frank Maintien, of Maintien Bros. & Elliott, had the misfortune to cut his hand severely with an axe last week. He severed the tendons and arteries in the back of his right hand and six stitches were required to close the wound.

W. F. Maintien, of Maintien Bros. & Elliott, received many compliments on the work at the last session of Bristol Lodge, F. and A. M., of which he is worshipful master. It was the first exemplification since he had been installed.

Wm. B. Joseph, Hudson, N. Y., has added a new safe to his store equipment.

Fred Goldsmith, of Ingomar Goldsmith & Co., New York, who returned last week from an extended trip to Amsterdam, Antwerp, Paris and London, is convinced that there will be several more advances in the price of diamonds before the end of the year, and thinks that retail jewelers will find it advantageous to purchase as early as possible.

W. W. HARRISON,

MANUFACTURER OF

Umbrellas and Walking Sticks

OF THE BETTER SORT,

405 BROADWAY, NEW YORK.

SOME POINTS OF EXCELLENCE in Harrison Umbrellas, gained by 25 years of careful study of the details so essential in making an umbrella adapted to the wants of the Jewelry trade:

Perfection of Finish in Handles. Finest Tempered English Frames.
Compactness in Roll. Strength of Construction.

Harrison's Gold Head Walking Sticks have stood the test for more than a quarter of a century. They comprise all the Standard Shapes and are made of twenty-year 14k. Filled Gold and of twenty-year 14k. Filled Gold with 14k. Solid Gold tops, ends and name plates. Also a line of Solid Gold Heads. Harrison's Superb Line of Mounted Riding Crops are carried by the best trade.

The only Umbrella and Walking Stick Manufacturer in the United States not selling to the Dry Goods and Department Stores.

W. W. HARRISON, 405 Broadway, New York.

Will Remove May 1st to
170 Broadway,
Broadway-Maiden Lane Building.

PEARLS

AND RARE GEMS

IN DIAMONDS, EMERALDS, RUBIES, ETC.

ALFRED H. SMITH & CO.,

IMPORTERS,

182 BROADWAY, NEW YORK.

CHICAGO,
103 State Street.

LONDON,
6 Holborn Viaduct

Boston.

Fred Heintz, engraver of jewelry and silverware, has removed from 427 to 351 Washington St.

George W. Wells, president of the American Optical Co., Southbridge, Mass., was in town last week.

I. Alberts, wholesale jeweler, 63 Jewelers' building, will move into new quarters in the annex about April 15.

Ezra C. Fitch, president of the American Waltham Watch Co., returned last week from a two months' trip through Europe.

Max Posner, the jewelry auctioneer, who recently returned from Atlantic City, will this week commence a large sale for a local jewelry house.

Alfred Nathan, who has been on the road as the representative of a diamond house for some 15 years back, has opened a branch office of Sohn & Hyman, New York, in Room 65, Jewelers' building.

The American Waltham Watch Co. has extended the time for early Saturday closing at the factory, and the employes will have the benefit of a weekly half-holiday from April 18 until and including Sept. 26.

Frank Pendleton, who has been in the employ of J. W. Marshea, Harvard Sq., Cambridge, for some time, will sever his connection with that concern and accept a position with F. A. Colburn about May 1.

Foreman Henry Mullen of the plating and trainmaking department of the United States Watch Co., Waltham, has resigned his position. Mr. Mullen is one of the best-known watchmakers in Waltham and had worked for the United States Watch Co. for several years.

Emory H. Fairbanks, 713 Centre St., Jamaica Plains, intends to sell out his jewelry and watch repairing store. Mr. Fairbanks has been in business in Jamaica Plains for a number of years, and is anxious to retire or at least make a change in his occupation.

John Naigles has sold out his interest in the Emblem Jewelry Mfg. Co. to his partner, D. Goldwasser, who will carry on the business alone. Mr. Goldwasser intends to move into new and more comfortable quarters about June 1, as his present place at 7 Bromfield St. is not suited to his increasing business.

An attempt to rob the jewelry store of John B. Hill & Son, Cabot St., Beverly, was frustrated by the police of that city one night last week. The thieves had pried off a double window in the rear of the store and had broken the pane of glass in another, when they were frightened away by the approach of an officer and made their escape. Nothing was missing from the store and it is thought that the men had not entered but had been interrupted right at the beginning of their work.

Buyers in town during the past week were: George H. Gutteridge, Maynard; John R. Feltus, Springfield; H. L. Hall, Baldwinsville; Mr. Chapin, of Bruce & Chapin, Worcester; L. R. Hapgood, Orange; C. W. Anderson, Manchester, N. H.; Obed Lyon, Brockton; H. S. Hewett, Brockton; A. E. Garnsey, Sanford, Me.; Fred Gray, of the Grant Jewelry Co., Lowell; D. C. Barrows, Willimantic, Conn.; H. O. Barthelmes, Marlborough; W. H. Litchfield, Keene, N. H.; A. G. Slocum, Attleboro; Hugo Beil, Lawrence.

Osborn Gillette, the jeweler of Woburn, Mass., who last week caused the arrest of Newell D. Atwood, an auctioneer of this city, claims that the facts as appeared in THE CIRCULAR-WEEKLY last week were not entirely correct, and states that instead of purchasing his business Mr. Atwood had simply bought from him some old stock amounting to about $1,500 out of an entire stock of $9,000. He claims that Mr. Atwood was dissatisfied with his bargain after paying for some of the goods and took a number of watches, valued at about $800, which had been left to be repaired. Mr. Gillette claims that Atwood refused to return the watches on demand and that when he started for Boston the jeweler caused his arrest.

Attleboro.

David E. Makepeace placed on the market for auction yesterday the plant of the Teed, Crandall Co.

Work has been started on the new addition to the factory of the Cohannet Silver Co. on Chester St., Taunton.

N. Justin Smith and Henry B. Richardson, both former members of the G. A. Dean Co., have gone into the plated chain business together.

William C. Tappan and David Lowe, both of the D. F. Briggs Co., have been elected president and secretary, respectively, in the Foss Valve Co.

Clarence M. Dunbar, of the Dunbar, Leach, Garner Co.; Ezekiel Blake, of the James E. Blake Co.; David E. Makepeace, of the D. E. Makepeace Co.; George H. Herrick, of George H. Herrick & Co., and Carl V. J. Christensen, of the Frank Mossberg Co., were last week installed to office in the Royal Arch Chapter.

The Attleboro jewelers by a series of letters to their Senators and Representatives have thrown their almost unanimous influence in favor of a bill now pending in the Massachusetts Legislature, entitled, "An Act to Prohibit Sales of Merchandise in Bulk, in Fraud of Creditors." They took this action partly on their own initiative and partly at the request of the Boston Credit Men's Association.

Sidney O. Bigney, of S. O. Bigney & Co.; Emmons D. Guild, of the W. H. Wilmarth Co.; Edward A. Sweeney, of the same corporation; David E. Makepeace, William L. King, of E. D. Gilmore & Co.; Fred L. Torrey, George H. Herrick, M. W. Potter, of J. M. Fisher & Co.; Charles O. Sweet, of Regnell, Bigney & Co., and Walter J. Newman, of the Horton, Angell Co., were last week elected to office by the Odd Fellows.

The case of Ransom M. Derick, doing business as R. M. Derick & Co., came up last week in the Bankruptcy Court. The following claims were allowed: James E. Blake Co., $101.75; A. R. Block, $4.50; A. Bushee & Co., $51.11; P. J. Cummings & Co., $33.88; E. A. Fargo & Co., $15.05; A. S. Ingraham, $29.79; Joyce & Co., $56.09; A. L. Leavitt & Co., $16.86; R. B. Macdonald & Co., $14.23; Pierce & Carpenter, $37.50; L. J. Roy & Co., $12.95; D. A. White & Co., $84.02; Murray, Blanchard, Young & Co.,

The E. Howard Watch Co.
has ready for delivery

A New Model 16-Size Bridge Movement,
fitting regular model cases. This movement is designed for the very best trade and represents the highest attainment in watch making. Open face and hunting.

Estimates cheerfully furnished. Samples on application

$75.49; Chas. M. Robbins Co., $10. The meeting was then continued until May 13 in Fall River.

North Attleboro.

G. C. Hudson, of the G. C. Hudson Co., has returned from the west.

Harry E. Barden has entered the shipping room of H. F. Barrows & Co.

Artner Chase, western salesman for F. S. Gilbert, is in town for a few weeks.

George L. Paine, western representative for E. I. Franklin & Co., has returned from an extended trip.

Charles W. Hempel is enjoying a short rest before he starts on the road again for the Cory Mfg. Co.

John E. Tweedy, of Cheever, Tweedy & Co., has been elected chairman of the Board of Park Commissioners.

Fred E. Sturdy, of J. F. Sturdy's Sons, has returned from Crescent City, Fla., where he spent a number of weeks.

G. Herbert French, of Riley, French & Heffron, has returned, with his family, from Florida, where he has been spending the Winter.

Daniel M. Chisholm, of the Bugbee & Niles Co., and Miss Miriam Chisholm have returned from an enjoyable outing in Jamaica.

A testimonial to Edward A. Irvine will be given before he starts for Los Angeles by the employes of H. F. Barrows & Co. and others.

The Mason Box Co. is following in the plan for improved landscapes about the shops in town, and is grading and sowing down the land around its factory.

Theron I. Smith, of the T. I. Smith Co., with Mrs. Smith, has returned from Florida and Havana. At the latter place he had an interesting experience, visiting the wreck of the *Maine*.

Edgar L. Hixon, of the R. F. Simmons Co., and the estate of O. M. Draper are joint defendants in a suit started by the town against Charles T. Guild, former Collector of Taxes. The damage is placed at $15,000. The first mentioned parties are on Mr. Guild's bond. The case is pretty sure to be long drawn out. The action is one of contract to recover taxes alleged to be due the town. The suit was brought under the provisions of a vote passed at the annual town meeting. The motion which resulted in the vote was made by W. H. Riley, of Riley, French & Heffron.

Buffalo.

Comerford Bros., instalment jewelers, 14 S. Division St., are reported to have dissolved partnership. Wm. Comerford will continue in business.

Henschel & Frank will open a handsome jewelry store at 444 Main St. about May 11. B. M. Henschel, the senior partner, has been in the jewelry business for the last 19 years and is now connected with Heintz Bros. M. A. Frank, his associate, is a manufacturer of buttons in Newark, N. J., and Baltimore, Md.

Frank A. Elmer, Hudson, N. Y., has removed to a larger store next door to his former location, thereby gaining much needed additional floor space.

Connecticut.

Clarence C. Markham, Guilford, is established in his new quarters, on Boston St.

A jewelry factory at North Windham has been closed owing to an epidemic of measles among the employes.

President Geo. E. Savage, of the Manning & Bowman Co., New Haven, has just returned from a six weeks' trip to California.

Capt. John H. Park has been appointed manager of the E. H. H. Smith Silver Co., Bridgeport, of which he will also be a stockholder.

C. E. Stockder, of the International Silver Co., is spending a few days with his wife at their Summer residence in the Thimble Islands.

The death is announced of Mrs. Drusilla W. Mitchell, widow of Jos. R. Mitchell, Bristol. Mrs. Mitchell was 73 years of age and died of shock.

The citizens of Meriden are planning to present to Mrs. Geo. R. Curtis a magnificent silver loving cup lined with gold. The cup will stand 14 inches high and will cost about $300.

Albert Weckter, Thomaston, set out for Marietta, O., last Thursday, where he will install a tower clock built for the Washington County Court House, of that place, by the Seth Thomas Clock Co.

Chas. Bergen, formerly of Meriden, has accepted a position as traveling representative for the J. D. Bergen Co., succeeding Geo. A. Stockder, who has gone with the U. S. Glass Co., Bowling Green, O.

Albert G. Root, a jeweler of Danbury, has just completed a week's engagement in Springfield, Mass., where he was exhibiting a miniature steam engine built by himself and described in a previous issue of THE CIRCULAR-WEEKLY.

Superintendent Martin H. Brown, of the E. A. Bliss Co., Meriden, has assigned his patent recently issued for embedding precious stones in celluloid, to the E. A. Bliss Co., which has established a new department in the factory for the manufacture of celluloid combs.

The G. I. Mix Co.'s property in Yalesville was sold last Wednesday, the names of the purchasers not being divulged. Those who bought the property intend to form a joint stock company, and will manufacture a new line of goods in addition to the articles manufactured at the old plant for years.

Geo. H. Wilcox, Meriden, has been reelected one of the executive committee and also a steward of the famous Metabetchouan Fishing and Game Club, the headquarters of which are located at Lake Kiskisink, Canada. Ex-Congressman Kellogg, Waterbury, is the club's president.

After a conference between National Vice-President B. C. Fitzpatrick, of the Metal Workers' Union, the members of the executive board of the local union, and the company's representatives, it was announced last Wednesday afternoon that the strike at the Simeon L. & G. H. Rogers factory, Wallingford, had been amicably settled and that the men would return to work at once.

employe of factory "E," of the International Silver Co., died at the home of her sister in South Meriden, last Friday morning.

The Waterbury Clock Co. is about to erect an addition to its plant. It will be five stories high and 43 x 116 feet.

Manager W. H. Lyon, of the Charles Parker Co., Meriden, recently appeared before the Meriden Board of Relief to have an error corrected. It seems that the Parker spoon shop, assessed at $25,000, on the Middletown Road, was included in the city list. The matter was adjusted.

In the will of the late Aaron L. Collins, late president of the Meriden Cutlery Co., B. W. Collins is named as executor and the property, valued at between $250,000 and $300,000, is divided among the three sons—B. W., Edward and Charles—bequests being made to Miss Bessie Collins, a granddaughter, and Miss Victoria A. Ives, for many years Mr. Collins's housekeeper. There are no public bequests, it is understood.

Baltimore.

J. W. Putts, with his wife and daughter, spent the Easter holidays at the Grand Atlantic Hotel, Atlantic City.

A local detective will go to Norfolk, Va., after "E. M. Martin," who was arrested there last week. He is charged with robbing the home of Conrad Klank, of C. Klank & Sons, of several hundred dollars' worth of fine silverware on Feb. 28. "Martin" is believed to be Patten Hooper, who served a long term for robbery in Philadelphia, Pa.

Another memorial window from the Tiffany studios in New York, was unveiled in the Associate Congregational Church on Easter Sunday. The subject is an adaptation from the painting by the German artist Hoffmann, entitled, "Behold, I Stand at the Door and Knock." The colorings are rich and harmonious and a great deal of the Tiffany opalescent glass is used. It cost $800.

Edward H. Mealy, son of John W. Mealy, of John W. Mealy, Son & Co., caused much surprise to his parents and friends by quietly slipping away and marrying Miss May Mengel on Saturday at Wilmington, Del. John W. Mealy says he could not conjecture any reason for his son's not acquainting his parents unless he desired his own wedding to precede that of his sister. There were no objections from either side to the match. Mr. Mealy and his bride are spending their honeymoon at Cape May, N. J.

Albany.

TRADE CONDITIONS.

The Albany jewelers experienced an exceptionally large Easter trade. At some of the stores the business almost equalled the holiday trade.

Thomas Kennedy, a student at the R. P. I., Troy, N. Y., and William Kennedy, of St. John's College, Fordham, N. Y., and who are sons of William Kennedy, the Broadway jeweler, spent their Easter vacation with their parents.

Isaac Brilleman is to vacate his present place of business, on N. Pearl St., before May 1, as the American Express Co. has secured a lease of the store and will take possession of it on the above named date. The jewelry stock is now being disposed of at retail and private sales.

Savannah, Ga.

George R. Youmans has been elected a director of the South Atlantic Car and Mfg. Co., Waycross, Ga.

A. L. Desbouillons, R. Van Keuren, Al Sternberg, of Sternberg & Co.; F. Wachstein, S. E. Theus and R. M. Courtenay, of Theus & Co., have become members of the recently organized Chamber of Commerce of Savannah.

S. E. Theus is one of the contributors to a fund for placing a memorial granite block mounted by a cannon in the Confederate soldiers' lot in Laurel Grove Cemetery at Savannah. The memorial will be unveiled April 26, Memorial Day.

The show window in the store of J. Levy & Co., 211 Congress St. W., was broken by a thief one night last week and about a dozen small alarm clocks were stolen. It is thought the thief used a glass cutter to make the openings in the window.

G. R. Youmans, Waycross, Ga., with Warren Lott, James Knox, W. W. Sharp and L. A. Wilson, have bought the dry goods business of the Brad-Watson Co., which will be incorporated under the name of the Youmans Mercantile Co., with a capital stock of $25,000.

R. Van Keuren & Co. have had on exhibition during the past week a life size oil painting of Pope Leo XIII., the work of Valentine Molino, a Savannah artist. The painting has been much admired and will be disposed of at the fair now being held for the benefit of the new Church of the Sacred Heart.

Judge Jacobs has given an opinion in the case of the Darst Co., Chicago, against Benj. Cohen, Steelton, Pa., giving leave to the defendant to file an additional affidavit of defense within 20 days. This is a suit for the recovery of $160, alleged to be due for jewelry purchased from the plaintiff. The argument in the case was upon a motion by the plaintiff for judgment for want of a sufficient affidavit of defense.

Meeting of the Optical Society of the City of New York.

The regular monthly meeting of the Optical Society of the City of New York was called to order by President Marchant last Wednesday evening, April 8, 1903.

Prof. Fox delivered an instructive lecture upon "Refraction," allowing the members to demonstrate by experiment in the laboratory that rays of light in passing through a glass prism were bent toward the base of said prism, but that the object from which such rays emanated appeared displaced toward the apex.

Dr. Bryan then offered a treat which, should he continue along that line, will prove of inestimable value; the only objection is that his time is too limited. He had prepared dozens of eyes, which the members themselves dissected, thereby allowing them to get a better understanding of the anatomy and functions of the various parts of the eye than had ever been obtained before. Could the doctor have added a lecture to this—well, there might have been a brain fever epidemic, so it is better thus.

The business meeting was next called. Secretary Ryer read the minutes of the last meeting which, upon motion, were adopted as read. Communications consisted of a letter from E. L. Jones, secretary of the American Association of Opticians, stating that the annual convention of that association would be held at Atlantic City, N. J., July 7 and 9, and asking the members of this society to consider the advisability of holding the State convention at this time and place. Congratulations were offered to the officers and members for the efforts they have made for the betterment of the profession.

A letter from Mr. Hilborn, tendering his resignation, was also read. Mr. Hilborn is now an active worker in the New Jersey Optical Society and those duties would not permit him to continue a member of this society. No applications for membership were received.

It was then moved that the secretary cast one ballot for the election to membership of the following candidates: C. F. Hughes, Brooklyn; H. Albert Heath, Jersey City; Arthur Frank and R. M. Lockwood, New York. The society's bills were presented and ordered paid.

President Marchant then presented Mr. Dilworth with the set of resolutions voted him at his retirement from office. Mr. Ferguson stated that the surplus remaining in the City Society's treasury was not as great as it should be, and proposed, as a means for strengthening that fund, that each member present at the lectures should pay 25 cents.

Considerable discussion followed, but it was finally decided to let the matter lay over until next meeting, when the members, having had time to consider, could settle it.

Mr. Dilworth then moved that the janitor be paid $50 per year for his services, in view of the fact that his duties were such, without doubt, as to warrant such remuneration. Carried.

Mr. Ferguson moved that the executive committee be asked to consider the advisability of having two meetings, instead of one, each month. This was also carried.

Mr. Kahn moved that non-resident members and members of other societies be allowed to attend the lectures upon the payment of 25 cents. This point was argued carefully, adjudged unfair and the motion was lost.

Mr. Kahn had made a statement in the previous part of the evening, that unpaid dues could be easily collected in many cases were the delinquent members called upon. Mr. Dilworth moved that Mr. Kahn be appointed a committee of one to collect the dues in this manner and the motion was carried.

Mr. Smith, of New Jersey, was asked for information regarding the bill to regulate the practice of optometry that was before the New Jersey Legislature. In reply he said that through powerful influence it succeeded in getting no further than the Assembly and was held up until it became too late to advance it further.

Harvard Watch Mfg. Co. Incorporated To Manufacture at Louisville, Ky.

LOUISVILLE, Ky., April 8.—Articles of incorporation of the Harvard Watch Mfg. Co. were filed in the Clerk's office to-day. The capital of the company is $60,000 and the officers and directors are as follows: Christian Stege, of the Western Bank, president; H. Meinhardt, New Albany, vice-president; F. F. Lutz, secretary, and John R. Pflanz, treasurer. Other directors are Charles Richter, Chicago, and F. W. Vogt, Louisville.

The company has secured a large factory on Portland Ave. and will begin operations as soon as the necessary machinery can be installed. The factory will have a capacity of about 2,000 watches a day. From 60 to 75 workmen will be employed, most of whom are skilled, and will be brought here from Chicago, where the company has been operating. The company was brought to this city through the influence of the Commercial Club.

Van Gelder, Kahn & Co.

WILL MOVE

About May 1, from 12 John St.

To 170 BROADWAY, cor. Maiden Lane,

(The Broadway-Maiden Lane Building.) NEW YORK.

Boston Jeweler Exonerated of Charge of Receiving Stolen Goods.

BOSTON, Mass., April 11.—Henry I. Bornstein, 26 Tremont Row, is receiving congratulations from a large circle of friends and acquaintances among the members of the trade on account of the refusal of the Suffolk Grand Jury to find a bill against him on the charge of having purchased stolen goods with a full knowledge of the source from which they came.

Mr. Bornstein was arrested a few weeks ago on evidence given the police by one Edgar Bell. The latter was taken into custody on the charge of having stolen diamonds and jewels from a wealthy New York woman, and informed the officers who had him in charge that he disposed of the goods to Mr. Bornstein for $400. Bell was not under oath when he made this statement, but it was considered of sufficient force to hold Bornstein for the Grand Jury. When Bell was subsequently taken before a jury and placed under oath, he denied the story previously told to the police and freed Bornstein from all suspicion. He further said that he had made his previous statement under the belief that the implication of Bornstein would tend to lighten his own sentence.

Leon R. Eyges, counsel for Mr. Bornstein, is highly elated over the outcome of the case, and the many friends of the jeweler who have known him in a business way for more than 30 years are glad that he has been able to clear himself of all the charges in connection with the case.

W. W. Hamilton Files Answer To Suit Brought by Edward Lehman.

DENVER, Col., April 8.—An answer has been filed in the case of Edward Lehman against W. W. Hamilton, a former partner in the jewelry business of W. W. Hamilton & Co., in this city, whose troubles were noted in a recent issue of THE CIRCULAR-WEEKLY. The answer denies the charges made in Mr. Lehman's complaint and makes a number of other allegations.

Mr. Hamilton says that instead of $4,000, over $25,000 has been collected and placed in the bank to the credit of the firm. Mr. Lehman does not deny that about $25,000 has been collected since the firm dissolved, but says that all but $4,000 has been paid out and it is this amount for which he demands an accounting.

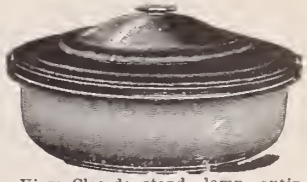
Lehman also says that Hamilton owes him about $5,000 on account of an overdraw made by Hamilton before the dissolution and as purchase price for Lehman's half interest in tools, etc., which Hamilton agreed to pay when the two partners separated.

The case will come up in about 10 days and the Judge will then decide whether he will hear the testimony or appoint an arbitrator.

Amicable Settlement Momentarily Expected at C. Rogers & Bros.' Plant.

MERIDEN, Conn., April 10.—President Geo. H. Wilcox, of C. Rogers & Bros., the corporate name of the predecessor of factory "H," International Silver Co., said this morning that he had not as yet talked with Manager Munson at the factory in regard to the trouble with the flatware buffers. Mr. Wilcox said that if possible he would meet Mr. Munson during the day and talk over the situation. He continued:

"I have heard only one side of the story thus far, so I am not in a position to say anything positive about what will be done, but I have hopes that the trouble will be straightened out in a manner satisfactory to all concerned."



Mr. Wilcox declared he would meet a committee of the men Saturday morning.

B. C. Fitzpatrick, of the Metal Workers' National Executive Board, who settled the Wallingford strike and who came to Meriden after that and attended a meeting of factory "H" buffers, has returned to his home in Troy, N. Y., feeling quite satisfied that the trouble here would be settled.

Manufacturers Win a Victory.

Proposed Polishing Law Amended So As to Exempt Jewelry Factories.

Some important labor legislation affecting jewelry manufacturers and silversmiths in New York State, was brought to a successful issue by Chas. R. Jung, president of the Manufacturing Jewelers' Association of New York, and L. H. Stern, of Stern Bros. & Co., who went to Albany Tuesday and Wednesday of last week to oppose the Wemple bill, which is an amendment to the law relating to polishing and buffing. Acts with similar provisions have been before the Legislature for the past three years, but have always been defeated by the strenuous opposition of the jewelry manufacturers represented by the abovementioned gentlemen, who went to Albany each year to fight it.

The bill, which was published in full in THE CIRCULAR-WEEKLY April 1, forbids the employment of females at all, or males under 18 years of age, in polishing and buffing shops where tripoli, rouge and other abrasives are used. When the bill was introduced this year Messrs. Stern and Jung were detailed as a committee by the Manufacturing Jewelers' Association of New York to fight it. These men went at the task with their customary caution and energy, but, after a little investigation, they discovered that the act would be more strongly defended by its sponsors than ever before. The first trip to Albany, two weeks ago, was devoid of results, owing to the fact that they were unable to secure a hearing, because of the great pressure of business in the Legislature. When a final hearing was given them April 7 before the Assembly Committee on Labor and Industries, the final vote of the committee at the end of the discussion was a tie.

The hearing was well attended by prominent labor leaders whose followers were most affected by the bill. Among them were Nicholas Duttle, president of the National Metal Polishers' Union of the United States; Jas. A. Lavery, chairman of the State Legislation Committee of the Workmen's Federation of the State of New York; John J. Flinn, fourth vice-president of the Metal Polishers' Union; Jos. E. Crooke, of the Central Federation of Labor of New York; Martin J. Clune, of the Local Metal Polishers' Union of Schenectady; Andrew Hellthaler, president of the Silver Polishers' Union, and F. J. Davidson, president of the Gold Penmakers' Union. These men all spoke in favor of the bill and sought to overwhelm Messrs. Stern and Jung with facts, figures and arguments.

At the close of the hearing, when the tie in the vote was announced, the labor leaders had changed their sanguine view of the situation which they had entertained at the beginning, having refused at that time to compromise with Messrs. Stern and Jung, and asked for a conference. It was then that the representatives of the Manufacturing Jewelers' Association of New York had the opportunity of showing the strong feeling of loyalty which that association has not only toward its own particular industry, but toward kindred industries. They could easily have compromised the situation then by agreeing to an amendment excluding manufacturing jewelers from the bill. Instead of doing this they insisted that the silversmiths of New York State should also be exempted. This decision on the part of the New York committee caused an adjournment of the conference without a settlement. Messrs. Stern and Jung were convinced, however, that they would win their point in time, and decided to hang on.

While the discussion of the Wemple bill had been hanging fire in the Assembly, the labor leaders had sought to expedite matters by the introduction of a similar bill into the Senate. This bill was introduced by Senator Brackett and had been referred to the Judiciary Committee. A hearing on it was set for Wednesday afternoon and Messrs. Stern and Jung remained over to oppose that also. Wednesday morning, however, the labor leaders again called for a conference and expressed their willingness to comply with the decision of the New York committee in regard to the silversmiths. There was some further talk between the committee and the labor men to have the gold pen manufacturers included in the list of those who were to be excluded from the effect of the polishing bill, should it become a law, but, as the labor leaders were very much opposed to this, and as the gold pen manufacturers had made no fight against the bill, the representatives of the Manufacturers' Association did not insist. At this point Messrs. Stern and Jung told the labor leaders that they would withdraw all opposition to the bill in consideration of the concessions already granted, and the bill was then amended to read as follows, the phrase in capitals showing the amendment resulting from the compromise:

EMPLOYMENT OF WOMEN AND CHILDREN AT POLISHING OR BUFFING.

No male child under the age of 18 years, nor any female shall be employed in any factory in this State in operating or using any emery, *tripoli, rouge,* corundum, stone, *carborundum or any abrasive,* or emery polishing or buffing wheel, WHERE ARTICLES OF THE BASER METALS OR OF IRIDIUM ARE MANUFACTURED. The owner, agent or lessee of a factory who employs any such person in the performance of such work is guilty of a misdemeanor and upon conviction thereof shall be fined the sum of $50 for each such violation. The Commissioner of Labor, his assistants and deputies, shall enforce the provisions of this section.

This bill with its amendment was approved by the Judiciary Committee and will undoubtedly be passed in a very short time in the regular manner, as there seems to be no opposition to it.

At the hearing of the original bill before the Assembly Committee Tuesday the principal speech against it was made by L. H. Stern, Chas. R. Jung coming to Mr. Stern's assistance later by the effective way in which he replied to the rapid cross-fire of questions thrown at him by members of the committee and by the labor leaders. Mr. Stern declared in his speech that the proposed amendment was viewed with great alarm by the Manufacturing Jewelers' Association of New York, for its enactment would be virtually an embargo prohibiting the further manufacture of jewelry in the State, which amounts annually to millions of dollars. He stated that it would throw out of employment in New York City alone more than 1,700 female operatives, and in the State about 2,100 additional, and would paralyze for the next five years, or longer, the industry in the State, as there were no male operatives to take their places.

Replying to the arguments advanced by the opposition, Mr. Stern declared that the occupation of polishing and buffing with tripoli and rouge, as conducted in modern equipped factories of to-day, was not injurious, as with the aid of exhaust fans and suction pipes every particle of substance flying from the buffing wheel was carried off and the air left pure and wholesome. He declared that it was far less injurious than hundreds of other occupations in which women and girls were engaged. Supporting this argument, Mr. Stern produced the sworn affidavit of L. Sylvester Sobel, a practicing physician of New York, which stated that he had examined the polishing and buffing department of Stern Bros. & Co.'s factory at 33 Gold St., and found their suction system a perfect one and not in the least injurious to the eyes, lungs, heart, stomach, liver or kidneys, or in any way harmful to the health of the female employes. Mr. Stern said that it took women and girls from 12 to 18 months to learn the occupation, after which they earned from $7.50 to $12.50 a week.

Mr. Stern further declared that the amendment had a veiled purpose, which was to legislate out of business the women and girls and replace them by men who were more easily influenced by labor unions. It was to give these labor organizations more power, and not because of a chivalrous regard for women, he said, that the bill was introduced.

Mr. Jung, when called upon, explained the system and methods of polishing and buffing, and created in the minds of the Assembly Committee a more correct impression of the actual conditions in that department of a jewelry manufacturing plant than anything that had heretofore been brought to their notice.

The committee of the Manufacturing Jewelers' Ascociation regards the outcome of the fight as an absolute victory, and with much more favor than if the entire bill had been killed.

Assets and Liabilities of Isaac Katz.

The schedules of Isaac Katz, dealer in watches and jewelry at 18 Maiden Lane, New York, against whom an involuntary petition in bankruptcy was filed, March 2, in the United States District Court at New York by Chas. P. Goldsmith & Co., L. Weil & Sons and Manasseh Levy, were filed in court, Saturday, and show liabilities of $10,812 and assets of $4,105.23, consisting of stock in trade, $300; debts due on open accounts, $2,274, and property claimed to be exempted, $325.

Among the creditors for amounts ranging upward of $100 are: Alling & Co., $230; Chester Billings & Son, $125; Day, Clark & Co., $279; Chas. P. Goldsmith & Co., $1,331; A. J. Hedges & Co., $1,154; Kent & Woodland, $105; L. Fritzsche & Co., $959; Larter, Elcox & Co., $621; Manasseh Levy, $328; Albert Lorsch & Co., $922; David Mayer, $516; Wm. W. Randall, $268; Edmond E. Robert, $145; Jos. M. Rossi, $131; Simons, Bro. & Co., $830; L. Weil & Sons, $116; Louis Strasburger's Son & Co., $1,668, and Alois Kohn & Co., $524.

Capture of Two Men Accused of Robbing Store of Frank B. Thayer.

MEMPHIS, Tenn., April 13.—Two clever thieves successfully robbed the jewelry store of Frank B. Thayer, at 389 Main St., this city, Thursday night. Monday the police arrested two men giving the names of Jim Bryant and H. W. Williams, who have been identified as the men who committed the theft.

The men who had previously called at the store early in the week visited it again about noon Thursday, and were waited upon by Dr. Morris. They asked to see a locket that had been shown to them on their first visit and wanted to know the size of a diamond that could be put in the same for about $56. Dr. Morris picked up a ring tray, pulled out a ring that had a stone of the size wanted, and showed it to the men, but kept the tray at all times guarded. A neck chain was then asked for, and while Dr. Morris was reaching for the chain the men must have quickly substituted two paste rings for two diamond rings worth $475.

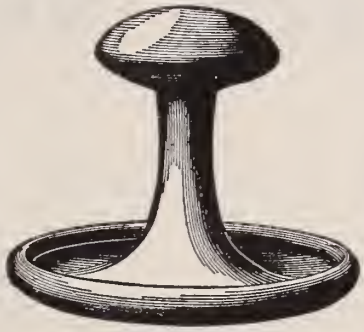
The substitution was not discovered until five minutes after the men had left. One of the men has light complexion, light hair, is about 5 feet 7 inches high, wears a dark brown Fedora hat, has smooth shaven face and a nose that appears to have been broken. The other man, who did the talking for the pair, is dark, about 5 feet 9 inches high, of good address, and has a gold filling in the right eyetooth.

Resolutions on the Death of Aaron L. Collins.

MERIDEN, Conn., April 8.—At a meeting of the board of directors of the Meriden Cutlery Co., held recently, the following preamble and resolution were unanimously adopted:

The directors of the Meriden Cutlery Co. with sorrow make record of the death on March 25 of Aaron L. Collins, their president. Mr. Collins became a stockholder in and treasurer of this company in 1856, one year after its incorporation. In 1863 he was elected president, holding that office until 1867, when he resigned to take the same position in another company. In 1877 he was again called to the position of president of this company, and since that time the company has had the benefit of his long experience and good judgment.

To all those with whom he dealt Mr. Collins's word was as good as his bond, and we desire to express our appreciation of the great benefit which this, in addition to his other services, has been to the company during the vicissitudes of business for the last 25 years. Though prevented by ill health from taking active participation in the business for the last 18 months, he has shown the same interest in its welfare to the end. His associates on the board, all of whom have been personal friends for many years, feel that they have sustained a personal loss.



Resolved, That this record be spread upon the official minutes of the company and a copy be sent to the family of the deceased.

A special meeting of the directors of the Meriden Cutlery Co. will be called soon to elect a president to succeed Mr. Collins. It is said that Homer A. Curtiss, now secretary, can have the presidency if he will accept it.

D. W. Harrison last week left for the Pacific Coast with a full line of samples of W. W. Harrison's fine umbrellas, parasols, walking sticks and riding crops. This territory has been covered by Mr. Harrison's father, W. W. Harrison, during the last 20 years.

The Giant of Collar Buttons

IN QUALITY,
IN SALES.

One Million Five Hundred Thousand Krementz One-Piece Collar Buttons made and sold within the last year. . . . . .

WHY? Because of their HIGHEST QUALITY, BEST CONSTRUCTION, GIVING THE MOST WEAR, AND GREATEST COMFORT and their IRON-CLAD GUARANTEE.

To verify this we invite the trade to read "**The Story of a Collar Button, with Illustrations,**" which may be had **FREE** for the asking, and to try the experiment suggested on page 5 of that booklet.

Extract from "Printers' Ink," Nov. 23, 1898.

The Little Schoolmaster now suggests, to every pupil in his class, to send a two-cent stamp to Krementz & Co., 49 Chestnut Street, Newark, N. J., and ask to be favored with a copy of their leaflet, "The Story of a Collar Button." Afterward, if any pupil will send to *Printers' Ink* another leaflet, new or old, that is half as good as this one, or that approaches it in excellence, the deserving student will be rewarded with one of *Printers' Ink's* souvenir spoons as an acknowledgment of his discovery and contribution. "The Story of a Collar Button" is the best piece of advertisement construction that has come to *Printers' Ink's* attention in the yeat of our Lord 1898.

Should you wish to utilize this booklet to increase your collar button business, we will, on receipt of your order, print your card upon and send you a quantity of them.

Krementz One-Piece Collar Buttons are stamped as follows, ON BACKS:

Patent sustained by United States Supreme Court.

Quality and Construction have made our reputation.

All Krementz Collar Buttons are Manufactured by

KREMENTZ & CO.,

in their Factory,

49 Chestnut Street,

NEWARK, N. J.

PARKS BROS. & ROGERS,
20 Maiden Lane, New York.
Selling Agents to Jobbing Trade.

Waltham Watches.

No attention paid to communications unless accompanied by full name and address of the writer.

Personal Names and Photographs Protected.

MANUFACTURERS and dealers in the jewelry trade as well as other lines will no doubt be interested in the somewhat drastic measure recently passed by the New York State Legislature and signed by Governor Odell last week, which forbids the unauthorized use of a person's name or portrait, in advertising or selling articles of merchandise. This bill not only makes it a misdemeanor to so use a name, or portrait without written consent having been obtained, but also gives to the party aggieved, the right of an action for damages for any injuries sustained, and allows a jury in such action to award exemplary damages as well.

This bill, which is introduced by Senator Elsberg, of New York, and met with but little opposition in the Legislature, was intended to do away with an abuse which has grown very flagrant of late years and will no doubt accomplish its purpose. While it is true that many manufacturers have improperly taken the name of a prominent person, attached it to an article of merchandise and attempted to sell the article on the strength of the reputation or popularity of the person after whom it was named, there are on the other hand many retailers and wholesale merchants who innocently handle such products, and the law in question might have resulted in a hardship to the latter, but for the fact that it will not take effect before Sept. 1 next. This will give the dealer plenty of time to dispose of, or return, such articles as violate the provisions of the law and give the offending manufacturers a chance to change their policy.

The full text of the act as passed is as follows:

AN ACT TO PREVENT THE UNAUTHORIZED USE OF THE NAME OR PICTURE OF ANY PERSON FOR THE PURPOSES OF TRADE.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

Section 1. A person, firm or corporation that uses for advertising purposes, or for the purposes of trade, the name, portrait or picture of any living person without the written consent of such person first obtained is guilty of a misdemeanor.

Sec. 2. Any person whose name, portrait or picture is used within this State for advertising purposes or for the purposes of trade without his written consent first obtained may maintain an equitable action in the Supreme Court of this State against the person, firm or corporation so using his name, portrait or picture, to prevent and restrain the use thereof; and may also sue and recover damages for any injuries sustained by reason of such use, and if the defendant shall have knowingly used such person's name, portrait, or picture in such manner as is forbidden or declared to be unlawful by this act, the jury, in its discretion, may award exemplary damages.

Sec. 3. This act shall take effect Sept. 1, 1903.

Failures in the Jewelry Trade.

A GOOD criterion of the condition of a trade is to be found in a comparison of figures showing the commercial insolvency in the line for any stated period with those of a similar period for previous years, and if this be done for the jewelry trade in the month of March, or the three months just ended, the result will be found to be satisfactory to merchants and manufacturers alike. While the failures in all trading lines were last month about normal in number and liabilities, the insolvencies among dealers in watches and clocks in the same period were about as small in number and far less in amount of liabilities than for any March in the past five years, and the same can be said of the failures in this trade for the first three months of the year as compared with the first quarter of any year since 1899.

According to an elaborate table showing failures by branches of business which was compiled for *Dun's Review*, there were only 15 dealers in jewelry and clocks who went to the wall last month, and their liabilities were but $45,163, or an average of $3,010. The improvement over other years will be seen from the fact that in March, 1902, there were 17 failures with liabilities of $133,402; in March, 1901, 16 failures with liabilities of $174,514; in March, 1900, 10 failures with liabilities of $84,686, and in March, 1899, 13 failures with liabilities of $48,801.

The figures for the first quarter of this year as given by the same authority show the jewelry failures for the first three months of 1903 to number but 49, with liabilities of $284,691, or an average of $5,810, as compared with 71 failures in the same period of 1902, with liabilities of $624,931; 67 failures in 1901, with liabilities of $516,778; 47 failures in 1900, with liabilities of $563,851, and 57 failures in 1899, with liabilities of $312,584.

Boston Police Notify Jewelers Who Buy Old Gold to Take Out Licenses.

BOSTON, Mass., April 12.—As a sequel to the recent decisions of the Supreme Court relative to the licensing of dealers in old gold and silver, the police have issued a circular warning such dealers that they must take out licenses from the Board of Police in order to carry on that business in a legal manner. The circular states:

"Cases have lately come to the notice of the police in which articles of jewelry or plate which had been stolen have been purchased by jewelers, gold beaters, platers or refiners and either sold or melted. The police feel it is possible that a considerable amount of stolen property is thus disposed of, and therefore they desire that all jewelers and other persons who buy second-hand jewelry or metals should take out a license as a dealer in second-hand articles. As licensed dealers in second-hand articles must make reports of their purchases to the police authorities, the police will then be enabled to trace much stolen property, the loss of which is reported to them, which is now, apparently, disposed of by being sold to jewelers, or persons engaged in similar trades.

"If, therefore, you ever buy any old jewelry, or old metals, you are requested to make application for a license to deal in second-hand articles to the Chief Inspector, Police headquarters, Pemberton Sq.

(Signed) "WM. H. PIERCE,
"Superintendent of Police."

LETTERS TO THE EDITOR.

Another Watchmaker's Complaint.

SARANAC, N. Y., April 5, 1903.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

No doubt the numerous subscribers to your valued journal have all read the letter published in the issue of Feb. 18, under the head, "A Watchmaker's Complaint," in support of which I would like to ask a little space. Before going into business for myself I traveled through the west and south, where I first noticed the condition of affairs complained of by our fellow-craftsman.

There are many so-called wholesale houses who send out annually a nicely compiled catalouge; some of these exclusively deal in watches, clocks and jewelry of standard makes, while others handle everything needed by people in the country, such as dry goods, groceries, notions, jewelry, clocks, optical goods, etc., etc. The first class of which I speak base their prices on that of our regular retail houses, giving 50 per cent. discount; the second class put the price straight down to the lowest wholesale price. Only yesterday I was informed that a party who came into my place of business about a week ago to inquire the price of a certain grade of watch, later bought the watch from one of the "handle-everything" stores in Chicago because my price was about $1 higher than that of the catalogue house.

If factories are going to sell to all alike, why can't we small dealers buy as cheaply as others or buy direct from the factory and have some show for our business life? If the factories won't help us out in this, what is the matter with all the retail fraternity co-operating to encourage the establishment of more watch factories, clock factories and silverware factories? We will be compelled before long, unless relief comes from headquarters, to do one thing or the other. E. PLURIBUS UNUM,
Another Watchmaker.

Mr. Skillin, of the Skillin Co., Portland, Me., has sold his interest to J. Ernest Miltimore, who has been on the road for several years for the Skillin Co. Since the above change has taken place large additions have been made to the company's stock and the business has been considerably increased.

Last Week's New York Arrivals.

THE CIRCULAR-WEEKLY each day posts in its office a bulletin of the latest buyers visiting New York, which every member of the trade is ordially invited to copy.

For the sum of $10, (payable in advance, a daily list will be mailed or delivered, during the Spring season (ending July 1, 1903, to the offices of those desiring this service.

The Death of John B. Albrecht.

ST. JOSEPH, Mo., April 8.—John B. Albrecht, who was said to have been the oldest jeweler in the northwestern part of Missouri, and one of the best-known residents of this city, died suddenly Monday night after a short illness, at the family home, 418 S. 11th St. The deceased was the father of O. J. Albrecht, a jeweler at 205 Felix St., and had been in the jewelry business himself for more than half a century.

Mr. Albrecht was born in Waldhut, Germany, Aug. 30, 1821, and came to America in 1848. Three years later he located in St. Joseph and shortly afterward formed the jewelry firm of Albrecht & Huber. The business started in the building at 205 Felix St., where it is still located, and the firm became widely known throughout this section, their specialty being watches.

Mr. Albrecht retired a short time ago and the business was continued by his son. The deceased's wife died in August, 1895, and he is survived by two sons, Albert J. and Oscar J. Albrecht. The funeral services took place this afternoon, and the remains were placed in the Mount Mora vault.

W. T. Sharp has moved from Howard, Kan., to Independence, Kan.

DIAMONDS!

CROSS & BEGUELIN

Importers and Cutters of Diamonds and Precious Stones

New Stores and Enterprises.

(New Optical concerns will be found in the Optical Department and new enterprises in New York will be found under heading "New York Notes.")

Parker & Jett are in business in Nardin, Okla.

E. P. Parker is a new jeweler at Council Bluffs, Ia.

C. E. Main is opening a jewelry store at Orting, Wash.

A new jewelry store will soon be opened at Casselton, N. D.

N. Kramer has started a retail business in Spokane, Wash.

William Albert Brown will shortly open a store in Danvers, Mass.

Thomas & Beck have opened a jewelry and drug store at Girard, Ga.

W. H. Durham has just commenced business at North Yakima, Wash.

Henry G. Schneider, an ex-councilman of Buffalo, N. Y., will engage in the jewelry business in Los Angeles, Cal.

M. Muskowitz, formerly watchmaker for the Baldwin Jewelry Co., San Francisco, Cal., has opened a repair shop at that place.

Albert T. Lemkuhl, whose incorporation was noted last week, has opened a new store at 40 W. Lexington St., Baltimore, Md.

P. Girard, formerly with the Gansl Jewelry Mfg. Co., Grand Forks, N. D., is about to commence a retail business at East Grand Forks, Minn.

A. J. Demmel, formerly with Emil Meybem, at Chico, Cal., left a few days ago for Waterloo, Ia., where he will engage in business for himself.

The Wolfson Mercantile Co. was recently incorporated to conduct a wholesale jewelry and notion business in St. Louis, Mo., with a capital stock of $2,500, the incorporators being A. L. Wolfson and Lodis Marx.

The H. C. Thompson Clock Co. has just filed a certificate of incorporation in Bristol, Conn., with a capital stock of $12,000. The members of the company are H. C. Thompson, Otto F. Strunz, J. R. Cairns and Ralph Urwin, all of Bristol.

The Lackawanna Cut Glass Co. was incorporated in Scranton, Pa., last week, with a capital stock of $20,000. Thomas D. Finnerty, of Scranton, is treasurer of the new company, and the directors are Wesley M. Gardner, Thomas E. Finnerty and Thomas A. Baker.

Jewelers' Gold Bars Withdrawn and Exchanged at New York.

Week Ended April 6, 1903.

The U. S. Assay Office reports:

Gold bars exchanged for gold coin	$293,740.92
Gold bars paid depositors	64,043.97
Total	$357,784.89

Of this gold bars exchanged for gold coin are reported by the Sub-Treasury as follows:

April 6	$89,021.76
" 7	46,793.46
" 8	16,253.44
" 9	73,365.02
" 10	31,153.69
" 11	37,153.55
Total	$293,740.92

New York Notes.

A judgment of $7,854.60 against Thomas B. Hidden in favor of L. Tannenbaum & Co., was satisfied Friday.

Silbermann & Co. have moved from 64 John St. into much larger and more convenient quarters at 87 Maiden Lane.

The Merrill Bros. Co. have removed from 31 E. 17th St. to more convenient offices in the Decker building, 33 Union Square.

John C. Hull, of the Silver Plate Cutlery Co., who has been seriously ill for some time, is again calling upon the trade in the west.

Berthold Boehler, one of the founders of the Watchmakers' Association of New York, died at his home last week at the age of 66 years.

The Brooklyn Bronze Works was incorporated at Albany last week by A. N. Peterson, Waldemar Jansen and Frederick Lawrence, of Brooklyn, with a capital of $10,000.

The Imported Silver Manufacturing Co., of New York, was incorporated Thursday at Albany with a capital of $5,000. The incorporators are S. J. Schechter, A. C. Beek and Jacob Billet.

About 2:30 P. M. yesterday the water tank on the top of the building at 182 Broadway suddenly broke and did some damage to the roof. In this building are a number of jewelry houses but none suffered materially from the accident.

Wm. Bardel, a former New York jeweler, who has been the United States Commercial Agent at Bamberg, Germany, announces that his office there has been raised to a Consulate, and that he has been appointed Consul.

The Universal Time System Co., of New York, was incorporated Wednesday at Albany, with a capital of $10,000 to manufacture automatic time records. The directors are J. B. Rider, Hamilton Young and M. R. Trunck.

The Frank C. Osmers Co., for manufacturing jewelry, etc., was incorporated Friday at Albany with a capital of $15,000. The incorporators are Frank C. Osmers and A. W. Stamp, of New York, and Charles Haible, of Brooklyn.

Schwarz Bros. & Co., about May 1, will remove from their present store at 863 Broadway, to the first floor of 29 Union Square. After this date they will discontinue their retail business and sell to the high class wholesale trade exclusively.

Robert G. Perry has been appointed receiver of the assets of Geo. Lando, optician and dealer in phonographic supplies 451 Grand St., who filed a voluntary petition in bankruptcy last week, as has already been noted in THE CIRCULAR-WEEKLY.

The Alvin Mfg. Co., 54 Maiden Lane, will move about May 1 to 52 Maiden Lane, where it will occupy the entire building, which contains six floors. A number of alterations on the front and interior of the building will be made in the meantime.

The following officers of the Watchmakers' Association of New York were elected for the coming year at a meeting of the association held last week: Emil F. Ungerer, president; John A. Schmid, recording secretary; Valentin Gehrig, treasurer; Aloys Plass, trustee.

At the regular monthly meeting of the Jewelers Association and Board of Trade, held Thursday in the board rooms, 170 Broadway, the following firms were unanimously elected members of the association: B. Grieshaber, Chicago; Robt. H. Ingersoll & Bro., New York, and C. F. Rumpp & Sons, Philadelphia, Pa.

The first meeting of the creditors of Solomon Berlin, formerly a retail jeweler at 36 Forsyth St., against whom an involuntary petition in bankruptcy was filed March 26, in the United States District Court at New York, will be held April 27 at 10 A. M. in the office of Referee in Bankruptcy Stanley W. Dexter, 71 Broadway.

The Oriental Bank, which has moved to 175 Broadway temporarily until its permanent banking house, at 182 Broadway, is completed, has among its officers R. W. Jones, Jr., president, and Geo. W. Adams, cashier, who were formerly connected with the Seventh National Bank. Ludwig Nissen is one of the vice-presidents of the institution.

Wm. W. Hays, a wholesale dealer in jewelry, 21 Maiden Lane, is offering $300 reward for the return of a package of jewelry, valued at $1,000, lost in Broadway last week by a clerk. The clerk had the package at 44th St. and Broadway, where he stopped to complete a business transaction, but before he reached 95th St. it was gone. The route followed was along Broadway. The package contained one woman's ring with three stones, two diamonds of three carats weight, and one emerald of four carats.

James Harris, a steward on the steamship *Southwark*, of the Red Star Line, was arrested Wednesday night by Inspector Daniel Driscoll, of the Custom House, as he attempted to smuggle a quantity of gold leaf ashore. Harris admitted his guilt and went with Driscoll to a saloon on West St., where he pointed out Samuel Banewur, of 92 Second Ave., as the person to whom he was to deliver the leaf. Both were locked up in the Church St. police station and on the following day arraigned before United States Commissioner Shields. Harris was held in $1,000 bail for the United States Grand Jury, while, as nothing could be proved against Banewur he was discharged.

The Board of Classification of the United States General Appraisers handed down a decision last week, overruling the protest of Lazarus, Rosenfeld & Lehman, 56 Murray St., New York, against duty on merchandise consisting of music box movements and of works for use in making up so-called musical beer mugs. The goods were assessed at the rate of 45 per cent. ad valorem under the provisions of Par. 453, as musical instruments or parts thereof composed wholly or in part of steel or any other metals. The protestants claimed that the goods were dutiable at the rate of 34 per cent. ad valorem under provisions of paragraph 418, as toys. The Board decided that the merchandise was not toys and would be dutiable as manufactures of metal at the same rate as that fixed in the act for musical instruments.

Wood & Hughes, 24 John St., one of the oldest silversmith concerns in the United States, is selling out its stock at auction and retiring from business. The business was established in 1833, and the senior member of the firm, Chas. Wood, died in December 50 years later. The business was continued by the surviving partners, Dixon G. Hughes, Henry Wood and S. P. Fraprie. Mr. Fraprie died in December, 1889, and Mr. Wood passed away in January, 1900. After this Dixon G. Hughes continued the business alone under the old style. When seen Wednesday by THE CIRCULAR-WEEKLY reporter, Mr. Hughes stated that he was going out of business because of ill health. In addition to this the close competition which the firm is obliged to meet brought the business down to a position where it did not pay to continue it longer.

The schedules of Mayer Bros. & Wertheimer, formerly wholesale dealers in jewelry at 525 Broadway, New York, against whom an involuntary petition in bankruptcy was filed September 16, 1902, were filed Friday in the United States District Court at New York. This is the second set of schedules that has been filed in the bankruptcy of this concern and they were signed by Gustav Mayer and Sam-

Fine Glassware for the Table.

Plain, Engraved, Etched, Cut, and Rock Crystal Decorations.

C. DORFLINGER & SONS, 36 Murray Street, New York.

uel W. Wertheimer. The first schedules were signed by Henry W. Mayer, and differ from the last schedules very materially in the amounts given for the assets and liabilities. The schedules filed Friday show liabilities of $48,260, and nominal assets of $25,091, while the schedules filed by Henry W. Mayer Feb. 17, show liabilities of $33,823 and assets of $5,250, the amount obtained from the sale of stock and fixtures last November. There are about 500 creditors, of which the names of the largest were published Feb. 25.

The regular monthly meeting of the 24-Karat Club, of New York, was held Wednesday afternoon in the office of the Keystone Watch Case Co., 21 Maiden Lane. The business before the meeting was the election of an active member to fill a vacancy, and C. G. Braxmar was chosen. Following the regular routine business came the discussion of the next dinner of the club. At a former meeting it was suggested that a shad dinner be given some time in May, at which ladies would be invited. It did not seem advisable, however, that this dinner be given, as many of the members of the club would be out of town during May. Instead of this dinner a clam bake will be given some time during August at the Green Gables Hotel, Pleasure Bay, N. J. The committee to decide on the final date of this dinner is composed of W. I. Rosenfeld and C. F. Brinck.

John F. Parker, Middletown, Conn., Sued for $14,000.

MIDDLETOWN, Conn., April 10.—An attachment has been placed on the stock of goods in the jewelry store of John F. Parker on Main St., in the interests of Moses W. Terrill, of Middlefield, who has a claim against Mr. Parker for $14,000.

Mr. Parker began business several years ago with A. B. Ryan and Wyman Barrows, under the firm name of Ryan, Barrows & Parker. The firm was dissolved about a year afterward, when Mr. Parker formed a partnership with Mr. Story, which continued the business. In 1901 Mr. Parker bought Mr. Story's interest, and since then has conducted the business alone. It is understood that Mr. Parker is heavily involved. He has a great many friends here who very much regret his misfortune.

Notices have been sent out requesting the presence of the creditors of John F. Parker at a meeting to be held at the office of Attorney Clarence E. Bacon, Wednesday afternoon at 2 o'clock. It is said that Mr. Parker prefers to file a petition in bankruptcy. Some of his creditors would rather reach a settlement by the sale of his stock.

Where a principal prematurely terminates an agency, the right of the agent to compensation is not lost, and as to amount is to be measured by the contract. (35 S. E. Rep. 693).

Trans-Atlantic Voyagers.

FROM EUROPE.

Frederick J. Essig, Chicago, accompanied by his wife, returned Wednesday on the *Pennsylvania*.

R. Friedlander, of R., L. & M. Friedlander, New York, and Fred Goldsmith, of Ingomar Goldsmith & Co., New York, returned Thursday on the *Teutonic*.

TO EUROPE.

M. J. Averbeck, New York, will sail Saturday on the *Zeeland*.

John Kay, of Wright, Kay & Co., Detroit, will sail Saturday on the *Minnehaha*.

Ambrose Kent, of Ambrose Kent & Sons, Ltd., Toronto, sailed Tuesday for Genoa.

H. S. Oppenheimer, of Oppenheimer Bros. & Veith, New York, will sail to-morrow on *La Lorraine*.

Charles S. Untermeyer, of the Untermeyer-Robbins Co., New York, sailed Wednesday on the *Oceanic*.

Seth E. Thomas, of the Seth Thomas Clock Co., New York, accompanied by his family, sailed Saturday on the *Minneapolis*.

H. Michaelson and I. Michaelson, of J. L. Michaelson & Sons, Montreal, Can., and John A. Service, England, sailed Saturday on the *Umbria*.

Julius Spandau, of Spandau Bros., Pittsburgh, and Jacob Strauss, of Jacob Strauss & Sons, New York, will sail April 28 on the *Kaiser Wilhelm II*.

Fred W. Lewis, of Fred W. Lewis & Co., New York; E. M. Gattle, of Gattle, Ettinger & Hammel, New York; Chas. G. Rathgen, of Ferd. Bing & Co.'s Successors, New York; H. B. Zimmern, of Zimmern, Rees & Co., New York; Louis Schiele, of Wallach & Schiele, New York, accompanied by his wife; Sol Fox, of Fox Bros. & Co., Cincinnati, accompanied by his wife; Lawrence L. Moore, of Lawrence L. Moore & Co., Seattle, and Abraham Sickles, of M. Sickles & Sons, Philadelphia, accompanied by his wife and family, sailed, April 7, on the *Kaiser Wilhelm der Grosse*.

Where an insolvent debtor conveys property to a purchaser for value and the latter is in a position to know that such debtor is making the conveyance to delay, hinder and defraud his creditors, such conveyance will be avoided at the instance of the other creditors. (40 S. E. Rep. 439.)

The Best Location in the Country

Mrs. Dodge Loses.

Her Claim Overruled in Suit Against Jewels Seized by Treasury Department.

Judge Holt, in the United States District Court at New York, yesterday, granted a motion by United States District Attorney Burnett and Assistant United States District Attorney Baldwin to overrule the pleadings of Mrs. Phyllis E. Dodge, who is seeking to obtain from the Government a diamond necklace and jewelry, valued at about $40,000, which was seized from her June 26, 1899, when she arrived from Europe on the steamship *St. Paul.*

The motion was made on the ground that Mrs. Dodge had not shown sufficient reason in her pleadings why the jewels should not be seized by the Government. This contention was sustained by the Court on the ground that her pleadings did not sufficiently show why the diamonds should not be condemned and also on the record of the trial of the case on the appeal to the United States Circuit Court of Appeals.

In arguing against this motion, W. Wickham Smith, attorney for Mrs. Dodge, characterized the action of the District Attorney as a trick. He said that the United States Circuit Court of Appeals, when rendering its decision in 1901, had ordered a retrial, and with this understanding he had been working on the case for more than a year. Assistant District Attorney Baldwin declared that the United States Circuit Court of Appeals had not ordered a retrial, but had simply overruled Judge Brown, of the United States Circuit Court.

The Dodge case is familiar to the readers of THE CIRCULAR-WEEKLY. At the first trial before Judge Brown a verdict was rendered in favor of Mrs. Dodge, the Court declaring that no attempt at fraud had been proven on the part of Mrs. Dodge and that this was necessary in order to forfeit the jewelry. When the Government took the case to the United States Circuit Court of Appeals Judge Brown was overruled. Since that time Mrs. Dodge's attorney has endeavored to effect a settlement with the Treasury Department at Washington, but without result. The action of Judge Holt is equivalent to saying that the Government has a legal right to condemn in forfeiture the goods seized from Mrs. Dodge.

Coral Fisheries of the Kagoshima Sea.

IT is stated that the coral fishers in the Kagoshima Sea are engaged in a prosperous trade, which has apparently good prospects. During the past year, up to November, 30 boats were engaged in the fishery, and the amount of coral gathered during that period was valued at $10,260. Of this coral, about 998,709 pounds was of the pink variety, and 65,229 pounds of the red, and 1,530,745 pounds of the white varieties.

A coral shoal which was discovered last year near Tsuto Island is said to produce coral of the best quality, which is not inferior to that produced in Italy. This quality has realized about $55 per catty, which is equal to 1.33 1-3 pounds.

The Production and Consumption of Platinum

A FRENCH official report says the annual consumption of platinum in the world is estimated at 16,591 pounds. The demand for this metal is increasing in proportion to the development of industries in which it is indispensable and where platinum cannot be replaced by any other metal. The world produces only 12,983 pounds, leaving a deficit of 3,608 pounds, which is supplied by the recasting of old, damaged, out-of-date articles, utensils and instruments. Fourteen years ago there was scarcely any sale for platinum in Paris; since then the price of this metal has advanced continuously. Thus, from $94 per 2.2 pounds it has increased to $389 per 2.2 pounds, until in 1901 platinum sold for $453 to $500 per 2.2 pounds, raw and not refined. It will, in a short time, perhaps, reach the price of pure gold. The price will, however, remain stationary for some time, because gold will replace platinum in certain industries.

The tendency of the production of platinum is to decrease. In 1900 the Ural produced only 10,472 pounds, in place of the 12,983 pounds which the market expected. This is not astonishing, as the platinum mines in the Ural are concentrated on two small rivers and may easily become exhausted. One London house monopolizes all the platinum of the Ural, with the aid of its agents. Russia has no foundry for refining this metal, and it is exported raw.

Shantee Bros. have succeeded to the business of G. U. Wells, Hampton, Ia.

Traveling representatives may consider these columns open for the publication of any news or items of interest regarding themselves or their confreres.

Traveling men now in San Francisco, Cal., are: Harry Jacobson, Jacobson Bros.; Mr. Landram, Simons, Bro. & Co.

The following representatives visited Pittsburgh, Pa., during the past week: Wilbur C. Cook, Keystone Watch Case Co.; P. W. Smith, Roger Williams Silver Co.; H. C. Rowbotham, Untermeyer-Robbins Co.; B. Frank Hodgins, Snow & Westcott; Lewis L. Squire, F. H. Cutler & Co.

Arthur C. Macy left, Monday, on his first trip west in the interest of Henry E. Oppenheimer & Co., New York.

Henry Freund, of Henry Freund & Bro., New York, after spending a few days in New York, left again, last week, for the road.

Eastern traveling men in St. Louis, Mo., last week, were: William Plueger, Joseph Noterman & Co.; Robert S. G. Edwards, Whiting Mfg. Co.

George Wettstein, Cedar Rapids, Ia., visited San Francisco, Cal., last week, after passing through Portland, Ore., and other cities on Puget Sound.

Traveling men who called upon the trade in Indianapolis, Ind., last week, included: Mr. Bonnet, Heeren Bros. & Co.; Mr. Davis, R. H. Davis & Co.; Walter S. Strauss, Jacob Strauss & Sons; H. Fox, Goldsmith Bros.; E. E. Stockton, E. Ingraham Co.; William J. Tighe, Eisler & Laubheim.

Among the eastern representatives in Chicago, last week, were: Howard Rowbotham, Untermeyer-Robbins Co.; Jules Franklin, L. Tannenbaum & Co.; A. J. Sherrard, Enos Richardson & Co.

Among the representatives who visited Denver, Col., during the past week, were: R. L. Robinson, Dennison Mfg. Co.; J. Rothschild, Kaufman, Rothschild & Co. and Edmond E. Robert.

Frank Wettstein who, with his wife, returned to Cedar Rapids, Ia., from Mexico, last week, will start on the road for his father, George Wettstein, early in July, and will cover Minnesota, North Dakota, South Dakota, Montana, Nebraska and Kansas.

A. H. Cohn, western representative of Henry Froehlich & Co., New York, visited the Portland, Ore., trade, recently. Mr. Cohn was just finishing an eight weeks' trip in the west and reported business very good all along the Pacific Coast. The outlook is especially bright at Los Angeles, Cal.

Visiting the trade in Boston, Mass., during the past week, were: J. Townsend, Neresheimer & Co.; Chas. S. Isabel, Arnstein Bros. & Co.; Mr. Crane, Strobel & Crane; Frank Wood, Ludwig Nissen & Co.; G. J. Crampton, Jennings Bros. Mfg. Co.; Fred Clarkson, Albert Lorsch & Co.; E. Huhn, Fera & Kadison.

The Albany, N. Y., trade was visited by the following traveling men, during the past week: W. S. Tompers, L. Weil & Sons; Arthur H. Schmitt, Bippart, Griscom & Osborn; T. E. Bowne, E. Ira Richards & Co.; H. H. Holbert, C. G. Alford & Co.; E. Koehn, Jr., E. Koehn; H. H. Wile, Buffalo Jewelry Case Co.; Jacob Schorsch, I. Emrich & Co.; Frank H. Danna, H. A. Kirby Co.; Harry Warren, Julius King Optical Co.; M. B. Freeman, Dennison Mfg. Co.

The trade in Lancaster, Pa., was visited, last week, by the following: representative of Adolph Struss & Co.; Mr. Beckwith, Joseph Fahys & Co.; Mr. Cook, Keystone Watch Case Co.; J. H. Thompson, Keller Jewelry Mfg. Co.; A. Totten, Larter, Elcox & Co.; representative of Dennison Mfg. Co.; J. L. Brown, Henry Freund & Bro.; Leo. Henle, Sussfeld Lorsch & Co.; Michael Lambert, Henry Zimmern & Co.; Mr. Fake, Whiting Mfg. Co.; Mr. Seitz, Aiken, Lambert & Co.

E. H. Pudrith, who represents the Scribner & Loehr Co., Cleveland, O., with headquarters at Detroit, Mich., has branched out so that his territory now includes Michigan, Wisconsin, Minnesota, North and South Dakota. Three traveling men are required to cover the territory and they started, recently, as follows: W. G. Knapp, Wisconsin, Minnesota and the Dakotas; William H. Horton, Michigan; George Ruttman, Detroit and vicinity. Mr. Pudrith was at one time city salesman for the late Whitney Mfg. Co.

Among the representatives of wholesale houses who, recently, visited the trade in Detroit, Mich., were: C. Hickock, Gorham Mfg. Co.; H. C. Barnum, Shafer & Douglas; C. W. Smith, J. A. Whaley & Co.; P. M. Layman, Riker Bros.; Mr. Parker, Osmun-Parker Mfg. Co.; W. J. Carrow, Mandeville, Carrow & Crane; M. E. Van Bergh, Van Bergh Silver Plate Co.; John A. Abel, Abel Bros. & Co.; M. L. Barnard, J. B. Bowden & Co.; C. B. Bartlett, Whiting Mfg. Co.; S. C. Howard, Dominick & Haff; Jacob Schorsch, I. Emrich & Co.

Traveling salesmen calling on the Columbus, O., trade, during the past week, included: L. Zimmern, Zimmern, Rees & Co.; Ad. Heymann, Eagle Pencil Co.; Ernest A. Rose, Weigle & Rose; H. D. Sherrill, Sinnock & Sherrill; C. E. Bunker, Whiting & Davis; William G. Andrews, C. Sydney Smith; H. L. Sherman, Simpson, Hall, Miller & Co.; H. R. Blackman, Champenois & Co.; Robert B. Steele, Kohn & Co.; W. E. Welch, Hoyt, Obrig & Geiger Co.; W. L. Miller, Miller Jewelry Co.; V. A. Gebhardt, Gebhardt Bros.; Mr. Eschenburg, Juergens & Andersen Co.

The following traveling representatives visited Kansas City, Mo., last week: Lawrence H. Smith, Bippart, Griscom & Osborn; E. A. Reed, Reed & Barton; Fred J. Goster, Unger Bros.; William T. Smith, Wilcox Silver Plate Co.; Mr. Burgess, Maple City Glass Co.; Mr. Barker, Mandeville, Carrow & Crane; F. A. Priesmeyer, H. C. Hardy; Mr. Wood, Shepard Mfg. Co.; J. Keasler, Aurora Silver Plate Mfg. Co.; Jules F. Schuman, Jr., William Kinscherf; J. M. Friede, Eisenstadt Mfg. Co.; Mr. Smith, John Holland Gold Pen Co.; J. H. McGrail, Johnson, Howard & Piper Co.

Percy Lucas who, for the past five years, has covered Pennsylvania, New York and the New England States for the Mauser Mfg. Co., will, after May 1, travel from the Chicago office of the company through the western States. The eastern territory of the Mauser Mfg. Co. has now been divided into three sections, and will be covered as follows: C. B. Duckworth will take in Providence and the surrounding towns within 75 miles of the city; R. G. Toffey will cover New York, northern Vermont, New Hampshire, Maine, western Massachusetts and Connecticut, and Richard Woehlfer will cover New Jersey, Delaware, Pennsylvania and Ohio.

Representatives of wholesale houses who have been in St. Paul and Minneapolis, Minn., recently, were as follows: Mr. Reed, Reed & Barton; Fred Foster, Unger Bros.; Wm. Davidson, A. M. Donaldson & Co.; W. A. Schlossman, H. F. Hahn & Co.; Frank D. Sherburne, St. Louis Silver Co.; A. H. Schutrum, David Marx; S. K. Jonas, Jonas & Brod; T. C. Keys, L. E. Waterman Co.; A. M. Brinckle, Maple City Glass Co.; Thos. Hoefer, M. A. Mead & Co.; Mr. Buttle, Wm. Schimper & Co.; representative of the Chase Mfg. Co.; Mr. Gill, Ignatz Strauss & Co.; Mr. Putman, J. W. Tuft & Co.; G. W. Pearce, Bay State Optical Co.; Harry C. Cohen, Adolphe Schwob; B. Eichberg, Eichberg & Co.; Rudolph Noel, Albert Lorsch & Co.; L. E. Fay, R. F. Simmons Co.

Representatives of wholesale houses calling on Syracuse, N. Y., jewelers, during the past week, were: Jacob Schorsch, I. Emrich & Co.; T. E. Bowne, E. Ira Richards & Co.; Mr. Fox, Will & Baumer Co.; Alfred Goldsmith, Adolph Goldsmith & Son; Arthur Totten, Larter, Elcox & Co.; Mr. Lind, Harvey B. Kimmey; Mr. Parker, Osmun-Parker Mfg. Co.; S. Cohn, S. Cohn & Co.; William B. Tilton, Smith, Patterson & Co.; E. Shaw, P. W. Lambert & Co.; H. Carter, Mockridge Jewelry Co.; D. Skutch, New Haven Clock Co.; D. N. Jacoby, Providence Stock Co.; W. H. Smith, Winchester Optical Co.; Russell A. Talbot, Joseph Fahys & Co.; Le Roy Thompson, F. W. Sackett; Dan F. Pickering; A. M. Brinckle, Maple City Glass Co.; Joe Knobland, C. F. Monroe Co.; H. W. Thornton, McIntire, Magee & Brown; Mr. Waldert, E. Kirstein's Sons Co.

M. O. Stanley, formerly of Ponca, Okla., will engage in business in Knobnoster, Mo.

B. R. Imhof, Denver, Col., has given a chattel mortgage for $200 on his fixtures.

Wm. W. Jackson, a jeweler of Springfield, Mich., and Mrs. M. Dodge, of Springfield, O., were recently united in marriage at the home of the bride's cousin in Springfield.

Accused of smashing a plate glass window in Wm. S. Hoke's store, Winchester, Ind., and attempting to loot the place, Arthur Street was arrested last Wednesday and incarcerated in the local prison.

Frederickson & Lange, Racine, Wis., have dissolved partnership, Mr. Lange succeeding. Mr. Frederickson will go to the Pacific Coast in May and will locate there if he finds the country attractive.

Taliaferro Bros., who contemplated removing from Jackson, Tenn., to Athens, Ga., and who recently purchased the stock of S. R. Robertson, Jackson, have decided not to leave their old location, but will remain there and considerably enlarge their establishment.

Wm. H. Moyer was committed to jail last week, accused of larceny by M. T. Hagerty, a jeweler of Philipsburg, Pa., who declares that he sold Moyer two rings on the instalment plan, valued at $50 and $80 respectively, and that the latter disappeared without paying for them.

Claude S. Ritenour, who had been employed with E. B. Capper, Winchester, Va., was in Harrisburg, Pa., last week on his way to Lancaster, where he will take a course at a school of watchmaking and engraving. He will return to Mr. Capper's employ during the Summer.

James R. Harrison, a prominent jeweler of Stillwater, Okla., died in his store recently from alcoholism. He had been drinking heavily for some days, and death came to him while sitting in his chair. He had been in business for about 10 years and owned considerable property.

The first meeting of the creditors of R. W. Woodley & Co., Norfolk, Va., who were adjudicated bankrupt April 6, will be held next Friday in the office of Referee in Bankruptcy D. L. Grover, 511 Citizens' Bank Building, Norfolk. The creditors will then elect a trustee, examine the bankrupt and attend to other business that may come before the meeting.

Raymond Clinton Anderson, a young jeweler of Woodstock, Va., and Miss Ruby Belle Tolbard, of the same place, were the hero and heroine of a sensational elopement which culminated in a wedding at the Carrollton Hotel, Baltimore, Md., last week. Shortly after leaving Woodstock the young folks were missed, and police of most every city and town were notified to be on the lookout for them.

The Premier Diamond Mine.

THE Pretoria Premier Diamond mine continues to attract considerable attention, and at the present time the shares are steadily creeping up in value on the local market. In previous letters the growing importance of the Pretoria diamond fields has been dealt with, and since the flotation of the Premier mine and commencement of prospecting operations on the property the permanence of the Pretoria diamond fields has begun in many quarters to be recognized. The last published returns of the yield from the cuttings give 971 carats from 549 loads, each carat estimated to be worth about 25s. Whether the blue ground will maintain such a high yield remains to be seen, for although shafts have been carried down well into the blue, it is not, of course, possible as yet to treat it on such a scale as to afford sufficient evidence of its value. Not sufficient work has yet been done to test the full area of the mine; but, so far, about 1,000 claims have been proved, and it seems possible that the area may reach close upon 2,000 claims. Should this prove to be the case, the Pretoria diamond fields may assume a greater importance than at present seems to be realized. The washing operations carried on among the alluvial deposits in the neighborhood of the Pretoria mine, both by companies and private firms, continue to yield good results; and altogether the prospects of the ground worked to the north of the railway line, alluvial and otherwise, are highly satisfactory. With regard to the other diamond pipe discovered before the war, on the south side of the railway and situated close to Vander Merwe Station, another company has been floated to work the eastern half, extending on to the farm Kaalfontein—the western half for some time past worked by Schuller's still continuing to give fair results. The principal drawback to this pipe is the low value of the diamonds, but this is to some extent counterbalanced by the comparatively high yield per load.

The recently appointed manager of the Kaalfontein Diamond property reports as a result of his inspection of the property that there are probably two of the diamond pipes on the same farm, so that in addition to sharing the working of the proved diamond pipe with Schuller's Diamond Co., the Kaalfontein Diamond Co. hope to discover additional pipes. So far, the Pretoria diamond fields outside the washing operations can boast of two pipes and three diamond mines, but it is quite possible that other pipes exist beyond those discovered, and even if such should prove not to be the case the discoveries already made are quite sufficient to establish a valuable diamond industry.—*London Mining Journal.*

If a contract of sale is expressly made subject to the approval of the purchaser, or of some one for him, and such approval involves either judgment in matters of taste or personal opinion, the person whose approval is required is the sole arbiter; and if he really passes on the question and reaches a conclusion honestly his decision is conclusive, whether right or wrong. (90 N. W. Rep. 253.)

Carving Ivory and Meerschaum.

THE trade of the carvers in bone, ivory, meerschaum, and like materials has never fully recovered from the blow it received in the hard times beginning in 1893. There were then probably more than 300 such carvers working in this city. Many of them were driven out of the trade into other and cruder lines of carving, and only a few of those who thus changed their medium have been able to find work of the old kind. Only a very small part of those who do such carving belong to the class of true artists in ivory, bone, and meerschaum. Of such highly skilled carvers the whole number could probably be counted on the fingers of the two hands. The business grows very slowly. There are few native Americans who have mastered the craft. Possibly a single employing carver, a native American of German parentage, is the only one now engaged in the art. Only two skilled Japanese carvers are employed in this city, and no Chinese carvers have come to town. Most of those engaged in the art are Germans, though a few Frenchmen have worked here. The German-American referred to thinks that most Americans lack the patience to become skilled carvers. The American haste is antagonistic to the attitude of mind that the successful carver must maintain.

German carvers of taste and skill could earn much higher pay here than at home, and if more should come over they would find permanent employment, but they are not attracted by conditions here. On the whole, they can live more cheaply in Germany than here, and amid more congenial surroundings. Another consideration that deters the skilled carvers from coming to New York is the rumors they hear of disagreements between employers and employed, strikes, and trammeling union rules. They have a notion that trades union conditions here are such as to disturb the serenity of the artist. As a matter of fact, the artistic carver would probably be little disturbed by the wars of employer and employed, but the news that reaches Germany on this subject is alarming.

The skilled carver in this city usually makes his own tools, forges them in the workshop, tempers, grinds, and polishes them ready for use. The Japanese carvers use much the same tools, and almost exactly the same methods as the Germans who work beside them. The pay of the skilled carver is excellent—from $3 to $10 a day, according to the character of the work and the ability of the carver to impress his worth upon his employer. There are unions of the artistic carvers, but the ablest of them have no need of union aid in maintaining their rights.—New York *Times.*

Where a "general agent" to collect money receives in payment anything else than money, the creditor, so far as the debtor is concerned, is bound; but he is not precluded from refusing to receive such property from the agent, or from holding the latter liable for the amount of the debt. (36 S. E. Rep. 251).

Canada Notes.

Paul Bernier, Winnipeg, has removed to Somerset, Man.

The store, stock, etc., of John Skinner, Hamilton, Ont., was sold at auction, April 6.

Jacob Yake and wife, Toronto, have given a chattel mortgage to Annie Keffer for $110.

Fred Fawkes, Brantford, Ont., has given a renewal chattel mortgage for $3,000 to G. H. Fawkes.

Olmsted & Hurdman, watchmakers and jewelers, Ottawa, have dissolved and are retiring from business.

Chas. D. Demaurez, watchmaker, Fernie, B. C., recently gave a chattel mortgage for $1,300 to Mary E. Huse.

J. F. Higginbotham, Brandon, Man., has given a chattel mortgage for $4,674 to the National Trust Co., Ltd.

P. E. Poulin & Son, Quebec, have dissolved and a new firm has been registered under the same style, with Ernest S. Poulin as proprietor.

Sydney L. Kent, of B. & H. B. Kent, Toronto, left last week on a purchasing trip to New York, Attleboro and other American cities.

Charles Lapierre, Ottawa, has assigned to W. A. Cole for the benefit of his creditors. A meeting of those interested was announced for April 9.

Out-of-town buyers visiting the Toronto trade last week included: A. E. Swallow, Stayner; James Calder, Fergus, and Emil Pequegnat, Stratford.

J. H. Wells, representing the American Waltham Watch Co., was in Toronto last week on his return from a successful trip through western Ontario.

Ambrose Kent, of Ambrose Kent & Sons, Toronto, sailed for Genoa, Italy, from New York, yesterday, accompanied by his wife. He will make a tour of the leading European markets with the object of placing large orders for novelties and diamonds.

Albert C. Johnston, one of the firm of jewelers to open up a new establishment on St. Catherine St., Montreal, is ill in Kingston of typhoid fever. Mr. Johnston has been unusually busy closing out in Kingston and visiting New York, Montreal and Boston in the interests of his Montreal venture.

W. K. McNaught, president of the Toronto Industrial Exhibition, accompanied by a delegation composed of members of the Canadian Manufacturers' Association, members of the Board of Trade, members of Parliament, Senators and others waited upon the Government at Ottawa, recently, in support of a petition asking for a grant of $50,000 to the Toronto Exhibition for the present year. The Premier said it would be favorably considered, and that was taken to mean that the grant will be forthcoming. The jewelry and allied manufacturers are expected to be strongly represented at the exhibition this year.

Death of Richard H. Clark.

SHELBYVILLE, Ky., April 9.—Richard H. Clark, a well-known jeweler of this place, died suddenly at his home at 7 P. M. last evening. His death was due to pneumonia, which had followed an attack of erysipelas with which the deceased had been laid up about a week.

Mr. Clark was a highly respected citizen of this town, and his death is generally regretted. The deceased was born 45 years ago in Shelby County and had been in the jewelry business in this place for the past 12 years. He was unmarried.

Cheap jewelry fakirs, who make use of children to peddle their wares from house to house, have been operating extensively in the coal region towns in Pennsylvania. They were last heard of in Wilkes-Barre.

"As true as a Die."

How true IS a Die?

Whether die cutting is absolutely true or not depends on the PROCESS. A die cut by hand is necessarily imperfect,—even the most skilled hand and eye cannot work with absolute, unerring certainty. The

Automatic Die Cutting Machine

can and does—with MATHEMATICAL PRECISION. Moreover, it cuts fine dies in ONE-THIRD the time required by hand—saving wages and trebling capacity. And it finishes the die or hub WITHOUT RETOUCHING—the ONLY MACHINE that can do this. Adapted to large and small dies. Every machine guaranteed. All purchasers protected.

DUBOIS WATCH CASE CO.

Meeting of the Canadian Association of Opticians.

TORONTO, Can., April 11.—The semi-annual meeting of the Canadian Association of Opticians was held yesterday at McConkey's Restaurant, the proceedings being more of a social than a business character. Forty-three members sat down to a banquet provided by the jobbers in optical goods, the chair being taken by President W. G. Maybee, of St. Catharines.

Among those present were: H. B. Levetus, J. D. Isaacs, H. J. Geiger, B. Laurance, L. G. Amsden, E. C. Culverhouse, F. Claringbowl, M. M. Cohen, R. A. Mason, T. Coffin, W. H. Kearney, H. E. Lazarus, A. Moffatt, L. Strauss and F. E. Luke.

The usual loyal and patriotic toasts having been duly honored, a vote of thanks was unanimously passed to the jobbers for the entertainment furnished to the association. L. G. Amsden replied for the Cohen Bros. Co., B. Laurance for the Dominion Optical Co., and T. Coffin on behalf of the Montreal Optical Co. W. H. Kearney spoke urging greater activity in the organiz tion of local societies.

Alex. Moffatt, Brantford, secretary of the association, congratulated the members on the growth and prosperity of the association. What was needed was to make it a thoroughly representative body and to bring within its ranks all competent opticians. This was the day of organization and until the opticians were thoroughly organized they could not hope to obtain that measure of consideration accorded to other professions.

M. M. Cohen, of Cohen Bros., Ltd., made the suggestion that the backwardness in paying dues, which had been a serious difficulty in conducting the business of the association, could be overcome if the fees were collected through the jobbers.

President Maybee was pleased to see so large an attendance. Those present represented 50 per cent. of the total membership, which was a great improvement on any meeting previously held. The most important question which they had to consider was the need of legislation and what form an application to the Legislature for an act giving the association a legal professional status should take. There was no reason why the opticians should not be placed in the same position as the druggists and the dentists. The members of these professions had had to encounter considerable obstacles to obtain a recognition of their professional status, and the opticians had the benefit of their experience as to how to overcome these difficulties.

The first step toward obtaining legal recognition was to perfect their organization so as to bring in all competent opticians. To do this local organizations must be formed, and when the association was well organized throughout the country influence could be brought to bear upon the legislators. In order, however, to justify their claims for professional recognition, a thorough standard of competency must be maintained. The interests of the public must be safeguarded against ignorant and unworthy practitioners. Membership in the association ought to be a guarantee of education and competency. When practically all the qualified opticians were brought within the association and exhibited the true professional spirit by discountenancing imposture and quackery and discriminating against incompetent pretenders, it would not be a difficult matter to secure recognition from the Legislature. In the meantime the members should use every exertion to strengthen and build up the association and urge its claims upon those who still remained unaffiliated with it. (Applause.)

Mr. Maybee then read a paper upon the subject of "Legislation," after which the subject was discussed for about an hour.

A resolution was adopted to form a city organization in affiliation with the association.

Speeches were also made by E. C. Culverhouse, F. E. Luke, H. J. Geiger and Harold L. Batting, the latter speaker making the suggestion that it was preferable to appoint small committees rather than large ones, as when a large number of members were appointed on a committee the work was often done in a perfunctory way.

The executive committee was instructed to co-operate with the city organization to be formed and to report as to legislation at the annual meeting to be held in September next. A meeting of the executive committee will be held in a few days to organize the city association.

PHILADELPHIA
WATCH CASE CO.
RIVERSIDE, N. J.

Philadelphia.

John Lang, diamond broker, 719 Sansom St., spent the Easter holidays at Atlantic City.

Joseph P. Bechtel, 725 Sansom St., has returned from a pleasure trip to Detroit, Mich.

Thomas J. Campbell, with Wm. Morris & Co., returned Friday from an extended western trip.

J. Neill, jobber, 725 Sansom St., was elected secretary of the 24th Ward Sectional School Board last week.

Frank Kline, a Spring City, Pa., retailer, spent several days here last week making purchases for the Easter trade.

Samuel Goldstein's store, 321 Market St., was robbed Saturday of 29 plated watches and other goods valued at $120.

The Bailey, Banks & Biddle Co. made the handsome silver service presented last week to Select Councilman Wilbur F. Short.

Joseph Litchfield, 1926 Columbia Ave., is receiving the condolences of the trade on the death last week of his infant son.

Max Einhorn, watchmaker for M. Sickles & Sons, spent the Easter holidays in New York, combining business and pleasure.

Wilhelm Thoustrup, watchmaker, has resigned his position with J. E. Caldwell & Co. and accepted a place with C. R. Smith & Son.

J. E. Caldwell and H. B. Brazier, two prominent Chestnut St. jewelers, were granted licenses last week to operate automobiles.

Mrs. A. F. J. Dorn, proprietor of a Camden, N. J., jewelry store, sustained a painful injury last week, which confined her to the house.

James Orr, 13 S. 9th St., has been elected a member of the Franklin Institute and appointed to the important Science and Arts Committee.

Julius Scherer, watchmaker, has resigned his position with F. C. Bode, 1804 Market St., and has accepted a place with Weber & Bro., 2209 Front St.

An unsuccessful attempt was made Friday night to rob the jewelry store of C. Kibele & Co., 628 Chestnut St. A burglar alarm frightened the thieves away.

Hugh B. Houston, of J. E. Caldwell & Co., has issued invitations for the marriage, April 22, of his daughter, Mary Virchaux, to Raymond Clark Smith.

Ed Titus, formerly of the firm of B. F. Williams & Co., has bought out the interest of a Mr. Cleeland in the firm of Neld & Cleeland, willow ware manufacturers.

The Philadelphia Jewelers' Club is making preparations for the annual shad dinner to be given May 5, and held probably at a Delaware River resort, as in previous years.

William Wildemore, well known in the jewelry trade and formerly with the defunct house of L. A. Scherr & Co., has been appointed to a position at the Philadelphia Baseball Park.

William Wardel, whose store at 235 S. 10th St., below Walnut St., was sold out at auction recently, has opened a store in Ocean City, N. J., which he will conduct during the Summer.

Fred Patterson, a graduate of the Philadelphia Horological School, has accepted a position with C. A. Duncan, Massillon, O. C. A. Nicholson, from the same school, has gone to Quincy, Fla.

At the reorganization of Councils last week the desk of John W. Ford, a prominent E. Girard Ave. jeweler, was the recipient of many handsome floral pieces, presented by admiring friends.

F. M. Bracher, of Bracher, Becker & Barnett, Newark, N. J., is spending the Easter holidays at Atlantic City. It is reported that Mr. Bracher, who resides in Jenkintown, intends to open an office shortly in this city.

J. E. Caldwell & Co. exhibited in the show window of their store last week a magnificent silver tray and tea service presented to Clarence Taylor by members of the Philadelphia Stock Exchange for his work in erecting the new Stock Exchange building at 3d and Dock Sts.

Frank Thoman, watchmaker, has resigned his position with J. M. Saunders, 604 N. 2d St. and will hereafter devote his entire time to his new jewelry store, 715 Broadway, Camden, N. J. His place in this city has been taken by J. C. Shelden, formerly with E. A. Albertson, Bridgeton, N. J.

The suit of George C. Franciscus, a lawyer and representing the New York Jewelers Association and Board of Trade, as trustee against Harry Baerncopf, jeweler, to recover $1,000 paid to the defendant as a preferred creditor of Samuel Baerncopf, an alleged bankrupt jeweler, formerly in business on Sansom St., was tried in Court No. 5, last week, and a verdict for the defendant, under instructions.

William Ottkay, a jeweler formerly well

A.W.C.CO

American Watch Case Co.,

Manufacturers of Fine Gold Cases,

9-11-13 Maiden Lane,

New York.

known to the local trade and who until about two years ago had a store on South St., near 20th St., is employed in this city as a watchmaker.

Charles O'Connor, an errand boy, who pleaded guilty to the larceny of jewelry from S. Kind & Son, was sentenced to jail last week by Judge Biddle.

L. S. Douglass, watchmaker, Troy, Ala., spent the Easter holidays in this city visiting old friends and renewing his acquaintance with the local trade.

The store of Mrs. M. A. Drake, 7 S. 10th St., was entered by thieves last week and hundreds of gold pencils, pens and gold-mounted fountain pens, altogether valued at $1,500, were stolen. This is the second time this year the store has been robbed.

One of the important bills to the business community generally which was passed in the Legislature at Harrisburg last week was that "Prohibiting the disposal of property to defraud creditors and the removing of property out of a county to prevent the same from being levied upon or sold on execution."

The Muhr Case Co., to manufacture high grade gold and filled watch cases and novelties, has started in business at 618 Chestnut St., where the company has adequate floor space and the most modern equipment to facilitate the transaction of a large volume of business. Philip Muhr, formerly of H. Muhr's Sons and J. Muhr & Bro., and Joseph H. Sandman, comprise the company, the incorporation of which is to be speedily effected. Both Mr. Muhr and Mr. Sandman are widely known in the trade, not only in Philadelphia, but in the east, and Mr. Sandman has been in business 25 years, for many years traveling for various watch companies. The company has started with several large contracts and looks for a successful business career.

Pittsburgh.

TRADE CONDITIONS.

Business, which has been practically at a standstill in this territory for the past month, has taken a sudden spurt and both the wholesale and the retail dealers are enjoying a good trade. The Easter sales were gratifying and the jewelers are hopeful that they are the forerunners of a good Spring trade.

C. D. Stuart, formerly of Heeren Bros. & Co., is now employed by A. M. Andrews.

H. B. Hayes, of the Hardy & Hayes Co., accompanied by his wife, spent Easter at Atlantic City.

E. P. Roberts & Sons have just completed five handsome gold and silver medals for the Duquesne Ceramic Club.

Retail men from nearby towns who were in Pittsburgh during the week were: F. B. McKinley, Washington, Pa.; G. E. Medsger, Leetonia, O.; John A. Slonecker, Scio, O., and A. Merz, Sewickley, Pa.

Otto Heeren sailed on Saturday on the steamer *Trave* for Naples, to enter upon his annual European purchasing tour. Mr. Heeren has made 18 trips across the ocean to buy goods since he entered the jewelry business here.

Julius Spandau, junior member of Spandau Bros., 542 Smithfield St., will leave April 28 for Europe, where he will remain several weeks purchasing imported goods. Mr. Spandau will sail from New York on the *Kaiser Wilhelm II.*

A slight accident attended the removal of the stock of Durbin & Fuhr from the Penn Ave. house to their new establishment in 6th St. While taking one of the large cases in the new store room a plate glass window was struck and shattered.

Someone sat down on the sill in front of the show window of Edward H. Will's store, 107 Smithfield St., the other night, leaned back too hard and broke the plate glass window. Mr. Will was compelled to put in an entirely new window.

Benjamin Miskey, a peddler, who sells jewelry from door to door, is missing, and his mother, Mrs. John Miskey, of 32 Townsend St., has applied to the police for aid in finding him. Miskey is 32 years old and left home Wednesday, having just returned from Harrisburg. He was attacked near Harrisburg and robbed of his goods, beaten and left unconscious by the highwaymen. He was removed to a Harrisburg hospital, where he remained for some days in charge of the police authorities. The loss of his stock preyed heavily upon his mind and his mother thinks that this may account for his disappearance.

The wife of Eugene R. Muller, Batavia, N. Y., died recently at her home, 9 Tracey Ave., after a lingering illness.

Annie Numetka was arrested in Mount Carmel, Pa., recently, accused of larceny by H. C. Griesinger, a jeweler of that place.

You may stick it in a corner of your show case, but you can't ***hide*** it. The

Crown Filled Case

always asserts itself, though it be one of twenty in a mixed lot. The eye seeks the most beautiful in the bunch, and the ***Crown*** is sold whenever it is given half a chance. . . . . .

VOL. XLVI. CHICAGO, WEDNESDAY, APRIL 15, 1903. No. 11.

Chicago Notes.

E. E. Reynolds, with C. H. Knights & Co., left Monday for the road.

S. J. Son, diamond importer, returned last week from a two weeks' trip to New York.

M. Strickland, of Strickland & Co., Fond du Lac, Wis., visited the Chicago trade last week.

L. Seligman, of the L. Seligman Jewelry Co., leaves for a trip through the west this week.

Ed Swartchild, of Swartchild & Co., left Monday for a six weeks' trip through the south.

Mr. Fienberg, of Sloan & Fienberg, Ironwood, Mich., placed orders at this market last week.

F. J. Essig has arrived in New York from Europe and is expected to reach Chicago this week.

Luther R. McCain, Delphi, Ind., spent a portion of last week visiting his old friends in this city.

Will Manheimer, of Louis Manheimer & Bros., has returned from a three weeks' western trip.

E. P. Sundberg, Fargo, N. D., spent a few days last week in Chicago looking over the various lines.

L. W. Williams and Sam Amberg, with Norris, Alister & Co., leave for their territories this week.

C. J. Roehr, western representative for the Bassett Jewelry Co., left last week for a southwestern trip.

Mr. Bailey, of the Bailey, Banks & Biddle Co., Philadelphia, Pa., spent a portion of the past week in this city.

J. T. Homan, of the Homan Silver Plate Co., spent a few days of last week at the local office of the company.

A permit was issued last week to C. D. Peacock to build a two story private barn at 151 Astor St., to cost $1,700.

E. M. Lunt, manager of the local office of the Towle Mfg. Co., returned Saturday from a business trip to Memphis, Tenn.

J. K. Caldwell, representing factory "L" of the International Silver Co., returns this week from a visit to Baltimore, Md.

Fred Eisenmann, for several years of the office force of Schrader-Wittstein Co., will in future call on the local trade for that house.

C. A. Marsh, of C. A. Marsh & Co., Attleboro, Mass., who has been making a pleasure trip through California, stopped over in this city a few days of last week on his way east.

Mr. Goldsmith, of Goldsmith Bros., refiners and assayers, returned early last week from a shooting trip on the Kankakee marshes.

H. Sweet, of the R. F. Simmons Co., stopped over in this city a few days last week while en route home from a California pleasure trip.

S. Glickauf & Co. will move from their present quarters in the Stewart building to a new store in the Trude building, Randolph St. and Wabash Ave., about May 1.

Word has been received here that "Ed" Wixson, with C. S. Allison & Son, Owosso, Mich., has been seriously ill for several weeks, but is now on the road to recovery.

At the first meeting of the creditors of Drackett, Clock & Jehlinger, which was held on Wednesday, the Chicago Title and Trust Co. was elected permanent trustee.

J. P. Balsley, formerly a retail jeweler in this city, who gave up business in 1894, filed a voluntary petition in bankruptcy last week, with liabilities of $10,028.70 and assets of $96.

Mr. Kaufman, Attica, O., brought his young son, who was recently badly bitten by a dog, to this city for treatment last week. Incidentally Mr. Kaufman called on his old friends in the trade.

W. B. Oelze, Cloverport, Ky., was in this market last week buying the stock for his new store. Mr. Oelze spent several days looking over the various lines, and left Friday night for his home.

Spies & Co. have moved from the 15th floor of the Champlain building and are now located in their new quarters in the Powers building, 156 Wabash Ave. New machines of the latest designs have been installed.

The Calvin Clauer Co. has arranged to enlarge its space in the Columbus building. New fixtures are being made and will be installed about May 1, when the company takes possession of the enlarged quarters.

"Lem" W. Flershem, of Lapp & Flershem, who has been ill with a bad attack of la grippe, has left for a few weeks' recreation and will visit Jamaica and the West Indies. H. M. Tenny, with this house, leaves this week for his territory.

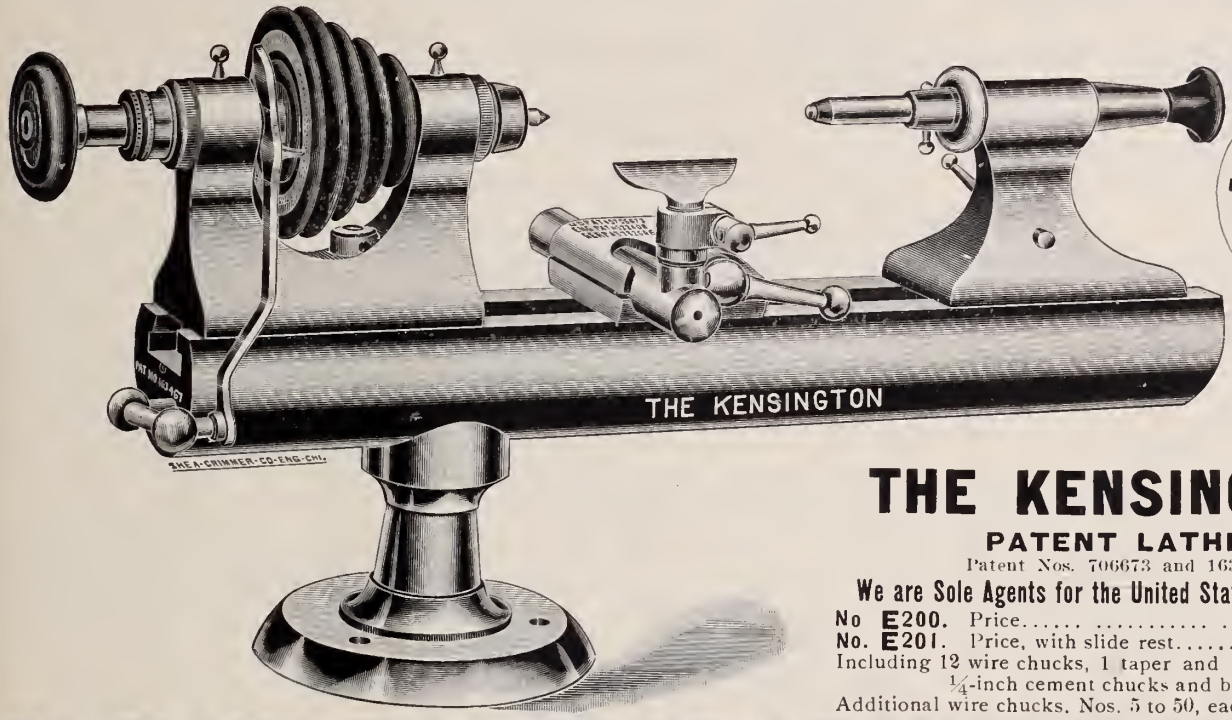
The Columbus Jewelry Co., Chicago, was incorporated on Thursday, with an authorized capital stock of $2,500, to manufacture, buy, sell and deal in jewelry. The incorporators are William E. Church, Robert McMurdy and Roger Sherman.

Miss Estelle Margaret Parks, daughter of H. S. Parks, buyer for Lapp & Flershem, was married Thursday night to Frank C. Steen, manager of the Chicago Club. The wedding was an elaborate affair and was held at the home of the bride. The Rev. Dr. C. St. Drake officiated.

Among the buyers in this city last week not elsewhere mentioned were: Nathaniel Jacobs, Ironwood, Mich.; H. A. Bromberg, Battle Creek, Mich.; E. L. Thayer, Rockford, Ill.; A. E. Wuesteman, Champaign, Ill.; E. A. Sigler, Crown Point, Ind.; John Derring, Stewardson, Ill.; F. W. Mitchell, Leaf River, Ill.

Will F. Juergens, of Juergens & Andersen Co., who, in company with Louis Bruns, has been calling on the trade in the latter's territory, returned last week after a very successful trip. H. A. Reinhard, traveling for the same concern, was detained in this city the past two weeks on account of the death of his mother.

F. E. Hyatt, western manager for the Philadelphia Watch Case Co., and Miss Arabella Drew Aiken will be married tonight, at 8 o'clock. The wedding will be a quiet home affair, only relatives being present, and will be held at the residence of the bride at 216 E. 47th St., this city. Mr. Hyatt is well known to the western trade.



Burgars forced an entrance to the home of Bernard J. Hagamann, a jeweler, 5249 Fifth Ave., early on the morning of April 1 and stole $200 worth of silverware and jewelry. The theft was reported to the police, but no arrests were made. The police denied that they knew of any burglary in Hagamann's home, but the jeweler said he gave them a detailed report of the robbery.

Three weeks ago H. R. Rumsfield, one of the staff of the local office of the Towle Mfg. Co., had his flat robbed. For some unknown reason, he expected a return visit and procured a revolver. Sunday evening, April 5, as he was standing on his back porch he noticed a flickering light in the flat adjoining his, which is occupied by his mother, whom he knew to be then out of town. Mr. Rumsfield waited long enough to be positive a strange man held the light, and then proceeded to open fire on the intruder with his new gun. As a result the burglar, whose pockets were found to be bulging with plunder, is in the City Hospital, where he lies at the point of death.

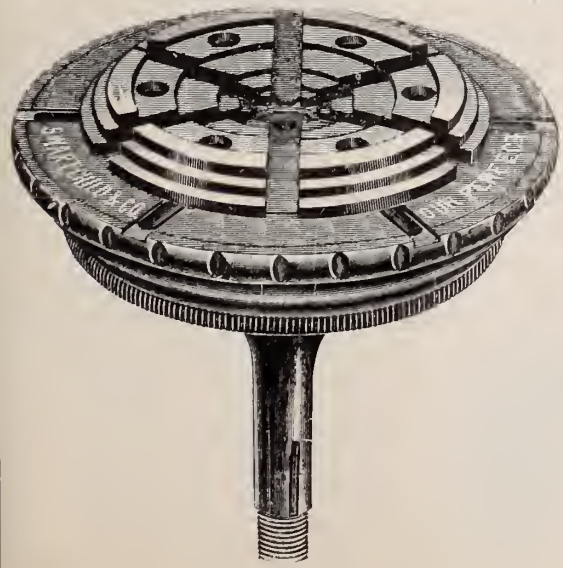
ESTABLISHED 1870. ESTABLISHED 1870.

SWARTCHILD & CO., Jewelers Building, 134 & 136 Wabash Ave. Chicago, Ill.

Our Kensington No. 2 excels all makes in advancement; its practical improvements are appreciated by progressive "watchmakers." A solid bed lathe can be sent on approval. Each lathe guaranteed absolutely. Interchange with Webster-Whitcomb.

Our 700-Page Catalogue sent upon application. SUPPLEMENT No. E

THE KENSINGTON
PATENT LATHE.

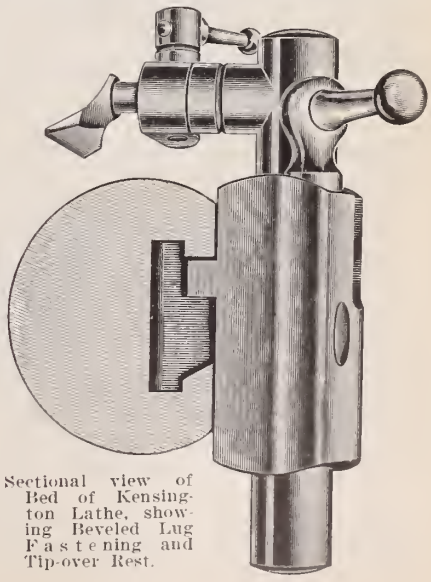


Patent Nos. 706673 and 163467.

We are Sole Agents for the United States and Canada.

No E200. Price..... .....$27.50
No. E201. Price, with slide rest..... 43.50
Including 12 wire chucks, 1 taper and 1 screw chuck, 6 1/4-inch cement chucks and belting.
Additional wire chucks, Nos. 5 to 50, each $0.50

"THE KENSINGTON" is equipped with all the latest patented improvements which must be seen and tested to be appreciated. Particular attention is called to the style of fastening the Rest, Head and Tailstock to the bed of Lathe. These attachments are fastened by means of a beveled lug (see sect. view), which will always bring these parts in perfect alignment. With this improvement the lathe must remain in perfect line, something which can never be maintained in the old-style shoe fastening. Another special feature is the Sliding Tip-Over Rest which can be adjusted to all positions and can be tightened with one motion of the hand.



"OUR PERFECT" COMBINATION BEZEL, WHEEL AND PLATE CHUCK.

Will hold any size of case bezel, watch or clock wheel or other large work. It takes the place of a full set of ten wheel chucks.

Mounted on taper chuck to fit:
Webster-Whitcomb Lathe,
Moseley Number 2,
Moseley Number 1 x 2.

No. E216. Price..... ... $8.50

The R. J. Hillinger & Co. Silk Guards.

Kansas City.

Ed. E. Burlingame has been elected Alderman at Argentine, Kan.

J. R. Mercer is putting up new awnings and improving the front of his store.

Julius Whiteman, with Emery, Bird, Thayer & Co., has been sick for a week.

J. R. Mercer and wife expect to start presently for a pleasure trip to California.

C. E. Waters, formerly optician with the Geo. B. Peck Dry Goods Co., is now with Gurney & Ware.

V. G. Cuthbert, with Otto Young & Co., Chicago, is spending a short vacation at his home in this city.

Mrs. Snow, cashier for J. R. Mercer, has just returned from a 10 days' stay at Excelsior Springs, Mo.

Margolis & Metzer expect to begin mailing their new catalogue about May 1. It is handsomely gotten up and will have about 500 pages.

H. E. Massa and wife, St. Louis, Mo., have returned home from a 10 days' visit to this city, where Mr. Massa is interested in a coffee and spice business.

Otto Knaul and E. H. Snow, traveling representatives for Woodstock, Hoefer & Co., were in town for a few days, but have again started on their respective trips.

Mr. Raphael, of the Streicher Watch & Jewelry Co., has left on a purchasing trip to New York. The company intends to put in new show windows in the near future.

Thieves recently entered the store of Leslie White, Lees' Summit, Mo., and managed to work the combination of the safe, from which they took all the money and valuables.

Mr. Cavanaugh, jewelry buyer for the Geo. B. Peck Dry Goods Co., is now temporarily assuming the role of optician, left vacant by the resignation of Mr. Waters, until he can procure the proper man to fill the position.

The following out of town merchants visited this city last week: S. M. & J. M. Coffman, Polo, Mo.; G. A. Howe, Duncan, Ind. T.; Otto Burkland and wife, Osawatomie, Kan.; J. B. Hayden, Topeka, Kan.; Wm. Glick, Junction City, Kan.; Wm. Rowe and F. S. Hester, Lawrence, Kan.

J. E. Frost has moved his stock into more commodious quarters in Davenport, Ia.

Chas. C. Raddatz, Waseca, Minn., who recently sold his entire stock at auction, will not retire from business as reported, but will install an entirely new stock.

Sol. Goldberg, a diamond dealer of Danville, Ill., was robbed of $400 worth of diamonds recently on a south-bound Chicago and Eastern Illinois passenger train, just as the train was nearing Oakdale.

Detroit.

TRADE CONDITIONS.

Detroit retail jewelers are having a steady trade and a considerable increase in business is expected in May and June, the wedding months. Easter novelties and staples moved satisfactorily, two firms reporting that trade is up to the high standard set last year. As an indication of the prosperity which has come to local jewelers, attention is called to the fact that there have been no failures of any importance for five years.

Roehm & Son last week filled an order for 57 gold medals for the glee, banjo and mandolin clubs of the University of Michigan, Ann Arbor.

Henry C. Briggs, well-known to Detroit wholesale jewelers, and who had frequently been called the pioneer jeweler of the Sixth Congressional District, died last week of influenza at his home in Howell, Mich., aged 80 years. He was born in England and was engaged actively in the jewelry business at Howell for 47 years, having learned the trade in the Old Country. He leaves a widow, two sons and two daughters.

St. Louis.

TRADE CONDITIONS.

The wholesale trade continues to be very good, but it is not quite as active as it was two weeks ago. The retail trade was dull during the past week, owing possibly to its being holy week. The retailers look for a good trade next week. From now on business should be brisk.

Joe McKenna, of the Bauman-Massa Jewelry Co., is back from an eastern trip.

Very few out-of-town jewelers were in this city last week. Next month the wholesalers look for them to come in large numbers. Last week's visitors included: Mr. Wilbur, of Wilbur, Lamphere Co., Galesburg, Ill.; B. L. Buley, Monett, Mo.; S. O. Harvel, Litchfield, Ill.

Indianapolis.

Horace A. Comstock is bird shooting on the Kankakee River, Ind.

Out-of-town visitors to this city last week included: Chas. M. Hunnicutt, Rockville, Ind.; J. W. Thompson, Danville, Ind., and B. Maier, Edinburg, Ind.

L. D. Thoelecke, formerly in business at North Platte, Neb., has moved with his family to Omaha.

H. H. Poukey has added a stock of jewelry to his pharmacy business in Cumberland, Wis.

A fire which started in the Post Office building at Sibley, Ill., a short time ago, considerably damaged the china stock of W. F. Burkhardt.

ILLINOIS College of Engraving CHICAGO, ILL.

Teaches everything that pertains to the art of

Monogram and Letter Engraving

on Silverware and Jewelry, at small cost and in the shortest possible time. *Descriptive booklet and designs sent free on request.*

Illinois College of Engraving,

Dept. A, No. 1010 Masonic Temple, CHICAGO.

A. J. CLOW, Proprietor.

Minneapolis and St. Paul.

Emil Kerner, with E. A. Brown, St. Paul, was married last week.

S. Gittelson, Minneapolis, has established a loan office and jewelry store at 9 S. 5th St.

J. B. Bodford, Minneapolis, has engaged the services of Dan Donaldson as watchmaker.

R. B. Wegner has relinquished his office in the Ryan block, St. Paul, and hereafter will have headquarters at his residence.

Julius Anderson, Mora, Minn., was a visitor to the Twin Cities last week. He is preparing to visit Europe during the coming Summer.

Jacob S. Cohen & Co., St. Paul, had all their traveling men in for Easter week. Mr. Cohen has just returned from a short trip to Duluth.

F. C. Worrell, Minneapolis, has retired from business. G. F. Meier has bought the fixtures and will engage in business in Winona soon after May 1.

Among the country dealers who visited Minneapolis and St. Paul last week were: A. F. C. Angliss, Dickinson, N. D.; Mr. Segerstrom, Crystal Falls, Mich.; Wm. Grau, Hankinson, N. D.

It is now stated that the actual loss in the robbery of S. Jacobs & Co., Minneapolis, was $696, seven stones having been taken, three of which have been recovered from a pawnshop in St. Paul. Benjamin Gates, a St. Louis negro, has been indicted for the theft.

Pacific Coast Notes.

M. A. Ray, Lakeport, Cal., was in Lower Lake last week selling a stock of jewelry.

Emile P. Segret, Dinuba, Cal., was married last week to Mrs. Cornelia Hennessy, of Sonora.

E. K. Miller, Kern, Cal., has purchased a handsome residence at the corner of K and Inyo Sts.

W. F. Hasinger and family have located at Los Angeles, Cal., from Indiana County, Pa. Mr. Hasinger will open a jewelry store there.

A. H. Rogers, for many years engaged in the jewelry business at Cleveland, O., has located in Pasadena, where he has opened a first class store.

S. R. Zwetow, Denver, Col., and wife, who for the past three months have been at Redlands, in Southern California, have left for their home via San Francisco, Cal.

The big store of Maurice Friedberger & Co., Stockton, Cal., is now in the hands of the mechanics undergoing some substantial improvements, the most important of which will be the installation of new and modern show cases.

After several weeks spent in preparations the fine new store of Rich & Voss, on 13th St., Oakland, Cal., has been opened for business. The optical department, which will be a very important branch of the new business, is in charge of Prof. M. Thomas.

The store of Thene & Wykhuss, Oostburg, Wis., was entered recently by thieves, who blew open the safe. A number of valuable rings were secured, but the vandals were discovered and fired upon before obtaining the cash in the safe. They made their escape.

TRADE CONDITIONS.

Business among the retailers is beginning to open up after a long siege of inactivity. Reports from the traveling men throughout the State are that trade is still dull, but shows signs of improvement. The interior portions of the territory are in a prosperous condition.

Sam Dickson, Fortuna, Cal., recently visited the trade in this city

S. Fred Hollander, Eureka, Cal., was in town last week on business and pleasure.

Philip W. Clark, Mountain View, Cal., is now in the city on business.

Emile Hirschfield, of E. Hirschfield & Co., has been sick for two weeks.

O. F. Westphal, Alameda, Cal., was in town last week replenishing stock.

C. V. Mount, of Mount & Ross, Petaluma, Cal., spent a few days in this city last week.

Frank Lewis, of Lewis Bros., Pleasanton, Cal., was in town a few days of last week making purchases.

James Rowe, of Rowe Bros., Chicago, accompanied by his daughter, is now in this city on a pleasure trip.

Fred Roth, with M. Schussler & Co., returned recently from his diamond purchasing trip to Amsterdam.

William Gruber has moved to a new store a block below his old quarters on Eddy St., on the opposite side of the street.

James W. Pembroke, traveling salesman for Nordman Bros., will shortly be married to Miss Pascoe, of East Oakland, Cal.

F. T. Sargent, formerly of Cloverdale, has moved to Santa Rosa, Cal., and is now in this city, making additional purchases for his new store.

E. Wittnauer and his representative, Fred Wilkinson, are visiting the Pacific Coast and are now registered at the Occidental Hotel, this city.

A. J. Lyons, a jeweler at the Transvaal Diamond Parlor, on Market St., has started a bi-weekly jewelry trade journal called the *Pacific Goldsmith*.

Walter Campbell, local representative of the Elgin National Watch Co., has been transferred to the Chicago office. J. Marsh of Chicago will take his place.

Col. A. Andrews is in receipt of a highly prized crystallized nugget of gold, which was sent down from the Tansy pocket mine, near Sonora, in Tuolumne County. It is valued at $1,000.

David Marshall, with the W. K. Vanderslice Co., is the father of a bouncing baby boy. Fred Ward has severed his connection with this store to take up a position in an eastern house.

Joe Leudan, with Adolph Eisenberg & Co., has left on an eastern trip to make purchases for that company. J. C. Feige, with the same company, has just returned from his northern trip.

Cliff Cummings, of Cummings' Sons, after having returned from his store in Pacific Grove, has been suddenly called to take charge of the firm's store in Cloverdale, on account of the illness of the man in charge there.

Arnold Sohr, a jewelry salesman of this city, disappeared a short time ago, taking with him two diamond earrings, valued at $600, and belonging to William Wolfsohn, a diamond broker at 637 Clay St. Sohr sent his wife, a bride of three months, and his mother-in-law to the matinee and in their absence made his preparations for departure.

A movement is on foot to form a wholesale jewelers' association in this city. The first meeting will be held April 18 at the office of Rothschild & Hadenfeldt, 134 Sutter St. The association will be similar to those in New York and Chicago, and is for the mutual, financial and social benefit of the wholesalers. The committee in charge is composed of C. Hadenfeldt, A. Judis and J. A. Young.

MONEY IS NO GOOD UNLESS IT EARNS MONEY.

Goods bought right are half sold. Our competitors are trying to drive us out of business by telling the manufacturers and importers not to sell us any goods as we are price cutters. **Yes, we do cut prices.** Here are some instances:

Our Peerless Brand all size watch screw drivers N. P., **5c.** each.
Elgin, Waltham, Hampden or any other make 7J. Grade Balance Staffs, **75c.** doz.
Same, fine polished for 15—17 and 21 J., **$1.00** per doz
Peerless Brand Cock and Foot Jewels for all makes, **$1.00** per doz.
Peerless Roller Jewels for all make watches, **20c.** per doz.
Peerless Pivot Drills, **20c.** per doz
Fine Alum. Straight or Riding Temple any size Eye Frames, **$1.75** per doz.
Same in Cable, **$3.00** per doz.

Above staffs and jewels are guaranteed to fit. Not any cheap imitation goods. Above prices are net cash with order. Money refunded if not satisfactory. Write for our confidential discount on general line. Watch for our low prices every month in this paper. Mail all orders to

Pacific Northwest.

TRADE CONDITIONS.

Wholesale houses report that the country trade is holding up in fine shape; much better than city business. There is still some complaint about the slowness of eastern manufacturers in filling orders; especially is this true in regard to optical and watch—both case and movement—lines. The Portland trade was somewhat light, last week, except in novelties appropriate for the Easter season. Novelties in royal copper enamel are finding a good market in Portland.

M. L. Pershall, Spokane, Wash., has removed to 109 Howard St.

D. Thompson, La Grande, Ore., is confined to his home by illness.

John L. Cline, Portland, Ore., has removed to 291 E. Morrison St.

N. M. Parson, late of Illinois, has opened a watch and clock repairing shop at Vale, Ore.

R. G. Colvin, formerly of Hastings, Neb., will shortly open a new store at Everett, Wash.

The only time ball now operated on the Coast is located on the ferry building at San Francisco, Cal.

There is a rumor that Burnett Bros. will remove their stock of jewelry from Republic to Chehalis, Wash.

In keeping with the Oregon weather, A. N. Wright, Portland, Ore., has a window display of fancy thermometers and barometers.

The United States Branch Hydrographic Office will probably place a time ball on the Federal building in Portland, Ore., about July 1.

Byron T. Lee, Grants Pass, Ore., has returned from Happy Camp, and brings word that he has taken up three claims of jade which are located near that place.

Butterfield Bros., Portland, Ore., have just completed a handsome watch charm for a member of the Order of Elks. Two highly polished elk teeth are joined with a half-inch gold band which bears a small blue enamel clock dial on the lower half and a finely carved elk's head above.

A number of smooth swindlers are now working in the northwest territory with "phony" jewelry which is said to be the most deceptive bogus stock ever circulated. The only way the swindle can be detected is by mutilating the goods. The alloy is not affected by acids such as are generally used in gold tests.

Cincinnati.

The Emrie Optical Co. has engaged H. Hawthorne to visit the local trade.

John Herschede, of the Herschede Hall Clock Co,. is making a visit to the northwest.

Strueve & Co., who recently opened up a new store at Race and Shilito Sts., are selling out at auction.

J. G. Reeves, the new traveler for Gebhardt Bros., starts out this week and will cover the southern States.

Bert Ganz, of the Gustave Fox Co., is touring the Indiana towns, while Mr. Schooler is out through Illinois.

Eugene Frohmyer, western traveler of L. Gutmann & Sons, has the sympathy of his friends in the accident that befel his young son, who broke his leg while playing.

Among the jewelers who visited Cincinnati last week were: Frank Taylor, Carlisle, Ky.; D. A. Lamb, Wilmington, O.; J. H. Drake, Lebanon, O.; J. O. Barnet, Troy, O.

The auction of the stock of Duhme Bros. & Co. saved from the recent fire will probably start this week. The firm has been trying to arrange to occupy its new quarters at 138 and 140 E. 4th St. earlier than the proposed date, as the partners want to be settled before May.

The window smasher was again in this city, and this time D. Jacobs & Co., 605 Race St., were among his victims. The large plate glass window of the jewelry store was broken by a brick and about $150 worth of watches, rings and fobs were taken. There is no clew to the thief.

Mr. and Mrs. Chas. Duhme are in New York awaiting the arrival of their nephew, Moses Fowler, who is being brought home from an asylum in France, under the care of detectives sent by his father, who lives at Terre Haute, Ind. The young man is heir to a very large fortune left to him by his grandmother, who is the mother of Mrs. Duhme. Mrs. Duhme has been appointed guardian of the young man by the Hamilton County Courts.

E. SCHWARZ & CO.

Classifications, appendices and index occupy the remaining 34 pages.

The Jewelers' Circular Publishing Co.,

11 JOHN STREET,

Corner Broadway, NEW YORK.

Optical Notes and Briefs.

W. H. Podesta, optician, Philadelphia, Pa., is reported to be critically ill.

Miss Davis is now optician for Jones Bros. & Co., Kansas City, Mo.

R. Reed Gwillim has opened an optical office at 33 N. 9th St., Meriden, Conn.

Douglas Shepard has started an artificial eye manufacturing business in Taunton, Mass.

H. A. Gross, optician, Philadelphia, Pa., now has five stores in various sections of the Quaker City.

A postponed meeting of the Central New York Optical Society will be held in Syracuse, N. Y., next Wednesday.

J. W. Terry, optician, formerly with Gurney & Ware, Kansas City, Mo., is now with Rothschild & Co., of that place.

Otto Housemann & Co., 705 Chestnut St., Philadelphia, Pa., have now entirely completed extensive alterations to their store.

Andrew Brown, son of D. V. Brown, wholesale optician, Philadelphia, Pa., was presented by Mrs. Brown with an heir last week.

The Standard Optical Co., Geneva, N. Y., will shortly increase its capital stock to the amount of $50,000. The new stock issued will be preferred.

Dieudonne Pinsonault, formerly in the employ of the American Optical Co., Southbridge, Mass., died last week of heart disease, aged 45 years.

A. B. Smith & Co., Haverhill, Mass., intend to move their optical department over their jewelry store. There will be entrances to the new rooms from the street as well as from the store.

S. W. Lindsay, optician and jeweler, Omaha, Neb., has greatly increased the facilities of his optical department. He has remodeled the whole room, put in electric lights and added all the modern optical appliances.

Reece B. Oberteuffer, a former optician of Detroit, Mich., died last week at his home, 123 Alger Ave., after suffering for some time from a complication of nervous diseases. Mr. Oberteuffer is survived by a widow and one son.

Edw. L. Davis, son of Oron V. Davis, Pulaski, N. Y., has just received the degree of Doctor of Optics from the South Bend Optical College. Mr. Davis is now taking a special course in the Rochester School of Optometry.

Frederick F. Mesmer, who for several years has been with the Bausch Optical Co., Syracuse, N. Y., will open optical parlors about May 1, occupying half of the new jewelry store to be opened at that time by Fred. F. Mead at the corner of E. Railroad and Warren Sts.

Henry W. O'Bryant, optician, Dayton, O., was a recent visitor to Troy, O., where he was seeking desirable quarters for an optical establishment.

The sale of the assigned real estate of E. L. Egolf, optician, Harrisburg, Pa., took place last week in front of the court house and most of the properties were knocked down for an amount approximating $5,000.

James Tait, optician, Philadelphia, Pa., has purchased the triangular property at the N. W. cor. of 17th St. and Ridge Ave., on the site of which he is having built a handsome two-story brick store building, to which, when finished, he will remove his business.

I. Orkin, of Orkin & Fletcher, opticians, Shenandoah, Pa., who recently brought suit against two 12-year-old girls whom he accused of stealing two pairs of gold-rimmed spectacles, has just received the value of the spectacles from the girls' parents. It is said that pilfering has become a common nuisance in that town.

Chas. F. Prentice, 178 Broadway, New York, last week received as a gift from the American Optical Co., Southbridge, Mass., a handsome trial case, which had been specially made for him. The lenses are all mounted in gun metal, and the numbers are larger than usual and are gilded, so as to be easily read in the dark room. The case has also several other novel and useful features.

Richard B. Kleine, 34 years old, son of Chas. B. Kleine, manufacturer of optical instruments at 129 W. 32d St., New York, died in the New York Hospital last week from a fractured skull received two days before by falling down the stairs of the factory. The funeral took place Wednesday, from his late home, 328 W. 34th St. Interment was in Evergreen Cemetery, Brooklyn.

The Buffalo Optical Society of Western New York, Buffalo, N. Y., has elected officers for the ensuing year as follows: Ernest V. Syrcher, president; John Wagner, first vice-president; William Montgomery, second vice-president; Roger F. Williams, secretary; H. B. Wickens, treasurer; F. F. Shaw and Joseph Schmid, Jr., members of executive committee. The society starts off with a membership of 35. The rendezvous of the club is the Central Y. M. C. A.

B. B. Harris has discontinued business in Morrillton, Ark.

Omaha, Neb.

TRADE CONDITIONS.

Wholesale trade, this Spring, is about on a par with that of last Spring. Retailers generally state that trade is rather quiet.

J. T. Nace, an old-time jeweler of Hamburg, Ia., died last week.

A. Freeman, Randolph, Ia., was in the city last week replenishing stock.

E. A. Dayton has just returned from a successful trip to the Black Hills.

A. T. West, Tabor, Ia., was in Omaha last week purchasing a new line of goods.

Sol Bergman, of the Sol Bergman Jewelry Co., has returned from a trip to the Black Hills territory.

Watchmakers are still in active demand in this territory, where salaries ranging from $20 to $25 a week are offered.

E. A. Dayton & Co. have sold their old show cases and counters and installed some handsome new ones made of oak. The whole store will be finished in oak.

S. W. Lindsay has entirely remodeled his store during the last two weeks. The show windows have been changed and an exceptionally fine exhibit placed in them for the delectation of the public.

S. W. Sturdevant, Pacific Coast traveler for the Shook Mfg. Co., has returned from the Pacific Coast and is visiting his family at Newton, Ia. C. L. Shook left last week for a business trip through Nebraska and in May will visit Colorado.

Columbus, O.

James Caldwell has removed his jewelry store from its former location, on the viaduct, to 79 E. Gay St.

Incorporation papers have been filed with the Secretary of State by the Hampden Watch Co., of Canton, with a capital of $200,000. The incorporators are: John C. Dueber, W. C. Boyle, C. E. Sanders, C. T. Brooks and W. B. Whiting.

During the past two years the local office of the Adams Express Co. has suffered from a series of systematic robberies amounting to about $20,000. Among other things stolen is said to have been a package containing diamonds valued at $2,400, which had been consigned to T. T. Tress and returned by him to the company for shipment to New York. No trace of this package can be found. A package containing 700 rings was also stolen, nine of which have been recovered, in addition to 74 which were found in the house of one of the express company employes. The police are still investigating

A large stock of Diamonds we have on hand,
A selection of which we will send on demand.
And let us assure you that *now* is your chance,
As our rates are the same as before the advance.
The last rise was only on newly mined rough,
And exempted the stock of ELIASSOF.

Eliassof Bros. & Co.

IMPORTERS AND JOBBERS OF
DIAMONDS, WATCHES, JEWELRY,
9-11-13 MAIDEN LANE, NEW YORK.
100 STATE ST., ALBANY N. Y.

A LARGE ASSORTMENT OF DIAMOND MOUNTED JEWELRY CARRIED IN STOCK.

Harrisburg, Pa.

The joint resolution appropriating $25,000 for the purchase of a silver service for the battleship *Pennsylvania,* and designating Governor Pennypacker and United States Senators Quay and Penrose as a commission to purchase the service, was allowed to become a law by default, Governor Pennypacker not caring to sign the measure because of the fact that he is named as one of the commissioners.

C. Ross Boas has purchased the Morning Patriot building, 320 Market St., for $60,000. It is his intention to remain where he is until the lease expires in 1907, unless he finds it advantageous to move. Mr. Boas stated to THE CIRCULAR-WEEKLY correspondent he had been trying to get possession of Market St. property for some time and will make public the changes contemplated for the Patriot building later. The transfer of the property was made April 6. The building bought by Mr. Boas has a Market St. frontage of 26 feet 3 inches and a depth of 210 feet, extending to Strawberry Ave. It is a four-story brick structure. The building in which Mr. Boas is now located was recently sold to a syndicate for $55,000.

Although the bill regulating the use of trading stamps, requiring them to be redeemed at their face value, either in cash or merchandise, at the option of the holder, and in any quantities, has passed both branches of the Legislature, in some inexplicable way the House bill has been lost in the Senate Committee and the Senate bill was lost in the House Committee. After numerous unsuccessful efforts on the part of friends of the measure to get the Senate bill before the House Committee, so that it could be reported, Mr. Myers, of Cumberland, asked the House to grant unanimous consent to have the committee discharged from further consideration of the bill and to have the bill placed on the calendar. Unanimous consent was granted and the bill was placed on the calendar for first reading Monday evening.

The stock of G. A. Howe, Duncan, Ind. T., was damaged by fire to the extent of $1,000 a few days ago. The stock was fully insured. The entire loss to the town of Duncan is said to aggregate $66,400.

Wm. Bertossie has resigned his position as engraver for Ernest Schmalz, St. Paul, Minn., and has accepted a similar position with the St. Paul Jewelry Co., which has considerably enlarged and improved its quarters.

Butte, Mont.

Ed. Mayer's auction sale closed April 4 and he is now busy getting his store into shape for his regular retail business.

Hight & Fairfield, 110 N. Main St., this city, have just introduced a souvenir in the form of a copper paper knife with a large handle on either side of which are bas-relief designs. One is an agricultural and the other a mining scene, while handsomely lettered on the blade are the words, "Butte, Montana." The souvenirs are made from Butte copper and are selling well.

Burglars entered the store of Curran & Eyclesheimers, Missoula, April 3, and stole $75 worth of watches, knives and razors from the show case. The discovery was not made till the next morning, when it was found that the thieves had entered through an open back window. Two men were later arrested charged with the robbery and part of the stolen goods were found in their possession.

Ed. Rose, who has hitherto conducted a second-hand jewelry store at 8 E. Park St., has now branched out into regular jewelry lines. He secured a lease on the premises 21 N. Main St., and last week opened up his new store, in which all the fittings are entirely new. The second-hand department occupies a handsome office in the rear of the salesroom. D. W. Brodie, who managed Harry Blumkin's jewelry store for 10 years, is now associated with Mr. Rose in the same capacity.

Syracuse.

E. G. Burtis, wife and daughter, of Antwerp, were in town last week.

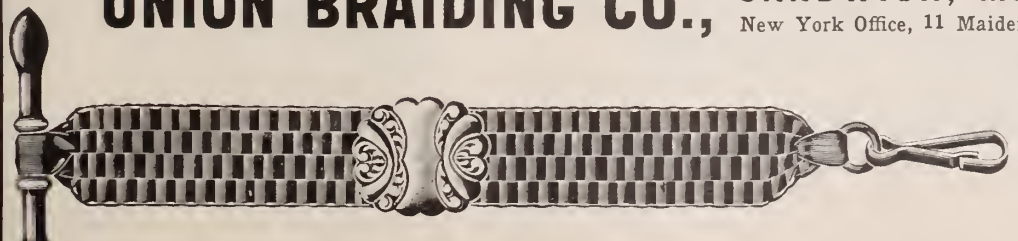
E. G. Seymour, of Joseph Seymour's Sons' Co., has returned from a trip to New York.

Harry L. Benedict, of the M. S. Benedict Mfg. Co., East Syracuse, was in New York last week.

About noon Wednesday two unknown men attempted to gain entrance through a rear window into the jewelry store at 137 N. Salina St. belonging to Harrison & Latterner. The burglars were seen trying to enter the building but became frightened and made good their escape before a capture could be effected. The affair was reported to the police at once and a detective was sent to the place. No capture has been made. No one was in the jewelry store at the time, as the clerks had just gone out to lunch.

"Koholia"

For Alcohol Lamps and External Use.



KOHOLIA is a methylic spirit, cheaper than alcohol and better for burning purposes. It can be relied upon, and we guarantee satisfaction with its use in connection with our lamps.

EVERYONE should stock it for the warm weather. It is used extensively in the summer for Traveling Companions, Chafing Dishes, Alcohol Stoves, etc.

Contracts Awarded for Supplying Naval Observatory with Clocks, Watches and Spyglasses.

WASHINGTON, D. C., April 9.—The Navy Department has awarded the following contracts for furnishing the Naval Observatory with clocks, watches, spyglasses, etc.:

Edwin Harris, Washington, D. C., 45 comparing watches and 35 stop watches, $1,782.50.

Manhattan Supply Co., New York, 135 deck clocks, No. 1, $1,463.40.

Chelsea Clock Co., Boston, Mass., 70 deck clocks, No. 2, $735.

Sussfeld, Lorsch & Co., New York, 220 binocular glasses, day, and 290 binocular glasses, night, $3,406.80.

Queen & Co., Philadelphia, Pa., 45 quartermaster's spyglasses, high power; 80 quartermaster's spyglasses, low power; 15 quartermaster's spyglasses, medium power, $1,891.50.

Robert Leding, Washington, D. C., 225 spyglasses for officer of the deck, $1,800.

R. C. Ballantyne, Washington, D. C., 35 protractors, $1,994.65.

R. W. Geldt, New York, 52 aneroid barometers, $408.80.

Sussfeld, Lorsch & Co., 55 clinometers, new style, Hicks, $929.50.

Increase in Price of Carbon Reported by Consul Furniss.

WASHINGTON, D. C., April 9.—In a report to the State Department, Consul Furniss, at Bahia, Brazil, says there is little to note relative to diamonds and carbons, without repeating the information contained in an extensive report on these articles, which he sent to the State Department in October of last year, and which was published in full in THE CIRCULAR-WEEKLY at the time.

The output, he says, continues the same, although the price of carbons has advanced at the mines from $28.80 to $36 per carat, the higher price being probably due to the increased demand, consequent to the resumption of work in the mining sections of South Africa.

E. C. Bates, Alliance, O., last Wednesday began an auction sale of his entire stock.

Jewelry, Clocks and Optical Goods Exported From New York.

THE following were the exports of jewelry, optical goods, silverware, clocks, watches and kindred lines from the port of New York for the week ended April 8:

In H. S. Dusenberry & Son's show window, Middletown, N. Y., was recently exhibited a handsomely framed photograph of President Roosevelt. The picture was presented by the President to the Rev. C. M. Winchester, who will place it in the Masonic Hall at Oakview.

The pearl fisheries around LaPaz, Mexico, which in the past have been small producers, are now receiving considerable attention. A new and improved method is being employed, by which the spawn can be collected and the shell cultivated in large quantities. It is estimated that this system will bring enormous returns, as the shell becomes full grown and even produces a fair quota of fine pearls when two years old.

THE.... APEX MATCH HOLDER (PATENTED).

Holds a box of safety matches and furnishes convenient receptacle for the burnt ends.

Made in Sterling Silver, 2⅜ inches long. Price, $2.25.

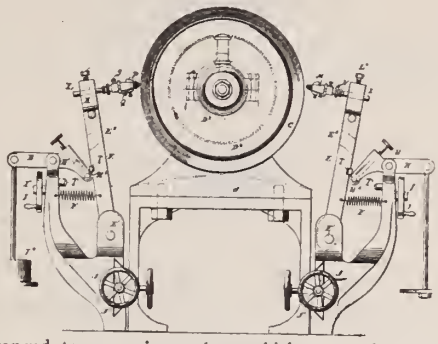
PATENTED MARCH 24, 1903.

The Latest Patents.

ISSUE OF APRIL 7, 1903.

724,460. CLOCK. Eugene Fitch, New York, N. Y. Filed May 12, 1902. Serial No. 106,878. (No model.)



The combination, with a plurality of indicating-plates, of a rotating part on which such plates are pivotally mounted, each of such plates being

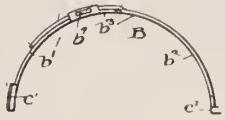
mounted on such rotating part so as to swing freely thereon and the axis of such rotating part being arranged at a slight inclination upward and rearward from the vertical, means for rotating such part, and a stop arranged to successively co-act with such plates and press the advance plate back upon adjacent plates in near so as to develop a resilient force to swing the plate and cause the next plate to be exposed.

724,536. DIAMOND-SPLITTING MACHINE. Asser J. Benjamins, Brooklyn, N. Y. Filed Aug. 8, 1901. Serial No. 71,283. (No model.)

The combination of a work-holder comprising spaced opposing members adapted to hold the article between them and one adjustable relatively to the other to clamp said article, with a cutter ar-

ranged to move in a plane which passes between the members of the holder and which is parallel to the direction in which the clamping movement of the holder takes place.

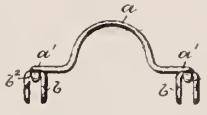
724,591. STUD FOR SHIRT-BOSOMS. James W. Lawson, East Providence, R. I. Filed July 31, 1902. Serial No. 117,866. (No model.)



The improved stud for shirt-bosoms herein described, consisting of an ornamental front or head

and a shank terminating in an elongated integral wire having a quarter-turn, two straight portions parallel with each other and connected by a semi-circular bow, a straight tongue portion extending in a line parallel with said two straight portions but in an opposite direction and midway between them and connected with one of them by a quarter-turn.

724,604. WATCH CASE-SPRING. Charles Nobs, Jr., Newark, N. J. Filed Feb. 14, 1902. Serial No. 94,115. (No model.)



The combination of a lift-spring, a lock-spring, each of a length substantially equal to an arc a quarter of a circle long and having respectively a lift-hook and a catch at opposite ends, means for adjustably securing the adjacent ends of the springs together leaving the outer ends carrying

the lift-hook and catch free, so that the distance between the said adjacent ends may be increased or decreased, and whereby the normal length of the combined springs and means for securing same together is substantially equal to a semi-circle.

724,755. BRIDGE FOR RIMLESS SPECTACLES. Frederick A. Stevens, Providence, R. I., assignor to Albert E. Lenz, Providence, R. I. Filed Aug. 31, 1900. Serial No. 28,664. (No model.)

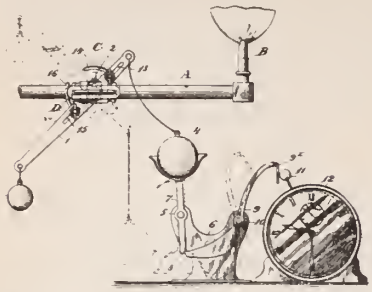
The combination in a nose-bridge with the bridge-

wire a, the flattened ends a^1 and the pins a^2 formed from a single piece of wire, of the lens-clamp formed with the arms b^1, the clamping-pieces b and the rigid central portion b^4 provided with the guide-cavity b^3, as and for the purpose described.

724,888. TIME VALVE MECHANISM. Andrew W. Knox, New York, N. Y. Filed Aug. 12, 1902. Serial No. 119,383. (No model.)

A device for the purpose specified, comprising a cut-off for the fluid, an operating-lever arm connected therewith, a cut-off weight suspended therefrom and adapted when unsupported to cut off the fluid by gravity, a rocking support for said weight adapted to hold the latter in inactive position, the weight being carried on the support substantially over the pivotal point of the latter, means for holding said support against rocking, and means

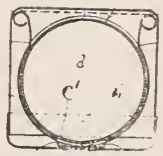
TRADE-MARKS.



TO MANUFACTURERS AND JOBBERS:

WE HAVE now in preparation the second edition of *"Trade-Marks of the Jewelry and Kindred Trades"* and in order that this work may be as complete and accurate as it is possible to make it, we request all manufacturers and jobbers to send us a list of such marks as they may now use, or have ever used, together with such information (the kind and quality of goods upon which the marks are used, etc.) as may be germane to the subject. Send cuts of marks if possible. If not, send clear, printed impressions or drawings.

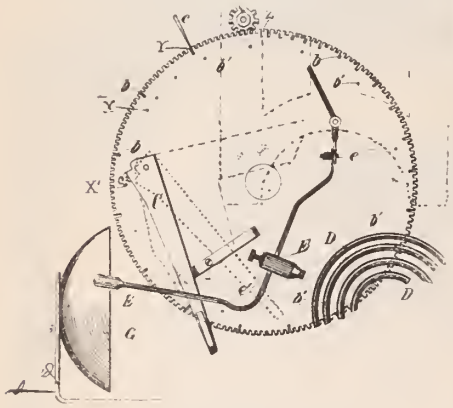
The earliest attention is solicited as it is of the utmost importance to every manufacturer and jobber to have his mark recorded in this volume.



THE JEWELERS' CIRCULAR PUBLISHING CO., 11 JOHN STREET, NEW YORK.

for tripping said support automatically under predetermined conditions.

724,926. HOLDER FOR WATCH-MOVEMENT BOXES, ETC. Charles J. Olney, Jr., Waltham, Mass., assignor to the American Waltham Watch Co., Waltham, Mass. Filed July 29, 1902. Serial No. 117,554. (No model.)



A holder comprising a base-section and a cover-section adapted for detachable connection with each other, and spring-fingers affixed to the bottom of the base-section and projecting therefrom into

the cover-section, said springs being formed to partly encircle and yieldingly grasp the periphery of an article such as a watch-movement-holding box, the springs being normally retracted from contact with opposed walls of the cover-section and arranged to be forced outwardly into contact with said walls by the insertion between the springs, of an article they are formed to grasp.

724,956. CLOCK STRIKING MECHANISM. Alexander C. Schuman, Louisville, Ky., assignor to Robert W. Bingham, Louisville, Ky. Filed Oct. 29, 1902. Serial No. 129,303. (No model.)

In a clock, a striking mechanism having a con-

trolling-wheel provided with two series of strike-teeth, each hour-repeating set of teeth containing an extra tooth whereby the hour will be audibly repeated on the half-hour and an extra stroke made by the hammer after each repeated hour; in combination with devices controlled by said wheel whereby such extra tooth will cause the sounding of the half-hour on a distinctive gong after the repetition of the hour.

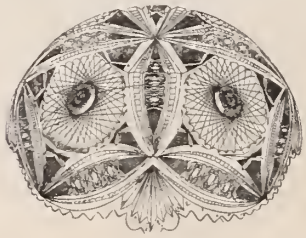
724,983. FOUNTAIN-PEN. Paul E. Wirt, Bloomsburg, Pa. Filed Jan. 12, 1903. Serial No. 138,725. (No model.)

In a fountain-pen, the combination with the holder carrying the pen-point, of a feed bar or

shaft lying within the concavity of the pen with its adjoining lateral and outer terminal surfaces in continuous contact therewith to provide capillary attractive channels along the line of such contact, and constituting means for holding a loop of ink in suspense across the nibs.

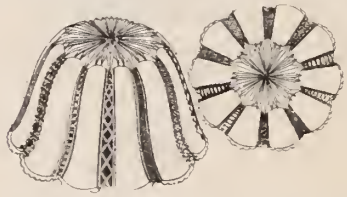
724,984. FOUNTAIN-PEN. Paul E. Wirt. Bloomsburg, Pa. Filed Jan. 12, 1903. Serial No. 138,726. (No model.)

In a fountain-pen, the combination with the holder carrying the pen-point, of a feeder having attractive surfaces at the outer end portion ar-



ranged to separate the stream and hold a loop of ink in suspense across the nibs.

Design **36,274.** RING. John C. Miller, Cincin-



nati, O. Filed March 7, 1903. Serial No. 146,767. Term of patent 7 years.

Design **36,275.** CUT-GLASS VESSEL. William C. Anderson, Chicago, Ill., assignor to the Libbey Glass Co., Toledo, O. Filed Feb. 18,

1903. Serial No. 144,005. Term of patent 7 years.

Design **36,276.** CUT-GLASS VESSEL. William Marrett, Toledo, O., assignor to the Libbey

Glass Co., Toledo, O. Filed Feb. 10, 1903. Serial No. 142,811. Term of patent 7 years.

Design **36,277.** CUT-GLASS VESSEL. William Marrett, Toledo, O., assignor to the Libbey Glass Co., Toledo, O. Filed Feb. 10, 1903. Serial No. 142,812. Term of patent 7 years.

Design **36,278.** CUT-GLASS VESSEL. William Marrett, Toledo, O., assignor to the Libbey Glass Co., Toledo, O. Filed Feb. 10, 1903. Serial No. 142,813. Term of patent 7 years.

Design **36,280.** MOUNTING FOR METAL DISHES. Seth H. Leavenworth, Cincinnati, O., assignor to the Homan Silver Plate

Co., Cincinnati, O. Filed March 2, 1903. Serial No. 145,842. Term of patent 7 years.

Trade-Mark **40,069.** SILVER SPOONS, FORKS, KNIVES AND LADLES. Oneida Community, Ltd., Kenwood, N. Y. Filed Feb. 25, 1903.

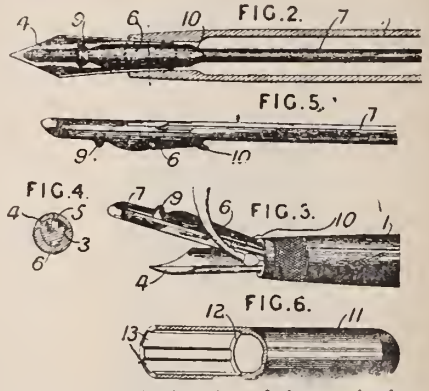
TRIPLE-PLUS

The compound word "Triple-Plus." Used since August, 1902.

ENGLISH PATENTS.

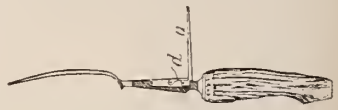
(Abridgements of Specifications, 1901, from *The Illustrated Official Journal.*)

23,988. PENS, RESERVOIR. E. L. Blake, 66 Belgrave Road, and R. H. Platt, 215 Ashton Road, both in Oldham. Nov. 26.



The piston *g*, carried by the partly-tubular rod

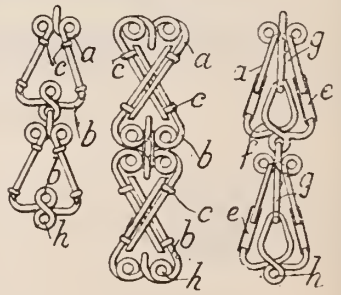
c, is locked in its outermost position by the screw *f* and socket *d*. The rod *c* slides through the nut *a*, cap *h*, and packing *i*, and is attached to the plug *l* carrying the sliding sleeve *k*. The bifurcated feeder *m* passes along the upper and under sides of the nib *o*, and is constructed with a helical or a perforated tubular inner end.



24,061. RESERVOIR PENS. H. J. Hadden, 18 Buckingham St., Strand, London, W. C. (J. W. Laughlin, Detroit, Mich, U. S. A.) Nov. 26.

Fig. 2 shows a longitudinal section, and Fig. 4 a cross-section of the pen. Fig. 3 shows the method of filling, Fig. 5 the feeder, and Fig. 6

the protector. The barrel 1 of the pen is shaped at the top 5 to conform exactly to the upper surface of the nib 4, which rests on shoulders 3. The feeder 7, made of flexible material, is provided with an ink duct in its upper surface, a thumb-piece 9, an enlarged part 6 to fit the oval lower portion of the pen barrel 1, and a catch 10 to engage the edge of the pen barrel when the feeder is drawn outwards for filling purposes. The protector 11 is provided with a ledge 12 to prevent it from being pushed too far over the penholder, and with grooves 13 for the passage of air.

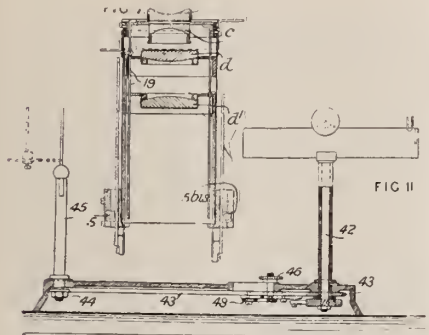


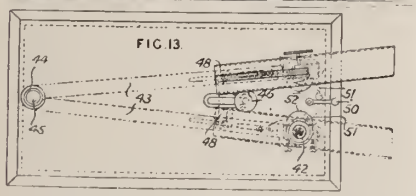
24,543. CARVING-FORKS. W. Buckley, Vachddeiliog Hall, Bala, Merionethshire. Dec. 3.

Consists in providing a pivoted tumbler *d* for retaining the guard *a* in its raised position.

24,561. BRACELETS; CHAINS. J. O. Zieher, 7 Kapuziner Gasse, Gmuend, Wurtemberg. Dec. 3.

Relates to the flexible or self-closing bracelets and other chain-like articles described in Specifications No. 11,245, A. D. 1899, and No. 18,515, A. D. 1900. The wedges are dispensed with. In





the form shown closed in Fig. 10, wedge-like spring members or links *a*, *b*, are provided with eyes *c*, and slide one over the other, and in the modified form shown closed in Fig. 2, the members slide side by side. In the form shown extended in Fig. 7, one member *a* slides in sockets *e* on the corresponding member, and the whole is interlocked by rigid links *f*, *g*. The flexibility may be increased by forming convolutions *h* on the members, and ornamental plates set with precious stones or gems may be added.

24,620. SIGHT-TESTING APPARATUS. E. H. C. Fritz, 7 Passage de la Bourse, Charleroi, Belgium. Dec. 3.

Relates to apparatus for determining in diopters the powers of spherical and cylindrical lenses necessary for the correction of the refraction errors of the eye. For the determination of the powers of the necessary spherical lenses, a pair of spherical testing-lenses are employed, the distance between which can be adjusted to alter the equiva-

lent power of the combination. Errors of astigmatism are similarly estimated with cylindrical lenses, which can, in addition, be rotated on their axes to determine the positions of the astigmatic axes. Fig. 7 shows one form of the arrangement. Lenses *d*, *c* and d^1, c^1 are mounted so that, by means of a rack and pinion 5*bis*, the lens d^1 can be adjusted longitudinally, and by means of a rack and pinion 5 the lens *d* can be similarly moved. The mount of the lens c^1 is connected by the rod 19, which passes loosely through a slot in the mount of the lens *c*, with the lens d^1, so that they

can be rotated simultaneously and independently of the lenses *c*, *d*. The lens *c* is similarly connected to the lens *d*. The rotation of the lenses on their axes may be effected by rack-and-pinion gear. Figs. 11 and 13 show a side view and plan respectively of two testing-telescopes mounted for use. Each telescope is mounted to rotate in a socket carried at the end of a compass arm pivoted at 44. The telescopes are rotated simultaneously in their sockets by means of a button 46 attached to a slotted cross-arm 48, which engages with two sliding pieces 48, which act through springs on the lower ends of the rods 42 carrying the telescopes. The angle between the arms 43 is adjusted by the rotation of a handle 50 carrying a disc 52 connected to the ends of the arms 43 by cranks 51. The test type, etc., to be observed is mounted on a standard 45.

Complete specifications accepted March 18, 1903.

1902.

6,517 and **6,518.** MENU HOLDERS. Van Daalen.

RETAIL MERCHANDI

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan which they are utilizing in connection with their business.

PRIZE ESSAY COMPETITION, NO. 10.

SUBJECT:

"How to Develop a Watch and Watch-Repairing Department."

TO develop is to progress by stages; to develop a watch and watch repairing trade is to constantly improve and enlarge business in those directions; therefore the watch sold or the repair job given out to-day must be so satisfactory that it will tend to bring more business later. A single cause for dissatisfaction, though unseen by the customer at the time, will surely hinder development eventually. Probably no calling demonstrates more fully the truth of the ancient adage, "Honesty is the best policy," for he who sells or repairs a watch puts into his customer's pocket a constant reminder of honesty and ability or the reverse. Honesty is a watchmaker's cornerstone of development.

But honesty of purpose and ability are not all-sufficient for success. The dealer must let people know that he possesses those qualities and win their confidence. He must be popular, affable, energetic, keep watches that run on time, and run on time himself. He must know his business and be able to express his knowledge in language. The man who knows that the watch he is trying to sell is good, but cannot explain lucidly to the man who does not know why it is good, is handicapped. People will pay $5 for repairs to a watch more cheerfully to the man who can make them understand that the job is worth the price than half the amount to one who could only say, "That's my price."

In these days when a country boy from Wayback will walk into a jeweler's store and quote from a well-digested pamphlet names, numbers, jewels, adjustments, patents, sizes, prices, discounts, weights of cases, qualities and all the items that were aforetime the secret lore of the watchmaker, it behooves that gentleman to be not only thoroughly posted on all the details of trade information, but also to have a complete understanding of the exact value of the points emphasized in advertised claims of superiority. And he must not only know the facts and their bearing on his business of selling watches at a profit, but be able also to set right the mistaken notions of partial knowledge and to do so without exciting suspicion of interested motives or offending the "man who knows."

Although the general knowledge of the public now makes it difficult to palm off poor watches at high prices, many opportunities are left the dealer to prove his faith in the fundamental principle that it pays to be honest. People often invite deception by their unwillingness to pay a profit. Lying advertisements have taught them to expect impossibilities for their money. They do not know the cost to the jeweler or the value to themselves of his guarantee, and they want to buy of him at irresponsible bargain-counter rates. For such reasons some dealers feel justified in getting even by taking advantage whenever the customer's ignorance gives an opportunity. It is a poor policy. The square basis of a good understanding of the merits of the case is safer.

If a dealer allows a poor timepiece to go into a customer's pocket without informing him that while there is value for the money paid and it may serve the purpose for which it is bought, it must not be expected to keep accurate time, he injures his chances for building up a watch trade in that direction. When the watch proves worthless as a timekeeper, the only thing that buyer will remember and talk about is that it is "no good," and Jones, the jeweler, sold it to him for a good watch.

The safest way to develop a watch trade is to sell no poor ones; there are plenty of good cheap watches in the market. As a rule an honest, intelligent statement of the comparative merits of watches will induce a man if he wants a reliable watch to pay enough to get one. The dealer in selling should not claim more for the watch than can be reasonably expected of it, and it is a wise plan to give a bill with it stating the facts of quality to which the buyer may be referred in case of a question later on.

A jeweler should know and get the best movements and cases of the various grades needed for his stock. The hit or miss plan of buying anything that looks as if it might sell will not build up a watch trade. The success of the American watch has been that, high grade or low grade, it is always a good watch. Every watch sold should bring more sales. No paid advertising equals the free advertising which a man who is satisfied with his watch gives the dealer who sold it.

Although a dealer should not put in stock watches which he knows will not give satisfaction, his personal preferences may be modified by his trade. There are localities where certain makes have the preference. "Waltham" has the confidence of the people in one section, "Elgin" in another, some other name in yet another. It is not wise to fight a customer's prejudice for one good make to sell another. To sell the people what they want if it is good, make no unwarranted statements, nor give any guarantee which cannot be made absolutely good is a safe policy. A watch which proves fully up to all the jeweler claimed for it drums for new trade with every tick. If it falls short, the damage will be at a greater ratio, because people find fault more easily than they praise.

X. Y. Z.

(To be continued.)

Prize Essay Competition—No. 11.

Three prizes, $20, $10 and $5, will be given to writers of essays on the subject:

"How a Jeweler Can Profitably Conduct a Camera Department."

The prizes will be awarded to the writers of the best and most reasonable essays. The ideas expressed, rather than the language used, will be considered in making the awards. The essays will be lettered when received and the judges will not know the identity of the writers until after the decisions have been made.

Essays must be in the office of THE CIRCULAR-WEEKLY by April 15. Write plainly and legibly and on one side of the paper only.

The right is reserved to publish any or all of the essays received. Only those connected with the trade are allowed to enter this competition.

NG and HINTS to JEWELERS

Art in Store Decorating.

ONE of the handsomest jewelry establishments west of Chicago is the newly remodeled store of Edmund W. Blossom, Sterling, Ill. A new steel ceiling, containing two drop panels of three inches each, with a lower base three inches wide, was recently installed. On these drop panels 26 incandescent bulbs are suspended. The panels encircle the two halves of the store, one being on the south side of the center and the other on the north side.

The ceiling is painted robin's-egg blue, and trimmed in other shades of blue, highlighted with silver. The side walls are decorated with a handsome sky blue, harmonizing most beautifully with the ceiling. The interior is illuminated with 56 electric bulbs, half of them being arranged in a chandelier, and the other half suspended from the ceiling as described above. There is also a number of glass globes of variegated colors.

This store, which is situated at the corner of 3d and Locust Sts., is 40 feet square. On the 3d St. side there are three large plate glass show windows. One contains the watchmaker's bench, the other hand decorated china and art goods, and the third watches and miscellaneous jewelry. On the Locust St. side there are four windows, eight and a half feet in length. One is filled with silver and silver plated ware, the second with art pottery, vases, plaques, etc., the third with an artistic collection of clocks, while the fourth contains the engraver's bench.

TWO VIEWS OF THE NEWLY REMODELED STORE OF E. W. BLOSSOM, STERLING, ILL.

For the display of the stock in the store there are six 10-foot counter cases and four 10-foot wall cases, all made of solid oak. Beautiful mirror-topped tables enhance the beauty of the cut glass display. An optical department, equipped with all the modern optical appliances, completes the attractiveness of the establishment, which is a model of artistic store decorating. The illustration above gives a view of one side of the store, while the lower one shows an end view with the spacious wall cases which contain a display of silverware, clocks, etc.

COMMERCIAL LAW POINTS.

An account rendered and not objected to within a reasonable time must be regarded as *prima facie* correct. Five months after settlement is an unreasonable time for one of the parties to object. (36 Ct. Cl. Rep. 138.)

Where by the terms of a contract for the sale of personal property the seller is to deliver them at a certain place, paying the freight on same, such place becomes the place of sale, and the title does not pass until delivery has been made there. (112 Fed. Rep. 258.)

The burden of proof is upon him who seeks to avail himself of the acts of an agent, in order to charge the principal, to prove the authority under which the agent acted, to establish the agency, and the extent of the same. (13 Pa. Supr. Ct. Rep. 143).

Retail Jewelers' Advertising.

[The use of this department is open to every retail jeweler and optician. Forward for criticism your newspaper ads., booklets, catalogues, novelties, circulars, etc. Ask advice and offer suggestions. Replies in these columns are unbiased. Make letters as full and particular as you desire. Every letter and ad. sent will receive full attention, though the publication of the matter may sometimes be delayed several weeks. Address all letters and other matters to THE JEWELERS' CIRCULAR PUB. CO., 11 John St., cor. Broadway, New York.]

THE accompanying advertisements were recently submitted by Keith & McChesney, Iowa City, Ia.; H. A. Woellhoff, Burlington, Ia.; W. A. Sturgeon & Co., Detroit, Mich.; J. F. Bruns & Bro., Greenville, S. C.; V. E. Jacobs & Co., Jacksonville, Fla., and J. P. Mullally, Indianapolis, Ind. Easter advertising, by the way, has not been as conspicuous as it might have been.

Keith & McChesney used the ad. reproduced below in a space 5¾ by 2½ inches.

WE HAVE
THE GOODS....

and can furnish you anything you want in the line of Diamonds, Watches Clocks and Fine Jewelry. Tableware in the finest cut glass and china, Silver in the Sterling and best of plate only.

Keith & McChesney
THE RELIABLE JEWELERS

originally occupied a space of 4½ by 2¼ inches and proved very effectual.

V. E. Jacobs & Co. have rather a unique way of calling attention to their diamond department. There is certainly a diversity of type used in the make-up—perhaps a little too much. Too great a variety of type by no means enhances an ad.'s effectiveness. It might be advisable, also to select another catch-phrase. That fine diamonds are within the reach of all is a statement which would

H. A. WOEHLHAF'S
Jewelry Store

IS THE PLACE TO GET SUGGESTIONS FOR WEDDING OR BIRTHDAY PRESENTS, AND THE PRICE IS SO VARIED THAT EVERY KIND OF TASTE, AND EVERY KIND OF POCKETBOOK IS SURE TO BE SUITED.

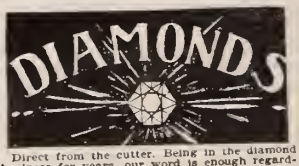
Open Evenings
NO TROUBLE TO SHOW GOODS



V. E. JACOBS & CO.,
POPULAR JEWELERS,
311 WEST BAY STREET.

THE WAY RINGS ARE MADE

has a great deal to do with their real value. You can not detect a trace of sodder on the Rings we sell. You note that the settings are fashionable. An expert would tell you that these delicate settings are as solid as a rock. The little points add to the value of our Jewelry, but we do not tack them to the cost.

J. F. BRUNS & BRO.,

Direct from the cutter. Being in the diamond business for years, our word is enough regarding quality, but if desired, we cheerfully give a written guarantee.
J. P. MULLALLY, Jeweler, 28 Monument Place.

The catch phrase is good and the text is a fair example of the style which makes a general bid for trade, without specializing or quoting prices.

H. A. Woellhoff's ad., which originally occupied a space of 3¾ by 2¼ inches in a local newspaper, is somewhat similar to the previous ad., in that it merely serves to call the prospective buyer's attention to the line of goods carried. The idea intended in the border is commendable, but poorly executed. A glance at the watch in the upper left-hand corner shows it to be very much awry.

The merit of W. A. Sturgeon & Co.'s ad. lies principally in its argumentative power, which could hardly be improved upon. The argument used by J. F. Bruns & Co. is also meritorious, and the cut is well chosen and adapted to the reading matter. This ad. hardly be conceded by many, and indeed it is a good thing for the jeweler that they are not "within the reach of all," either literally or figuratively. The majestic pose of the diamond bedecked gobbler in the illustration cannot fail to attract the eye, but it is improbable that one would be impressed with the value of diamonds by it. This cut would be more consistently used with the advertising of imitation diamonds.

The ad. of J. P. Mullally, which occupied a space of only 1½ by 2¼ inches, gets its strength from the black-and-white effect in the illustration. This ad. would be considerably improved by a little more text, prominently displayed. As it stands now, it appears rather top-heavy, the electrotype being too large in proportion to the text beneath it.

WHAT SOME JEWELERS SAY.

SIMPLY carried away with our Easter goods. Just now our store is in Easter attire and the giant Easter egg, filled with a choice collection of fine gold watches, graces our large show window. We have everything desired for gifts that could be found in a first-class jewelry store, including diamonds, watches, cut glass, jewelry, etc. Call and see our offerings and do not overlook our ring department. We also do fine watch repairing work and test eyes free.—M. Berman, Altoona, Pa.

The time to investigate our splendid line of jewelry novelties is now. If you are not a regular patron of the store drop in—no trouble to show you our goods. Our line includes everything in clocks, watches, chains, charms, bracelets, scarfpins, society emblems, etc. In this line is included our stock of beautiful rings. For a present nothing is more appropriate or better appreciated than a dainty ring from our stock. Our line of engagement rings is most complete.—J. S. Jones, Punxsutawney, Pa.

Every young lady will want a locket and chain when she sees the beautiful designs and the handsome monograms we put on every locket we sell. Whether it be a solid gold one at $25 or a plated one at $1.25, you can get the same high-class engraving, free of charge.—Curtis J. Duncan, Massillon, O.

Have you seen our $1.50 watches? Just the watches for any one who wants a knock-about timepiece. They will stand the jars and rough usage. Every one guaranteed.—San Luis Jewelry Co., Obispo, Cal.

Crown Alleged to Have Belonged to Saitapharnes Withdrawn from the Louvre.

THE dispatches last week from Paris to the effect that the famous tiara or crown which was claimed to have belonged to King Saitapharnes of Olbiopolis or Olbia had been withdrawn from the Louvre and will remain in the reserves of that institution until after the formal decision as to its genuineness has been rendered, serves to recall the comment upon this article seven years ago.

In August, 1896, this journal published an illustration of the tiara, together with an article casting doubts upon the genuineness of the piece, and a year ago THE CIRCULAR-WEEKLY again called attention to points which would indicate that the tiara was a Russian imitation or reproduction, and was not genuine. In the same article was published a statement by George F. Kunz, of Tiffany & Co., who examined the crown, and who agrees with other authorities that there are good reasons to doubt its genuineness. Mr. Kunz, as then pointed out, claims that the piece was undoubtedly the work of two men, the upper portion by one and the lower by another, and that neither workman was a Greek, either ancient or modern.

ALLEGED CROWN OF SAITAPHARNES OF OLBIOPOLIS.

This crown, which was claimed to have been found in a Crimean tomb, is ovoidal in shape, 22 centimeters high and 18 centimeters in diameter at the base. It shows gold repoussé work and chasing and is divided into seven zones, the most important of which contains a border of bas relief figures illustrating a scene from the Iliad. It bears the inscription: "The Senate and people of Olbiopolis to the great unconquered King Saitapharnes." It was sold to the Louvre for 2,000 francs and is said to have been purchased from a man who had previously offered it to the British Museum.

The final announcement of the decision of the Louvre authorities, issued by Agence Havas, is said to be as follows:

"Further information received having caused M. Heron de Villefosse to have grave doubts of the authenticity of the tiara of Olbia, the curator of the Greek and Roman antiquities asked the Minister of Public Instruction and the Fine Arts for permission to withdraw it until something more definite is ascertained regarding it. Permission was granted immediately, and the tiara has been placed in the reserves of the Louvre, where it will remain until the Conseil des Musées, after inquiry, has given a decision."

H. F. Palmer, Lynn, Mass., has sold out to F. Millett and A. Stern. Mr. Millett is a graduate of the Waltham Horological School.

If a customer should bring you any Diamond Jewelry to sell and you do not care to buy it yourself, take it to

were awarded to

PATEK, PHILIPPE & CO.

In the timing contest of the Astronomical Observatory in Geneva, for the year 1901, comprising the First Series Prize, all the three First Prizes, the only Second Prize, four Third Prizes out of six, three Fourth Prizes out of six, four Honorable Mentions out of eight, and twelve Single Mentions out of nineteen.

68 NASSAU ST., NEW YORK. **GENEVA, SWITZERLAND.**

The Term Skiascopy.

IN the end the supreme authority in determining the meaning of a word, or the proper word to express a certain idea, is usage, says an exchange. The usage may be local, establishing a dialect, national, fixing the word of one language, or world wide. But within its sphere, popular usage finally becomes supreme. In general that will be regarded as the better word which has the wider use to support it.

In view of these facts, it seems worth while to call attention to the use of the term "skiascopy." It is not so old a word as retinoscopy; but neither is retinoscopy so old as keratoscopy, and keratoscopy had the advantage of being the suggestion of the originator of the test. Keratoscopy was given up because it was inappropriate and misleading. The *Index Medicus* placed it under the heading, diseases of the cornea, a very reasonable position for the word, although an entirely inappropriate classification for the thing signified. The procedure in question is not a method of examining the cornea. Neither is it a method of examining the retina, except that as an accident the refraction of the retina approximates the refraction of the surface from which the light reflex is obtained.

It was because of this inappropriateness of retinoscopy, and the tendency even then observable in the literature of the subject toward the general use of the more reasonable term, that the writer, some years ago, gave up its use, and began to employ skiascopy in its place. A recent examination of the literature of the subject shows that these reasons have had equal weight with most others who have written on the subject.

Outside of those who write in English and, indeed, outside of a small group of American writers, the term skiascopy has come to be almost universally employed. In examining the French and German literature of the last two years, with references also to Italian and Spanish, it is found that the term skiascopy has been used by 17 writers, while the term retinoscopy occurs but three times, and then only in quoted titles of American articles.

This is quite a striking fact in regard to the French literature, since both retinoscopy and skiascopy were proposed by French writers. But it is still more striking that in Hirschberg's 450 page catalogue of his library, issued last year, the term retinoscopy does not occur. Of the 22 monographs and reprints there catalogued, 18 employ the term skiascopy or skiascopie, and four use shadow-test, "shattenprobe," or an equivalent.

In spite of these facts those who speak and write will probably continue to use such language or dialect as they please. But to any one who does some reading outside of his mother tongue, it seems a matter for regret that local or national ignorance, or self-sufficiency, or the mere desire to be peculiar, puts obstacles in the way of a universal language of science.

Answers to Optical Queries.

SUMTER, S. C., March 19, 1903.

Editor of THE JEWELERS' CIRCULAR-WEEKLY:

(1) Kindly give me a receipt for baking and cementing bifocal scales on lenses. By my method the scales remain all right for six or eight months and then separate a little.

(2) Can you give me the address of the firm which handles a family medical book entitled "Medicology," written "by 20 specialists?"

(3) I have a patient 29 years old who has worn glasses for 10 years with fairly good results, but who suffers with asthenopia or pain in the eyes and is sensitive to light, O. U. V. $= \frac{20}{20}$ W. + 1.75 D. S. $= \frac{20}{20}$. For the last 12 months he has been wearing O. U. + 1.25 Sph. with fair success, until about 15 days ago, when I put a + 1.75 Sph. on both eyes. He states he can see all right until four or five o'clock in the afternoon. Then his eyes become blurred, but don't draw in any way. At this juncture I put on + 1.50 Sph. and they clear up the distant vision. The near vision is good at all times, but the patient experiences much eye strain and discomfort while reading with glasses or without glasses. P. P. = 6″ Nv. 5″ without glasses. P. r. = 30 to 33″ N. V. 28″, with O. U. + 1.75 Sph. W. P. = 13″. The patient, who is a bookkeeper, suffers from indigestion and low vitality or debility. He does not drink intoxicants or chew tobacco, in fact uses no stimulants whatsoever. His habits are good. His eyes are somewhat red and always appear congested. He has no heterophoria. Now, what causes the undue redness of the eyes and what remains to be done? Would you advise the use of + 1.50 or + 1.75 Sph.? He has no manifest astigmatism. Yours truly, Z. F. H.

ANSWER:—(1) The proper way to prepare cement for bifocals is as follows: Get the best Canada balsam which the market affords, remembering that in this, as in all other matters, the best is the cheapest. Heat the upper segment and then apply the lower segment with care and let stand until both segments are cold. A good plan would be when you have plenty of time to let the segment remain undisturbed for 24 hours. By following the above plan you will get results satisfactory to yourself and patrons.

(2) E. R. Pelton, 19 E. 16th St., New York, will probably be able to furnish you with the book you desire.

(3) In answer to your third query your patient is evidently suffering from overwork, rather than from under of over correction of his lenses, so that if the diopter and three-quarters relieves his ametropia he should wear them constantly, and if he does not receive any benefit thereby you should send him to his family physician. There are a great many subjective complaints similar to the above, and very little attention is paid to them, excepting perhaps to take the lenses away for 24 or 48 hours and then give them back again, with the remarkable result that entire satisfaction is gained, which is what you desire to attain.

Eye Strain from the Medical Practitioner's Standpoint.

(A paper read by A. W. JONES, M.D., Red Wing, Minn., before a recent meeting of the Southern Minnesota Optical Association.)

IT is not the purpose of this paper to offer you a dissertation covering the entire field of that intricate subject, "Eye Strain," or even to touch upon the technical details of practice by which the refractionist attempts to correct the abnormal visual results consequent upon ametropia, but, rather, to call your attention to a phase of the subject which, from the standpoint of the medical practitioner, seems to be too often overlooked by the refractionist, and to have received as yet too little attention from the profession as a whole. I refer to the etiology of "eye strain" in contradistinction to those pathological conditions of the visual mechanism which to the average refractionist seem to stand in the relationship of primal, final and sufficient causes of all asthenopic troubles.

Our knowledge of optics and our knowledge of the anatomy and physiology of the eye may be said to be practically complete. Our knowledge of the pathology of the more common abnormal conditions of the eye, at least insofar as the grosser changes are concerned, is fairly satisfactory. But our knowledge of the etiology of these diseased conditions is still in its infancy, and though a difficult field to investigate it is a most important one, and one that will repay any advancement made.

In reading the literature of "eye strain" one soon discovers that the term is not used in the same sense by different writers, and, if standard technical works are examined, we find that the definitions given vary considerably as to their import. This difference seems to be due to the difference of viewpoint from which the term was defined, some basing their definition on the supposed constant pathological conditions present; some on their idea of the causes acting to produce the trouble, while still others satisfy themselves in describing the symptomatology.

Probably no perfect definition has been or can at the present time be produced, and, in view of the nebulous condition of our knowledge regarding the ultimate causes of this trouble it might be well to limit our-

Optical Department.

selves to a tentative definition, but one somewhat more comprehensive than those usually given. "Eye strain" might thus be defined as the resultant irritation arising from simply an excess of effort or from an abnormalism of effort in the act of visualization, this abnormalism being either the result of permanent organic pathologic conditions of the ocular mechanism, or of temporary functional disturbances secondary to general bodily conditions, or of a purely reflex phenomena, the excitation originating in some distant part of the body. At times this abnormalism is due to a combination of these factors.

The more we investigate the subject of "eye strain," the more we become convinced that the highest attainments in the art of practice cannot be realized by limiting ourselves to a consideration of the eye as a special organ distinct and separate from the rest of the organism. This has been too much the tendency in the past, but a reaction is inevitable. The habit of looking upon refractive and accommodative variations of the eye due to organic defect as the sole cause of "eye strain" is the source of no small percentage of failures to afford relief by the prescription of lenses. Not infrequently does the general practitioner meet with cases whose histories run somewhat as follows: The patient was told that his trouble was "eye strain," caused by a defective condition of the eye and known as hyperopic astigmatism. The refractionist—after a careful examination—prescribed a correcting lens. Patient declared that his vision was much improved by the glasses, and that his headaches were less. In the course of a few weeks he discovered that his "eye strain" was still with him, or if previously absent, had returned, and if anything his vision was getting worse.

His refractionist told him that he had the proper remedy in his glasses if he would only wear them continuously and give his eyes a little more rest, and, above all, have a little more patience. Patient finally becomes dissatisfied and goes to refractionist No. 2, who, after a careful examination, prescribes a much stronger correction, or weaker, as the case may seem to require, and points out to his patient with evident pride a vast pile of lenses which he has removed from eyes that his competitor has fitted, and rarely fails to express his opinion of his competitor's stupidity and general incapacity. Incidentally, I might remark that his competitor has a similar pile of removed lenses, which he points to with equal pride.

This second pair of lenses seems to satisfy no better than the first, and, finally, perhaps by chance, the patient discovers a pair of lenses in the supply of some spectacle vender which he prefers to either. In time his family physician hears the story of his efforts to find relief, and how he found it in the wonderful glasses he now wears. Upon examination they prove to be possibly the weakest form of plus lenses manufactured. The general practitioner will recognize in this history an approximate analogy to many to which he has listened.

Now a pertinent question is, Where, in such a case, lies the blame for the blunders? I might answer that the blame might be located in either of three places: (1) With the patient, for possessing a pair of eyes that were inconstant as to their visual acuity; (2) with the lenses, for not accommodating themselves to the varying conditions of those eyes, and thus making themselves generally handy; (3) with the refractionist, for not discovering that element of inconstancy, or knowing the phenomena of hyperasthesia which may result from congestion, or the loss of muscle tone and nerve excitability dependent upon anæmia, or of the numerous possible reflex phenomena arising from disturbances in distant organs, as in cases of dyspepsia, or the disordered conditions of the various organs within the pelvis, or of the multitude of other bodily conditions which have been clinically shown to directly or reflexly disturb the normal function of vision.

The medical practitioner long ago learned that lesson which teaches how headaches, pain in the back, pain in the heart, pain in the stomach, and such diseases as dyspepsia, heart trouble, migraine, chorea, epilepsy, melancholia, pelvic troubles, and even insanity, may be the result of reflex disturbances caused by uncorrected organic eye defects; but the refractionist usually looks upon this as a victory for his department and rests upon his laurels. It may be as correctly stated, however, that any of the possible results of "eye strain" may stand, conversely, as the cause of "eye strain;" and this is a lesson we have still to learn, though clinical experience seems to have shown it.

The presence of sympathetic nerve fibers in nearly every nerve bundle supplying the ocular mechanism, and their intimate anatomical connection with the cervical sympathetic ganglion would certainly make the physiologist suspicious, for he knows that sympathetic nerve fibers are notoriously the highways of reflex traffic, and that the ganglions are both transfer stations and power houses for generating impulses. Reflex action, therefore, finds in these centers an important mechanism necessary for its production, and, as a general rule, reflex phenomena are most active within the range of structures acting associatively and such a range certainly exists between the structures involved in the act of visualization, as exemplified in the act of accommodation, which includes contraction of the ciliary muscle, convergence of the optical axis, and the narrowing of the pupil.

We are all familiar with this association of pupillary contraction as an accompaniment of ciliary contraction: but it took a Ljubinsky to demonstrate that intense movements of the iris as the result of variations of brightness of the electric light were accompanied by disturbing associated movements of the ciliary muscle. All coordinative movements, in fact, are but reflex impulses acting through central associating centers.

I would also call your attention to the fact that the iris, which is anatomically connected with the circular muscle fibers of the ciliary muscle, receives a part of its motor nerve supply from the sympathetic nervous system, as does also the external rectus, the smooth muscle fibers of the orbit, and the muscular fibers of the capsule of Tenon—facts which may offer an abundant field for study.

As an example of how reflex action may give rise to "eye strain" I might cite that stimulation of the cervical sympathetic is known to cause disturbance of vision for near objects and, as to how this may be brought about, I might make at least one suggestion. An absolutely established fact is that stimulation of the cervical sympathetic causes a dilatation of the pupil, which cannot be overcome by the opposing impulses of the oculo-motor nerve.

From what we know of the optical effect of the structure and form of the crystalline lens and the physiological function of the iris we can clearly understand the presence of diffusion rings about the image of the retina, the result of spherical aberration of the lens, and we can thus comprehend the possibility of existing "eye strain" as a result of the overaction of the ciliary muscle in its more or less futile attempts to overcome this aberration—all the result of a dilated pupil, caused by an irritation of the cervical sympathetic, which in turn might be caused by the presence of enlarged lymphatics, an abscess of the neck, the pressure of an enlarged blood vessel, the extension of an inflammation from a diseased pleura or apical tubercular trouble, or by extension of functional disturbances from lower centers of the sympathetic system.

I have not the space in this cursory paper, even had I the ability, to show you the whole field of the possible reflex origin of "eye strain," but must content myself with the hope that I have called your attention to enough to arouse your watchfulness and to show you the necessity of greater care in the treatment of a large percentage of cases of "eye strain." Of course, I do not refer to those typical cases of organic ametropia which can be completely relieved by lenses, but to that other class, part of whose troubles fall naturally to the care of the medical practitioner, but whose eye troubles, owing to the action of mixed causes, are the bane of the refractionist and will remain so until he discovers that help can come only from the conjoint action of glasses and proper medical treatment. When our knowledge of the etiology of the disease of the eye is complete refraction will have become an exact science, but until that time the highest art in practice will be attained by the conjoint action of the refractionist and the medical practitioner, and will be accomplished only when the refractionist has as well learned which cases should be referred to the physician, as the physician has learned which cases must be referred to the refractionist for relief.

Free Treatment of the Eyes in Russia.

UNITED STATES Commercial Agent R. T. Greener recently wrote from Vladivostock to the State Department at Washington as follows:

A Russian charitable association is sending out traveling parties of oculists to render free assistance to persons of small means. During the three months of one party's stay at Habarofsk and Vladivostock, 504 persons received free treatment and 164 operations on eyes were performed.

For Optical Notes and Briefs See Page 64.

Optical Department.

The Physical Aspects of a Theory of Color Vision.

(By F. W. Edridge-Green, M.D., F.R.C.S., in the *Ophthalmic Record.*)

THE view which I wish to bring forward is that each optic nerve fiber is able to convey impulses corresponding to all kinds of light; that is to say, a very similar condition exists in the impulses which are transmitted along the optic nerve to that which is accepted for waves of light previous to their entering the eye. The limitation of the number of color sensations was thought to be necessary because it seemed physically impossible that a single fiber of the optic nerve could convey all waves of light.

The facts of color vision can only be satisfactorily explained on the assumption that each optic nerve fiber does convey impulses corresponding to all waves of light. It occurred to me that if there was a transforming apparatus in the eye we could explain the facts. The telephone shows how this may be accomplished in the case of sound. I saw that the retina was constructed in a manner theoretically perfect from this point of view. The percipient layer of the retina is made up of two kinds of elements, the rods and the cones. The portion of the retina corresponding to the central portion of the field of vision contains only cones. External to this spot the cones are arranged with one or more rings of rods round them, the single ring being round those cones which are nearest to the central portion.

In the rods there is a rose-colored substance, the visual purple, which is very sensitive to light. This photo-chemical substance is found exclusively in the rods. I assumed that light falling upon the eye liberated the visual purple from the rods, just as heat would an ointment, and a photograph is formed. The decomposition of the visual purple by light chemically stimulates the ends of the cones, and a visual impulse is set up which is conveyed through the optic nerve fibers to the brain. I have examined the retinas of several monkeys after they had been kept in a dark room, and found that the visual purple was to be seen in the yellow spot, but situated between, and not in, the cones.

This view gives a reason for a great many facts which were previously inexplicable. For instance, a bright light may fall upon the fovea (the center of the yellow spot) without producing any sensation, and a perceptible interval elapses before we are able to see with the yellow spot, after the remainder of the retina, the fovea being the last point to convey a sensation of light. The first fact we should expect, the cones being insensitive to light; the second corresponds to the diffusion into the yellow spot of the visual purple. All the facts of color-mixing, contrast and after-images can be explained by the hypothesis that the visual purple is the visual substance. A positive rose colored after-image can be obtained after white light or any spectral color. The ordinary explanation of this, namely, that the action of the hypothetical red and violet fibers persists longer than those for green, cannot be true, because it is exceedingly difficult to obtain this after-image after spectral red, and very easy to see it after green. It would be against the whole principle of the theory that the red fibers should be excited most efficiently by green. But if we assume that the visual purple is the visual substance, then we have an easy explanation of the facts.

The fibers of the optic nerve pass to the visual center. I have assumed that the visual center transmits to the mind impressions of white light, and that by it objects are seen monochromatically, as in a photograph. The visual center is, therefore, acted upon by impulses caused by all rays of light, the color-perceiving center being concerned with the quality of the impulse within the power of perceiving differences possessed by that center, or portions of that center.

I will now apply this theory to color-blindness, and it will be seen that it gives a simple explanation of the facts.

Cases of color-blindness may be divided into two classes, which are quite separate and distinct from each other, though both may be present in the same person. In the first class there is light as well as color loss. In the second class the perception of light is the same as the normal sighted, but there is a defect in the perception of color. In the first class certain rays are either not perceived at all or very imperfectly. Both these classes are represented by analogous conditions in the perception of sounds.

The first class of the color-blind is represented by those who are unable to hear very high or very low notes. The second class of the color-blind is represented by those who possess what is commonly called a defective musical ear. Color-blind individuals belonging to this class can be arranged in a series. At one end of this series are the normal sighted, and at the other the totally color-blind. The colors appear at the points of greatest difference, and I have classified the color-blind in accordance with the number of colors which they see in the spectrum. If the normal sighted be designated hexachromic, those who see five colors may be called pentachromic; those who see four, tetrachromic; those who see three, trichromic; those who see two, dichromic; and the totally color-blind, monochromic. There are many degrees included in the dichromic class. There may or may not be a neutral band, and this is widest in those cases approaching most nearly to total color-blindness.

I have recorded a case of a patient who was color-blind with one eye. It is an interesting fact that for form vision the color-blind eye was much the better of the two, and he could recognize fine lines in the spectrum with this eye which were not visible to the other. He saw the two ends of the spectrum tinged with color and the remainder gray. It will be noticed that his color sensations were limited to the extreme red and the extreme violet, namely, those colors which present the greatest physical contrast to each other. Neither the red nor the violet appeared of the nature of a primary color, but gave the impression that they were largely diluted with gray.

A theory of color vision must account for a case of this kind and also for the other varieties and degrees of color-blindness. The trichromic are a very important class, and any theory must account for the fact that they see yellow as red-green and blue as violet-green. As we should theoretically expect, when there is shortening of the spectrum the centers of the colors are moved toward the unshortened side.

In past ages all saw the rainbow made up of only three colors—red, green and violet. When a new color appeared between the red and green (yellow) it is obvious that a mixture of red and green would give rise, not to red-green, but to the color which had replaced it, namely, yellow.

12 SIZE SPLITS.

The "Longeval" Mainspring

... FOR AMERICAN WATCHES ...

With every order of one gross of "Longeval" mainsprings, a handsome oak cabinet, as shown above, made expressly for this brand of mainsprings, is furnished gratis.

The cabinets are made of solid quartered oak, piano finish, destined to hold twelve boxes, each containing one dozen "Longeval" Mainsprings. The cabinets are constructed on the principle of the sectional bookcase—that is, you can build them to any required size, as each cabinet fits securely on top of the preceding one; consequently with your second order for one gross of springs you receive a new cabinet, and have the old one, with twelve drawers each containing twelve boxes, for use as a material cabinet or for other use.

This alone should induce you to order the "Longeval" Mainspring in preference to any other make, but, when you get a spring that is not equalled by any on the market, and so packed that it is protected from rust and climatic changes, and also so packed that only one spring need be handled at a time, instead of a full dozen as with other makes, then you should decide that the "Longeval" is the only mainspring for you to use. Every spring is guaranteed; you are protected from loss in every way—and you get

The Best—The "Longeval."

ORDER A SAMPLE DOZEN FROM YOUR JOBBER AND BE CONVINCED

If you cannot obtain them from your Jobber, write direct to the importers,

Hammel, Riglander & Co., 35 Maiden Lane, New York,

who will inform you of the nearest Jobber who will supply you.

NOTICE.

The importers of these mainsprings are the first to have employed the idea of putting each spring in a separate box, thus protecting them against rust and climatic changes, and to place a number of these small boxes in a box or case.

They have taken expert advice as to their sole and exclusive right to this manner of "dressing" mainsprings, and have been advised that they have a proprietary right thereto.

The trade is hereby notified that any infringement of this manner of "dressing" mainsprings for the market will be vigorously prosecuted.

Philadelphia Watchmaker Possessor of Famous Boulé Clock.

A FRENCH Boulé clock, of the make famed the world over for the artistic conception and richness of design of the cases, and which won a bronze medal at

EXQUISITELY WROUGHT BOULÉ CLOCK.

the Nuremberg Exposition, 1885, is now the property of C. Jules Graf, watchmaker for the B. F. Williams Co., 726 Chestnut St., Philadelphia, Pa. A photograph of the clock is herewith reproduced. The timepiece is now at the home of Mr. Graf, 1214 Montgomery Ave., and is frequently viewed by clock and watch makers of Philadelphia at the invitation of its owner.

Charles Andreé Boulé, who made the famous clocks in the reign of Louis XV., during which regime he was the royal cabinet maker, was born in 1642 and died in 1732. He was the inventor of the inlaid work of tortoise shell, which is one of the remarkable features of the particular clock owned by Mr. Graf. The tortoise shell is inlaid in bronze, and the effect is beautiful. The timepiece stands 48 inches high and is 20 inches in width. The case is adorned with gracefully sculptured figures of bronze, symbolical of light and time. An angel in graceful pose surmounts a globe on top.

Immediately above the dial is the bronze figure of a dragon, and on each side, opposite the dial and at the vase of the clock, are other symbolical figures. The movement is the work of Jean Arthers, a Parisian watchmaker, renowned during the reign of Louis XV. The movement also is remarkable for its ingenious construction. The clock strikes, melodiously, the half and full hours and runs two weeks without winding.

Mr. Graf's clock was originally the property of a Protestant French family, driven to Alsace during the persecution of the Hugueñots. The family finally settled in Switzerland. It eventually became the property of Ch. Graf-Link, watch and clock maker of Romanshorn, Switzerland, who has given it to his son, C. Jules Graf, of Philadelphia.

The Days of Wooden Wheel Clocks.

"CLOCKS have changed the most in the last 50 years of the minor domestic things," said a veteran of the old Dutch days of the Wyoming (Pa.) valley. He left the pleasant banks of the Susquehanna in his early manhood, says a writer in the New York *Tribune*, and became a merchant and public leader in a western New York city, but he has never forgotten the scenes of his younger days. He went on:

"When we are surrounded on every side by the evidences of advancement in electricity, steam and the tremendous factors in life, we lose sight of those smaller integers of human comfort whose absence would enforce itself upon us in a moment. Clocks form one of these classes, and I never look upon one of the complicated eight-hour timepieces, with a calendar hand, an alarm and all the numerous mechanical devices which have made them perfect, but what I see in my mind's eye the primitive sundial in the back yard at Forty Fort and the square black clock, with its wooden wheels and resonant tick-tock which followed that. I wonder how many of them are left. When I went away from the valley, a few of the more luxurious were beginning to experiment with brass wheeled clocks.

"Now, all this was only about 65 years ago. Remember that. Not much over half a century ago the inhabitants of the great State of Pennsylvania, hardly a day's journey from Philadelphia, were trusting to their sundials for the time of day. The first clocks which may be classed as modern came from Connecticut. Of course, in many farmhouses were standing the tall corner, or so-called Colonial, clocks, but the smaller and more compact kind were not introduced until about 1840. They had wooden works, and were run by weights. At first the German settlers were a little shy of them, chiefly, I fancy, because they were sold by the Yankees. We had heard about those Yankees and the New England conscience, and passed by on the other side. But after a time one and then another bought them, and their use became common. But the question arose how to keep them right. My father still trusted to his sundial, and it was my duty at noon to stand in the back yard and shout out when the sun's shadow stood upon the noon mark.

"One sad feature marred the complete success of these clocks. Their wooden wheels would swell. On wet and stormy days the works would expand, and the clocks go slow; on dry days the wood shrank, and the clocks would hustle along at a ruinous clip. Consequently, about the only time we could trust them was in the dry, cold days of hard winters. In wet and open winters they were as bad as in the early spring and late fall. One man, however, achieved a reputation for having the most accurate wooden clock in our part of the valley. He prided himself upon it, too, and this is how he worked it: In the winter he kept his clock over the mantelpiece in the sitting room, where it would be just right in temperature, and in the summer he stood it in the creamery, under a varnished box, which fitted into a groove. Getting the time of day from him was a ceremony.

"But the wooden wheels were destined to pass away before the harder brass ones, such as are now used. My father owned one of the first brass-wheeled clocks in the valley, and showed it to all curious neighbors on Saturdays and Wednesdays until the township had been satisfied. It was wound up with a key, and I think that father won many an honest vote for sheriff be-

cause he allowed so many of his friends to use the key.

"The most picturesque timekeepers were, of course, the sundials. Every farmer had one. Generally they were primitive, home-made devices, but inasmuch as the sun could be depended upon, they served their purpose with satisfaction. The first one my father used he made himself out of a piece of sheet iron and a flat white board. It was necessary for the dial to be set, of course, and the way it was done was this: Father knew a neighbor who had a watch. This neighbor happened to go to Philadelphia just about the time father had finished the dial, and he was asked to set his watch with great care in the city. When he returned he came over on the first bright day, and in the presence of the entire family father drew the straight line which marked the sun's shadow when the neighbor's watch pointed at noon. That lasted us for a good many years.

"Some of the dials were made to order in Philadelphia with heavy ornamentation and set up in the front yard, like jardinieres are now. But we looked upon such things as idle ostentation. Of course, these dials all registered differently. That is, in those days every man who owned a dial was the proud possessor of his own time. Nowadays we are all subject to the click of a telegraph instrument at Washington. Then there were as many noons as there were people to enjoy them. It was my private opinion that our dial was not really right for our meridian, because the neighbor's watch was set in Philadelphia, and our line adjusted to it without making calculations of the true difference between the two places. But once set, the dials could never go wrong, although on dark days we had to depend on our stomachs to set us straight, unless we carried watches.

"Clocks were a great improvement, even if they did come from Connecticut, but somehow I always had a deep affection for the weather-beaten old sundial. No, they didn't cost as much as some clocks do now, those old wooden ones, but you could buy two dozen excellent timekeepers with a dozen attachments now for what one cost then. I think the smallest and cheapest wooden clocks cost about $25, while the brass ones, when first introduced, brought as much as $75."

A Repeating Watch of the Last Century.

AN interesting and fine specimen of the repeating watch, dating from the beginning of the last century, is illustrated herewith. The watch was made by Ate Droz, one of the renowned watchmakers of that name in Switzerland. The dial and the case are of the Empire style. The latter is very strong and made of 18 karat gold, with the old style color.

The movement has a cylinder escapement —the Breguet jewel cylinder, which, notwithstanding its work during a whole century, is still able to keep good time, its pivot bearings having recently been jeweled by P. Breivogel, a New York watchmaker.

In Fig. 1 is shown a front view of this fine old timepiece. The leverage and repeating mechanism, shown in Fig. 2, is fixed on the back plate of the movement. In most repeating watches this mechanism is fixed on the front plate, underneath the dial. The small mainspring, which supplies the power for the striking, is wound up by pushing the pendant, which in turn pushes a lever to which a steel chain is attached. The opposite end of this chain is

FIG. 1.

fastened to a roller which itself is fastened by a square hole upon the square of the striking spring arbor.

The repeating train is composed of five wheels and pinions, called runners, and is placed on the edge of the large pillar plate

FIG. 2.

near the great barrel. The purpose of this train is to regulate the interval between the strokes of the hammers, which, in the present watch, strike the full and the quarter hours. The sound of the gongs is melodious, clear and loud, and gives a perfect imitation of cathedral bells. The musical ring which characterizes them makes one wonder at the skill with which the ancient watchmakers treated the then known metals.

The points of gravers are frequently injured by ill-kept oil-stones. Keep clean and flat the surface of the stone on which the gravers are set and good results will be obtained.

The Angular Decimal Reform.

(Lecture of M. DE REY-PAILHADE at Marseilles, reported in the *Semaphore de Marseille.*)

AT the last meeting of the Industrial Scientific Society, presided over by M. de Monticher, M. de Rey-Pailhade, ex-President of the Geographical Society of Toulouse, entertained his audience with the subject of the employment of the centigrade division of the quarter of the circle for nautical calculations.

The great geodesic work for the map of France, on the scale of 1-80,000, has demonstrated that this logical system of angular division abridges nearly one-third the duration of the calculations, diminishes the proportion of errors, and exacts less mental tension. Notwithstanding these great advantages, the Navy, not following the example of the Army, has continued to make use of the division of the circle into 360 degrees.

The lecturer, having published numerous memoirs on the application of the decimal system to nautical calculations and to science in general, the question has been agitated in all scientific circles. The Minister of the Marine has caused experiments to be made on three war vessels, which have given satisfactory results.

M. de Rey-Pailhade showed that the reform could be readily and inexpensively made. The conversion of the angular graduation of the marine tract-charts is effected on the old charts. Thirty francs are sufficient for changing the silver plate of the sextants, on which the angles are traced. The new chronometers cost no more than the old, and are converted only as they are needed. The nautical tables and the logarithmic tables are already printed.

One table only is lacking, the list of the position of the stars, called the decimal Ephemerides, calculated in grades (the 100th part of the quarter of the circle). In confining it to the sun and the principal stars, six pages will be sufficient.

A petition for the general publication of the Ephemerides is already covered with signatures. This reform, reducing the nautical calculations to the decimal type and omitting the marine mile, which will be replaced by the kilometer, corresponding to the centigrade arc at the surface of the earth, will render the greatest service to navigation. It will complete the admirable work of the decimal metrical system, the establishment of which will always remain one of the most brilliant glories of France.

The Horologist-Poet Again.

THE seeming inability of anyone to keep the old City Hall clock at Baltimore, Md., in proper order has inspired a local bard to write the following lines, recently printed in the New York *Sun*:

THE CITY HALL CLOCK.

Oh, for Teddy's friend,
John Mitchell!
To keep the old clock
On a strike!

Oh, where is Mr. Preston,
Who manages the town?
If it will never strike again,
Why don't he tear it down?

S. L. K.

The Oldest Existing Horological Periodical in the World.

(Compiled for THE JEWELERS' CIRCULAR-WEEKLY from the *Revue Chronometrique.*)

ALTHOUGH modern horologists rarely have occasion to consult the *Connaissance du Temps,* readers may find a short notice of this publication interesting and not altogether useless. It was indispensable to the old horologists; now it is scarcely more than the *vade-mecum* of astronomers and nautical men.

It was in 1678 that Picard commenced the publication of these ephemerides, a publication which has since been continued without interruption.[1] The idea of this work came to Picard because the ephemerides of Hecker,[2] calculated for the meridian of Urienburg, ceased publication in 1680.[3] So

TITLE PAGE OF AN OLD HOROLOGICAL JOURNAL OF THE 17TH CENTURY.

he planned to make his own known to the public for the meridian of Paris.

The initial volume, a 12mo., had 64 pages. The title of the original may be thus translated, "The Knowledge of the Time, of the Calendar, and the Ephemerides, the Rising of the Sun, of the Moon and the Other Planets, with Eclipses for the Year 1679, Calculated for Paris, and the Method of Using These Calculations for Other Latitudes, with Several Other Tables and Summaries of Astronomy and of Physics, and Ephemerides, with Figures."

After Picard's death, Lefèvre continued the publication, under the title of which his name appears from the year 1685. From 1701, in consequence of his controversy with La Hire, Lefèvre having been excluded from the Académie des Sciences, the work was conducted by Lieutaud until 1729. The controversy was aggravated by the preface inserted by Lefèvre at the commencement of the volume for 1701, but the preface was suppressed or replaced in most of the copies. These are the names of Lieutaud's successors, all like him members of the Académie des Sciences: Godin, 1730; Maraldi, 1734; Lalande, 1760; Jeaurat, 1776; Méchain, 1788.

By the law of Seven Messidor of the year III. (June 21, 1795) the National Convention created the Bureau of Longitudes. Among the obligations imposed upon it, was the publication of *La Connaissance des Temps.* At that time Lalande resumed the direction, which he continued until his death, in 1807. Since 1795 the annual volume has contained only the imprint, "Published by the Bureau of Longitudes."

The form and composition of each volume remained nearly the same until 1760, the date of the accession of Lalande. From that time its progress was marked by ascending steps, especially in the years 1808, 1817, 1820, 1832, 1838, 1840 and 1849. Thus the 64 pages in 12mo. have gradually increased to an octavo of 950 large pages.

If watchmakers now have little use for *La Connaissance des Temps,* it was not so from the origin down to the early part of the 19th century. Until 1816, clocks, pendules and watches were regulated officially for the true time, and the horary equation tables were often consulted by artists and amateurs. So, these tables and that of the elevation of the pole, which was indispensable to the numerous constructors of solar dials in the 17th and 18th centuries, occupied an important place among the subjects of each volume.

At its origin in 1795, *l'Annuaire du Bureau des Longitudes* was entirely extracted from *La Connaissance des Temps* in order to constitute an annual register "suitable for regulating those of the entire Republic." This annual, at first of modest size (80 pages), included the calendar and tables appearing in a former edition of *La Connaissance des Temps.* Since, it has always furnished the calendar and tables for the dates, one, two and even three years posterior to the date for publication.

The course is still the same, but to the calendar and tables extracted from *La Connaissance des Temps* have been added numerous memoirs, reports and articles, by reason of which the *Annuaire du Bureau des Longitudes* has acquired an importance which makes it a strong competitor for the initial collection, which is now scarcely more than the tutelary saint of navigators.

The illustration shown herewith, figured with slight variations, in the copies anterior to 1730. At that date it was replaced by a composition of similar spirit signed Ph. Simonneau *filius inv. et sculp.*, which disappeared in 1760 and was not replaced.

[1]Picard (l'abbé Jean) born at La Flèche, in 1620, died at Paris about 1682; a distinguished astronomer, who was the first to determine accurately the measure of the meridian.

[2]Jo. Heckeri. *Ephémérides motum coelestium (ab anno 1666 ad annum 1680), ad meridianum uraniburg cum.*

[3]Urienburg, the chateau of Tycho Brahe, the celebrated astronomer (1546-1601), in the island of Hven, where the Observatory of Halleburg was situated.

J. C. Peers, Rockford, Ill., is attracting attention to his show window by displaying a silver teapot showing the process of manufacture from the moment it is a round piece of metal until it appears as a finished product.

The Horologist Antide Janvier and Marie Antoinette.

ANTIDE JANVIER, who was born at Saint-Claude-du-Jura in 1751 and died in 1835, was celebrated for his success in the representation of the celestial movement. He joined rare intelligence to superior mathematical ability.

In speaking of his planetary mechanism and clock-work, *Les Merveilles de l'Horlogerie* relates the following:

Antide Janvier constructed in 1790 a complicated revolving sphere, by means of which it was easy to ascertain immediately the time for any longitude of the globe. This mechanism, which Louis XVI. desired to purchase, was taken to the Tuilleries to be presented to him, but there an unexpected disgrace overtook the inventor.

A few minutes before the king entered the apartment where Janvier was present with his clock, the Queen, Marie Antoinette, came in and asked to see the new invention. M. de Brezé led the way to the artist, who was prompt in explaining his work. The Queen listened attentively and then inquired how the time would be ascertained.

Janvier referred to the name of Paris on the chart and observed that each meridian came on the scale of longitudes at the exact minute. "Now, madam," he said, "suppose that you wish to ascertain the time for any locality, Metz for example—." At this word the Queen who had leaned over to observe the geographical dial more closely, stood up suddenly, stepped backward, and casting a lightning glance at the stupefied artist, passed out with her two children and M. de Brezé, who followed her.

Janvier was dumfounded, but he quickly comprehended that the retirement to Metz, which the king had arranged to take from Versailles, but which he was constrained to abandon, was regarded by the Queen as the exciting cause of a satirical allusion.

Timepiece of Ancient Make Presented to the Pope.

AN interesting gift to the Pope on his pontifical jubilee was an ancient clock, in the form of a planisphere, dating from 1725 and recently described in the Philadelphia *Record.* It was constructed at Plaisance by the mathematician Barnardo Facini, who presented it to the wife of Philip II. of Spain.

The planisphere gives the hours and the minutes, according to the Italian and Spanish style, the length of days and nights, according to the seasons, the daily position of the sun according to the signs of the zodiac, solar and lunar eclipses, the real seasons and the seasons according to astronomy.

Notwithstanding the enormous progress made in mechanics since its construction, the movement of the wheels is absolutely unknown. When once it broke down, no one was found able to repair it.

A jeweler of Portland, Ore., recently had on exhibition an ancient clock, which one of his foremen brought from the Island of Fohr, on the coast of Schleswig, Holstein, where it had been keeping time for 175 years.

Workshop Notes and Queries.

[Answers are solicited from our readers to the questions published weekly on this page.]

QUESTION No. 428.—**Gold Solution.** *I want a formula for making a small quantity of gold solution of a* 10 *or* 14 *karat color for job work.* *J. W. B.*

ANSWER:—Two solutions employed and recommended by Roseleur have been given recently to answers Nos. 320 and 414 in the issues of Dec. 17, 1902, and March 25, 1903. If these solutions are of too great a quantity take half or one-third of each part. By manipulating the articles in the bath described in these answers you can obtain the desired and various shades of gold.

QUESTION No. 429.—**Time Keeping.**—*I have a* 14 *size Waltham* 7*-jewel watch which I wind up at* 10 P. M. *and set it right. At* 7 A. M. *it is one minute fast. From then until* 8 P. M. *it keeps very good time. When I wind it again at* 10 P. M. *I find it has lost half a minute during the last two hours. The watch is hanging all the time.* *J. J. C.*

ANSWER:—Such a variation is not unusual in an ordinary watch. The main cause of it may be found in the escapement. Perhaps there is too much locking, or the regulator pins may be too far apart. See the several other causes explained in *Heinrich's Horologica,* page 87, issue of Nov. 26, 1902.

QUESTION No. 430.—**Tweezers.**—*What is the best form of pliers for turning a balance?* *J. J. C.*

ANSWER:—We think you will find the Seewald's new balance truing tweezers very practical for that purpose. They are No. 3282 in the Swartchild's catalogue, and cost $1.25 for two pair. You can obtain them from any watch material dealer.

QUESTION No. 431.—**Cleaning of Watch Movements.**—*Is a cleaning compound composed of ammonia, alcohol and prepared chalk injurious to watch movements?* *R. R. T.*

ANSWER:—Such compounds should not be used for cleaning watch movements. They not only remove the gilding but also make the watch more dirty, as the cleaning paste will settle and harden in every small corner and part of the watch. If a great deal of care and time is not spent in removing all chalk from the pivots, pivot holes, etc., the oil will also be spoiled in a short time. Many different watch cleaning methods have been advocated, one more complicated than the other. We think, however, for the ordinary purpose the simple use of benzine is the most practical. Take a benzine cup of glass with a cover, sold by all watch supply dealers, fill it about three-quarters full with benzine and lay in it all parts of the watch. Benzine does not dissolve shellac, so you can also lay in it the lever and balance without danger of loosening either the pallets or ruby pin. Have at least two brushes, one medium soft, which, when dipped in benzine, serves to clean all parts of the watch, especially where old oil sticks. After this first rubbing dip the watch part again in the benzine and wipe off with a clean piece of linen which does not fray. The last touch is then given by holding the watch part between tissue paper and polishing it dry with a clean, dry and soft brush. The brush may be rubbed from time to time on a piece of dry chalk but very little of it should be used. Pegwood is also used to clean the pivot holes, the settings of the jewels, the leaves of pinions, etc., and pith for all the pivots.

QUESTION No. 432.—**Rose Color.**—*Kindly give me in the next issue of your valuable paper the receipt to give a rosecolor to gold.* *A. W.*

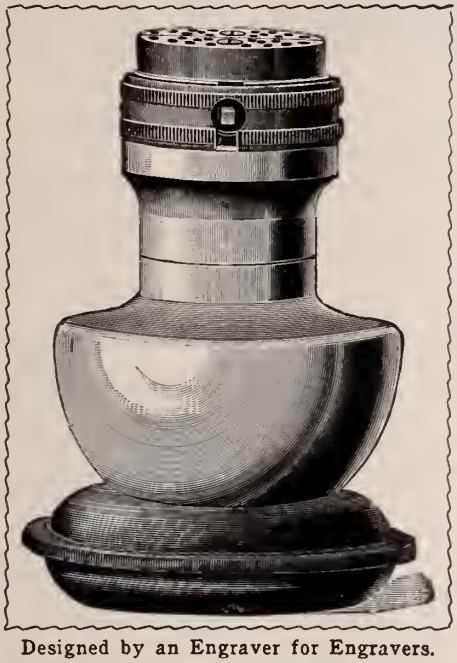
ANSWER:—First make a bath to color red. To a solution of cyanide of gold add a small quantity of cyanide of copper solution and employ a moderately strong current. It is best in making these additions to begin low by adding a very small proportion of the copper solution at first, and to increase the quantity gradually until the required tone is obtained, since an excess of the copper solution would produce a deposit of too coppery a hue. The rose or pink color may now be obtained by first gilding the article in the usual way, then depositing a slight coating in the above bath, and afterward depositing a mere pellicle of silver in the silvering bath. The operation requires great care in order to obtain the desired pink tint. The article is afterward burnished; but since the silver readily becomes oxidized (unless protected by a colorless varnish) the effect will not be of a permanent character.

QUESTION No. 433.—**To Solder Rings.**—*We shall be obliged if you can tell us through your valuable paper the correct way to solder rings without removing the stones.* *B. M. M.*

ANSWER:—"The Jewelry Repairers' Hand Book" answers this question fully. It says: "Set rings broken at the joint are the easiest to repair, as all that is necessary to be done is to file the broken ends even and to join them so that they meet nicely, without any pressure and with the same curvature of the ring. A joint of this kind will solder well, but where the ends meet with pressure they will, when heated, spring into a V-shape and cause considerable trouble. Having joined the broken ends, take a piece of tissue paper and fold it until it is about one-half an inch wide and from three to six inches long, according to the size of the set to be protected. This is saturated with water and wrapped around the set, after which the joint is coated with borax paste and a small piece of solder applied. To solder the joint thus prepared, hold the set between the thumb and forefinger of the left hand and blow a strong flame onto the joint, and somewhat on either side of it, until the solder flows. As soon as this is done, dip the soldered part into pickle and rinse it in clean water. The tissue paper is then removed and the surplus solder filed from the inside of the ring with a fine half-round file. Then the ring is placed on a mandril and "rounded up." This done, its sides and surface are filed even and smooth with a fine file, and the stones accurately fastened so that they will not be lost while the ring is being polished or worn.

QUESTION No. 434.—**Gilding by Dipping.**—*In your issue of Feb.* 11 *was given a dipping process which I had executed by a chemist, but the article will not take on any gold coloring. Will you kindly tell me if there may have been a mistake in the hydrocyanic acid, as this may not be permitted to be used in more than two per cent.?* *E. W.*

ANSWER:—If the chemist used two per cent. instead of 12 per cent. hydrocyanic acid, then the receipt would only contain a total of 16 per cent. instead of 96 per cent. Receipts must be executed exactly as they are prescribed; to use chemicals just as good will never do. Chemicals must be bought of reliable firms and must be of pure quality. If your chemist has used two per cent. hydrocyanic ac might also have taken articles which are just as good for the other chemicals. If you ordered him to use 12 per cent. acid and he gave you only two per cent., we think you need not pay for the mixture, providing he had not told you beforehand that he is not allowed to give you stronger than two per cent. hydrocyanic acid. It is also more than likely that the chemist does not know how to clean articles that must be gilded. That the formulæ we have given have stood the test, is proven by the following which is recommended by Dr. George Langbein: Crystallized sodium pyrophosphate, 2.82 ounces; 12 per cent. prussic acid (hydrocyanic acid), 4.51 drachms; crystallized chloride of gold, 1.12 drachms; water, 1 quart. Heat the bath to the boiling point and immerse the pickled objects of copper or its alloys, moving them constantly until gilded. Iron, steel, tin and zinc should be previously coppered. All gold baths prepared with sodium pyrophosphate give rapid and beautiful results when fresh, but they have the disadvantage of quickly decomposing, and consequently can seldom be completely exhausted.

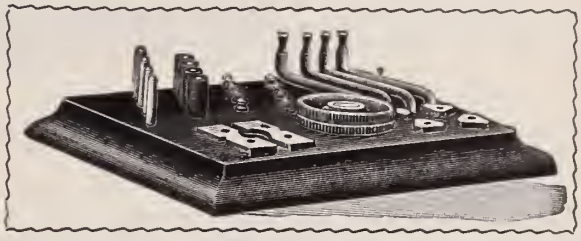


QUESTION No. 435.—**Winding.**—*Will you please inform me through* THE CIRCULAR-WEEKLY *what difference it makes whether a watch is wound up at night or in the morning?* *J. J. C.*

ANSWER:—When a watch is wound up at night, coming out of a warm pocket and laid down or hung up in a cool place, the mainspring will contract by the cooling off of the metals. Being wound up tightly all means of contracting have been shut off and the spring is bound to break. If, however, the watch is wound in the morning, having partly run down during the night, there is room enough left in the barrel to contract. Another reason why it should be wound up in the morning is because it will then make greater vibrations and thus will be in a better condition to resist the disturbing movements of the bearer during the day time. Being in a horizontal position during the night and running with less power, the horizontal position, in which the balance runs more freely, will operate to make the length of the vibrations of the balance during the night equalize as nearly as possible those of the day time, when it makes long vibration, the mainspring being entirely wound up, *i. e.*, the watch running with full power.

THE SPECIAL

DUPLEX BASE



Anti-Friction Engraving Block.

Designed by an Engraver for Engravers.

Nickel-plated.
With Swivel Jaws.

Designed and Manufactured by
Adolph Muehlmatt,
Cincinnati.

Perfection of construction, shape and workmanship. The Special is not a cheap engraving block, but a first-class article of improved design. Complete, with attachments and leather pad, $6.00.

THE RAMBLER'S NOTES.

WHAT THE RAMBLER SAW AND HEARD AMONG THE DEALERS IN ART POTTERY, CUT GLASS, BRONZES, ETC.

BOHEMIAN INTAGLIO AND CAMEO GLASS.

JEWELERS will find a large and complete line of Austrian intaglio and cameo glassware in the showrooms of Charles Ahrenfeldt & Sons, 52 Murray St., New York. This glassware is made up in a large variety of forms and sizes from the small comport and bon bon dishes to the large platters and rose centers. Its chief characteristic is its simplicity. The decorations consist of gold leaf and vine patterns, showing strawberry and other fruits and plants in the color of the fruit. These decorations are made by first grinding out with the wheel the under side of the glass in the pattern desired. The gilt or coloring of the flower is then applied to the ground-out patterns from the outside, thus producing a cameo and intaglio effect when viewed from the top of the dish. The decorations are all dainty, and the general style of the glass, while not new for this season, possesses characteristics that will place it with the best selling lines of fine glass. In addition to this line the concern has some fine pieces of rainbow glass and some fine specimens of vases decorated in tulip style. The latter ware comes in all of the high colors and fine shades of the rainbow variety and is made up in a number of forms.

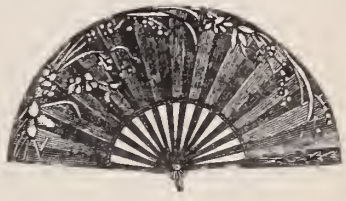
*

METAL MOUNTED GLASS WARE.

METAL mounted glass wares in a variety of new shapes and designs have just been received from Austria and France by L. W. Levy & Co., 194 Broadway, New York. This ware shows originality in the treatment of the decoration, as well as the finish of the metal used as mountings on the glass. The glass comes in all varieties of colors and finishes from dull, dark shades to light, transparent colors, with high luster, and the metal mountings, which are sometimes applied in relief on the glass and sometimes used as rims and bases, show both figure and floral designs and *art nouveau* effects. The samples of this ware are made up chiefly in vases, centerpieces, ash-trays, card receivers and other ornaments, and the selection offered is particularly large and rich. Supplementing this line are a number of novelties in copper and brass, which consists of smokers' sets, ash trays and card receivers. These wares come in two distinct colors, the relief decorations constituting one color and the body of the piece the other. The principal colors employed are old bronze combined with a very dark green, the latter being set off to fine advantage against the bronzes and gives the ware a striking effect. A feature of this line is the variety of shapes into which the various pieces are made. In the main they are distinctly new, but many of them are modifications of antique objects of art metal ware.

*

NEW EFFECTS IN GILT CLOCKS



ONE of the new features in the lines carried by S. B. & C. B. Clarke, manufacturers' agents, 46 Park Pl., New York, is the large assortment of gilded statuettes, figures and Cupids, which, posed in various attitudes, support a small clock. The artistic arrangement of these figures and the decorations and the ingenious method in which they are made to support and hold timepieces, is worthy of notice. These are all domestic goods and show good workmanship and finish. There are a variety of finishes seen in the figures, the principal ones being the mercury gilt and the antique verde. This verde is a very delicate shade and is combined effectively in several instances with the bright gilt in such a way that the details of the figure are brought out plainly and artistically. A larger variety of pieces will be received by the firm from the factory within a few days in other finishes and colors, including maroon, antique verde, violet, French gray, bronze copper and combinations of these hues. In addition to the statuettes, the concern is also exhibiting a line of metal mounted lamps and lamp shades, showing Oriental effects in decoration and design. These lamp shades are made of cathedral glass, mounted in Japanese, bronze, copper and metal, in Turkish, Japanese, French and Oriental designs. Many of the shapes are distinctly new, and all of them show original and rich effects.

THE RAMBLER.

Olmstead & Hurdman, Ottawa, Can., are giving up business and Mr. Olmstead will manage the Ottawa branch store of Henry Birks & Son, Montreal.

Workmen are engaged in the tower of the City Hall, at Winnipeg, Man., making preparations for the installation of the clock to be placed there by Andrew & Co. The coverings of the dial spaces have been removed on the north and south sides and timbers placed for the rope rigging necessary to elevate the clock, which will all have to be done from the outside of the building.

Chromatic Changes in Gems and Artificial Coloring and Burning.

ONE might imagine that the color of gems is perfectly fast to light and that their appearance remains unchanged, because they are noted for their hardness and chemical constancy, but this is known not to be the case, and various experiments have demonstrated that precious stones are liable to fade. Even in the case of emeralds, sapphires and rubies, which rank among the highest colored gems, a change of color has been observed after these stones had been exposed to the light for a long time. As a proof of this assertion the following example may be cited:

A ruby which was kept for two years in a light place was found to be much paler in color after that time than a stone originally of the same color which had been kept in the dark.

Gold topazes and garnets suffer a change in their color in a still shorter time. The topaz loses in light, while the garnet acquires a cloudy and dull shade, and even the fire possessed by new stones is appreciably lessened by the action of light. The change in the color of the turquoise is sufficiently known. In this connection we will touch the partial change in the color of the opal, but it is necessary to first know the composition of this stone.

The changing hues of the opal are due to innumerable clefts and cracks in its body which cannot be observed with the naked eye, but only with the aid of a microscope. These fissures are doubtless caused by a gradual and slow drying up of a silicic acid solution present. The mass proper of the opal consists of hydrous silicic acid, which, with the aid of the action of nature, is transformed into the said colors. It is especially advisable to protect this stone from heat lest it might lose its play of colors through undesired desiccation.

The same thing is true of various pearls, because their components of carbonate of lime and their exterior are combined with a mucilaginous or horny secretion of the shell oyster. The color and peculiar smoothness of pearls is also greatly acted upon by the touch or the perspiration of the hands, especially the latter, because the perspiration, which consists of acid, exercises a dissolving action upon the lime carbonate. Besides this the great brittleness of pearls is well known. For these reasons pearls have to be more carefully handled than the other stones.

Therefore, it sometimes occurs, says Adolf Wruck in the *Journal der Goldschmiedekunst*, that precious stones are baked or dyed or both processes are employed together. Not only a greater permanency of the color of the stone is obtained thereby, but it is also possible to remove bad spots, and the natural color is often considerably increased by baking. As a rule only porous and soft stones are colored, since the liquid penetrates them better and distributes itself more over the stones.

Experience has demonstrated that several liquids may often be used in rotation, by whose action chemical deposits are formed from which in turn the various colors emanate. Such a coloring is not merely superficial, but permeates the stone completely. The different hues are black, blue, red and yellow. Stones which are to be dyed black must be previously washed thoroughly and dried, cold; next they are laid into a thin sugar solution, which is poured into a perfectly clean pot; there must be enough of the solution to completely cover the stones. A honey solution will do the same service, and can, therefore, also be recommended. The whole must be warmed evenly with the stones for two or two and one-half weeks, but the mass must never be allowed to boil. When this has been conscientiously attended to, the stones are taken out and thoroughly rinsed off. Next, they are placed in another vessel filled with sulphuric acid in which the stones are again warmed. It is at this time that the coloring proper commences. The honey or sugar solution, which has penetrated the stones, is decomposed by the sulphuric acid, setting free carbon with which the stone is dyed black.

The coloring process must be extended according to the kind of the stones. Some varieties turn deep black in a few hours, while others have to lie in the sulphuric acid for one or two days. There are even some that will acquire only a faint black color despite all efforts. When the stones finally exhibit a satisfactory color they are withdrawn from the acid and dried quickly. Then they are smoothed and polished and finally rubbed with oil.

This process is employed for the various onyx stones. As is well known onyx is most valuable when it exhibits the so-called onyx streak. The original grayish-blue bands are replaced alternately by black stripes. The business of coloring these stones is quite lucrative, when we consider the fact that the price varies from 50 cents to $25 per kilo, which shows that fine deep black specimens are well paid for.

Agates are given a handsome lemon color by laying the stones in a solution of hydrochloric acid, which is heated uninterruptedly for about two weeks, together with the stone.

A handsome pale sky-blue at times passing into a deep indigo blue, is produced by soaking the stones in prussiate of potash (blood lye salt) and subsequently boiling in a solution of green vitriol. By the combined action of both substances a so-called Berlin blue is generated which extends over the whole stone.

A pretty green shade is obtained by the use of chromic acid, but after the stones have absorbed the acid they have to be subjected to strong heat. Saturating the stones with green vitriol produces a fine red color, but thorough calcination has to follow in this case as well.

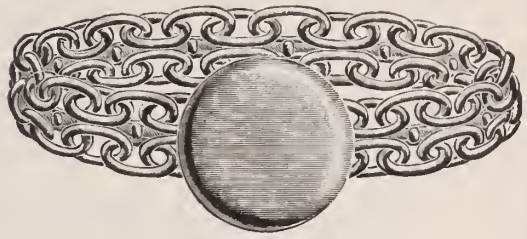
A difficult but quite lucrative task is the coloring of carnelians. These stones are most valuable when they exhibit a black-red hue, their general tint being yellowish or brownish. This reddish-black coloring, which appears blood red on looking through the stone, is obtained by an iron compound in which the stones are steeped.

The stones which are yellow or brownish in appearance contain too little iron. This is supplied by throwing small iron parts or nails into nitric acid, uniting this with the stones to be treated and heating all together. The iron parts are dissolved by the nitric acid, and the acid saturated with iron is absorbed by the stones. Next the stones have to be calcined at moderate temperature, whereupon they acquire the above mentioned red color. Skill in this operation requires experience, for the stones may easily lose their solidity and be completely ruined by overheating.

In the same manner as a handsome color is produced by means of acids, burning alone may be resorted to, for in the above mentioned processes acid is employed in burning, while burning is sometimes used as an aid. The latter process requires still greater care.

The stones which are to be burned must be inclosed before the operation in a powdered mixture consisting of coal dust, iron filings, unslacked lime, also charcoal and fine sand. The sand, however, must not be used alone, but should be combined in a very slight quantity with another body, *e. g.*, iron filings. To obtain good results by burning it is necessary for the stones to receive a light and gradual heat; likewise, in order not to lose in color or even split they must be cooled only gradually. As said before, special knowledge is required for these manipulations, because every gem needs punctual treatment, since the temperatures to which the different classes of stones have to be subjected vary enormously. Often only a little heat is sufficient, while other stones must be thoroughly heated to attain the desired color. The burning will materially alter the color of the stones, for which reason this process is employed only for such specimens as are expected to acquire a greater value by the change of hue.

Sapphires are rendered perfectly colorless by annealing; the same thing applies to the hyacinth, the wonderful fact in this case being that its luster is considerably increased after the annealing. Thus the amethyst, if enveloped in sand and iron filings, may be caused to lose its spots. A transformation of the violet color into yellow, however, is accomplished by strong and protracted annealing. On the other hand, the topaz is rendered rose-colored by slight annealing.



Sometimes the stones have opaque spots or clouds; these clouds are also sought to be removed or burned by annealing. Frequently we come across stones with very fine cracks in the interior. These fissures can be caused to disappear by boiling in very fine oil, thus filling them up and rendering them invisible. If the crack cannot be removed in this manner, the defective places are ground out so that the stone receives the shape of a very thin shell.

Various other examples may be cited, but the above are the commonest in use.

Where a principal puts an agent in charge of his business and limits his authority as to the persons from whom he shall buy, or as to the amount of debt that he may incur, third persons who, with knowledge of such limitations, permit the agent to exceed his authority in dealing with them do so at their peril. (17 P. S. C. Rep. 376.)

SILVER TESTIMONIAL TO A PHILANTHROPIST.

A NEAT example of the art of the silversmith is the testimonial in the form of an engraved silver plate which was recently presented to Andrew Carnegie, the father of the steel industry in western Pennsylvania, by the employes of the Lucy Furnaces of Pittsburgh.

It was designed by the Hardy & Hayes Co., 213 Fifth Ave., Pittsburgh, and was presented to Mr. Carnegie by all of the employes of the Lucy Furnaces as a testimonial of the appreciation of his generosity in the establishment of the $4,000,000 Andrew Carnegie Relief Fund for the mill workmen. In design it is one of the most artistic specimens of the kind ever sent out of Pittsburgh, and consists of a silver plate set on the back of a Flemish oak panel 17x16 inches in size.

Around the outer edge of the silver plate is a border of Scotch thistles, symbolical of the land of which Mr. Carnegie is so fond. The body bears a fac simile of the Lucy Furnaces with the stacks dated 1872 and 1877. These furnaces were first owned by Mr. Carnegie. Between the two stacks is an engraved inscription of resolutions prepared by a committee of the furnace men. The inscription is as follows:

"Whereas, Mr. Carnegie in his munificent philanthropy has endowed the Andrew Carnegie Relief Fund for the benefit of the employes of the Carnegie Company; therefore be it

"Resolved, That the employes of the Lucy Furnaces, in special meeting assembled, do convey to Mr. Carnegie their sincere thanks for and appreciation of his unexcelled and bounteous endowment, and, furthermore, be it

"Resolved, That it is their earnest wish and prayer that his life may be long spared to enjoy the fruits of his works."

The names of the committee signed to these resolutions are James Scott, chairman; Louis A. Hutchinson, secretary; Jas. C. Daly, R. C. Taylor, Frederick Voelker, John McVaigh, John V. Ward.

SILVER TESTIMONIAL PRESENTED TO ANDREW CARNEGIE.

Mr. Carnegie acknowledged the receipt of the testimonial and resolution in a personal letter addressed to the men and received by General Superintendent A. R. Hunt at the Duquesne plants. The letter reads as follows: "I have acknowledged to Mr. Wilmont the touching tribute from the men of the Duquesne works, but I cannot refrain from telling you direct that this evidence of their regard went straight to my heart, and stays there. No fund ever founded by me has quite the charm that this has. Thanks to those who labored so long and so well for us and through whose efforts I have obtained my fortune. Every

ALVIN DEPOSIT WARE.

VASE. No. 3376.

The beauty of design and finish of the Alvin Ware has long been recognized as the highest in Silverware Art.

The accompanying illustration, which is actual size, is a fair sample of the beauty of this ware, and will be an attraction in any jeweler's store.

The glass is that wonderful greenish iridescent, showing all the colors of the rainbow, hard to obtain, and ornamented with the Alvin Deposit Ware in handsome pattern with the new French Grey finish.

ALVIN MANUFACTURING COMPANY,

54 MAIDEN LANE. NEW YORK. 41 UNION SQUARE.

Brooklyn 14 Karat Solid Gold Cases.

B.W.C.C.O.

The good times have stimulated the demand for the very highest grade of Solid Gold Watch Cases; heavier and higher grade than has been sold in the past. To meet this demand we are showing to the jobbing trade this season the largest and handsomest line of heavy 14k. Solid Gold Cases we have ever shown, thirty-six different shapes and hundreds of different patterns.

They are made with light Swiss head springs, gold dust bands, and five knuckle joints. Every case being genuine hand made throughout and finished with precision and care, has its own individuality; it is the finest line of Solid Gold Cases ever seen. Only the most skilled mechanics work on the Brooklyn 14k. Cases, because to obtain the proper style and finish of this class of Case, skilled hand labor is essential.

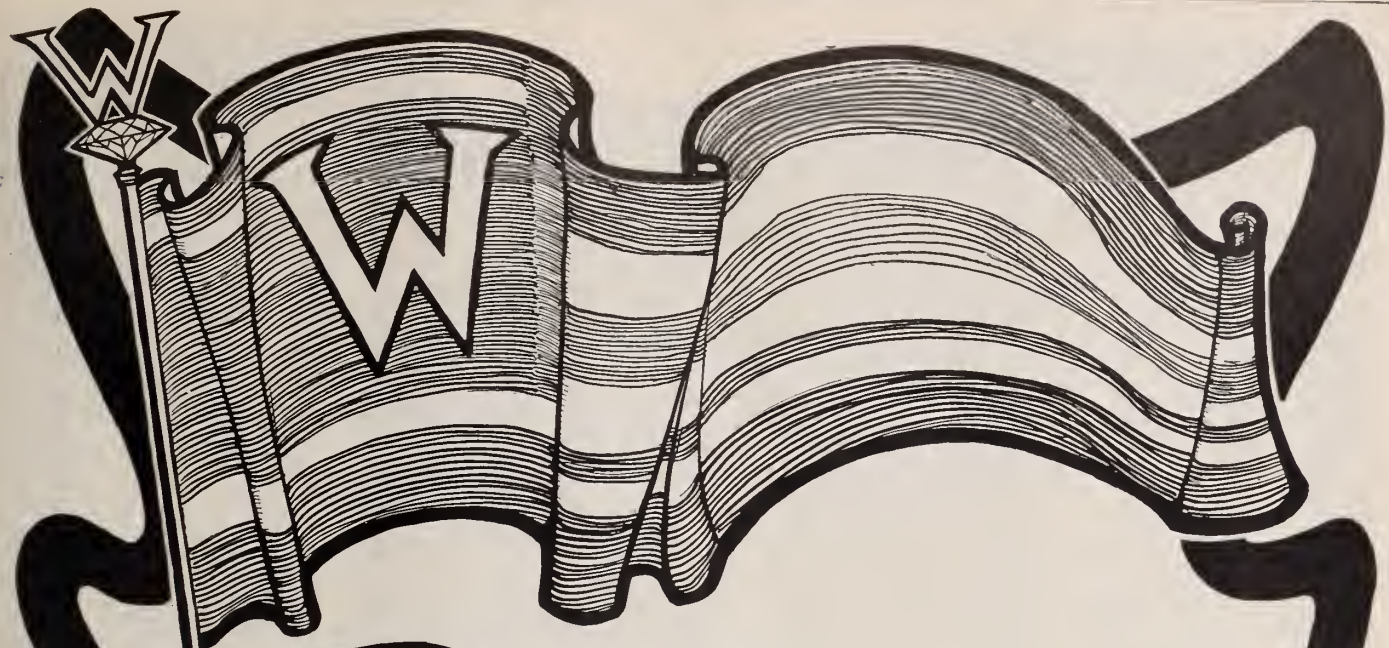
One of the largest jobbers upon being shown the line said:

"You've got all the gold case makers on the jump!"

KEEP IT ALL.

Don't give up a part of it to the middleman, don't give up a part to pay the travelers' expenses. Keep *all* the profits yourself.

Besides the extra profits that you make when dealing with first hands, there is also the greater promptness and greater reliability.



We are *cutters* of Diamonds. We sell direct to the retailer. We have no traveling salesmen. We are satisfied with one profit, and that a reasonable one. The extra profits go to you. Anything purchased of us is always as represented. There is no equivocation; there is no salesman to blame it on the middleman, no middleman to blame it on the importer or cutter. When you go to the fountain head you get the best service and the lowest price.

When you want anything in our line send to us for a memorandum package.

J. R. WOOD & SONS,

Ask your jobber for W. & D. goods.

BERT BALL ST.L.

Don't Refuse A Job

of any kind.

If you cannot do it yourself, it can be done in our wonderful shops, as we do almost everything; but if we cannot do it, we will have it done for you. This applies to such occasional jobs as *Fan, Pipe, Amber* and *Mother of Pearl Repairing; Ivory* or *Tortoise-Shell Work; New Combs, Mirrors, Brushes, Whisk Brooms* to replace old ones in *Silver Mountings; Bronze Statuary Repairing* and *Refinishing; Scientific* and *Mathematical Instruments, Barometer* and *Compass Repairing*, or any other kind of odd work that is brought to a jeweler to be repaired.

Don't let a Customer go to a Competitor's Store.

The advantage of doing business with us is to have a firm in the city that will attend to everything that you cannot do at home.

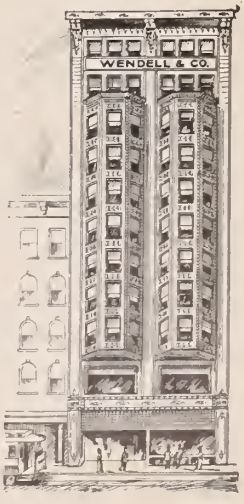
It is no bother—it is part of our business. We know the best place to send every job that is out of our regular lines of work, have messenger boys for that purpose, and the prices will be as low as if sent direct to the repairers or matchers of each particular kind of work.

We want our customers to feel that our shops are theirs, that we attend to their work, whether much or little, the same as if attended to by themselves, and that the oftener we hear from them, the better it pleases us.

Only those jewelers who deal with us regularly, and their name is legion, realize how convenient it is to have a house in the city to attend to all their special order work and repairing in a business-like manner.

Retail jewelers who send work to firms that attend to it as a matter of accommodation have no conception of the advantages of having an account with us.

Wendell & Company,



The only Firm in the Country that makes a separate and distinct business of doing all kinds of Special Order Work and Repairing for the Retail Jewelry Trade.

Two Wonderful Shops always at your service.

The Strength of a Chain

Foster's Strong Links.

Link the Fourth---Our Business Growth.

No house can build up a paying and lasting business by making goods that do not pay and do not last.

The single fact that Theodore W. Foster & Brother Company are in existence to-day after thirty years is proof positive that those thirty years have seen some pretty successful manufacturing.

There must be something about the chains and lockets that we make which appeals to the jeweler everywhere. If this is true, the same set of facts will appeal to the dealer who has not yet tried them.

If you have never sold or seen our Seamless Wire Chains and Gold-filled Lockets, you have something in the way of business yet coming to you. If you do know, you only need to be reminded that they have always proved good sellers.

Your nearest jobber carries them in stock. To make certain, always look for this trade-mark, which is the stamp of merit.

meeting I had with the working men (I had many for 29 years when located in Pittsburgh) drew me more to them. They have many virtues which rich employers lack. If both sides knew the other there would be harmony. I value this tribute more than if it were signed by the kings of the earth.

"Always your friend.

"ANDREW CARNEGIE."

Lord Anglesey's Jewel Collection.

A RECENT dispatch from London stated that Lord Anglesey continues to live up to his reputation and his income of £135,000 ($675,000). He is still adding to his great collection of wonderful jewels. He has ordered a diamond tiara to be made, which is to be exhibited in some forthcoming amateur performance at Anglesey Castle.

Those who have seen his collection of jewels describe them as being simply magnificent. He has no end of all kinds of rings, pins, studs and sleeve buttons, most magnificently jeweled. For instance, he has waistcoat buttons, studs and links of cabochon sapphires; also a set of cut sapphires, surrounded with diamonds; a set of cabochon emeralds, one of cut emeralds and diamonds; one of rubies, and two of white pearls and black pearls, some of which are almost priceless in value. Yet, with all this collection, he is constantly buying, and has therefore acquired a collection of jewels which would be the envy of the greatest Indian rajah.

New Members of the Jewelers Security Alliance.

The regular monthly meeting of the executive committee of the Jewelers Security Alliance was held at 11 Maiden Lane, New York, April 10, the following members being present: Chairman Butts, President Sloan, Treasurer Karsch, Secretary Noyes and Messrs. Abbott, Alford, Brown, Champenois and Stern, of the committee.

The following new members were elected: Nathan Poley & Co., New York; Beaumont Loan Co., Beaumont, Tex.; Bichsel Bros., Sedalia, Mo.; Keppler Jewelry Co., Anaconda, Mont.; H. L. Morrison, Pittsburgh, Kan.; Critzer Bros., San Antonio, Tex.; J. C. Dallas & Co., Temple, Tex.; Fitschon-Morse Drug Co., El Reno, O. T.; Mrs. C. Gildenmeister, E. Hertzberg and S. Rabe, San Antonio, Tex.; Fred W. Rex, Lehighton, Pa.; A. Rosenberg, Newark, N. J.; J. F. Boes and J. H. Knickerbocker, Salt Lake City, Utah; Russell E. Brigham, Oneonta, N. Y.; William C. Guerth, Baltimore, Md.; J. H. Potts & Son, Lyons, Ia.; Woods & Co., Springfield, Mass.; Will H. Booth, Sioux Falls, S. D.; Grabowsky Bros., Bay City, Mich.; Standifer & Moore, McGregor, Tex.; Stockton-Whitmore Co., Denver, Col.; Oscar T. Jonassohn, New York; Chas. B. Warner, Tuscola, Ill.

Ole Brattvet, Kenyon, Minn., has installed in his store a jewelers' regulator and a large new safe.

THE FIRST STEP in right selling is right buying. THE FIRST PROFIT IN RETAILING is the saving by wise selection of stock.

OUR FIRST SERVICE to you is in placing at your disposal a stock containing in unequaled abundance the goods that best suit your resources and patronage.

OUR NEXT SERVICE is our experienced aid to you in identifying and selecting this most suitable stock.

OUR THIRD AND GREATEST SERVICE is the assurance you take away with you that you have "bought right"—that you have secured reliable goods that suit your trade and at the most favorable prices the market can furnish.

WE STEER YOU PAST MISTAKES in buying; we know you can rely on yourself in selling.

OUR DIAMOND AND WATCH STOCK for spring trade is the cream of the world's markets. To see it is an education that will profit you.

Thief Who Defrauded Pittsburgh Jeweler Run Down and Sentenced After Chase Lasting Two Years.

PITTSBURGH, Pa., April 16.—By the arrest and confession of O. B. Patton, of Darr, Ky., the story of theft of a diamond from a Pittsburgh jeweler that led to a long chase, was closed this week and the stone was returned to Sam F. Sipe, 339 Fifth Ave. As the result of two years' work by Mr. Sipe, the United States Post Office Inspector here, and other Government officials, the plan of a clever swindler who worked through the ignorance of a rural southern postmaster has been exposed and the thief sentenced to a year and a day in the Gov-

O. B. PATTON, DIAMOND SWINDLER.

ernment Penitentiary at Atlanta, on the double charge of larceny and using the mails to defraud.

Two years ago O. B. Patton wrote to Mr. Sipe from Darr, Ky., for a quotation on a diamond of which he gave a description, and added that he wanted to see the stone before paying for it. The letter was written on a printed notehead setting forth that Patton was a dealer in typewriters, etc. Mr. Sipe replied that he would send the gem by express with the privilege of examination, but Patton answered that there was no express office in the town, but that it could be sent by registered letter, the postmaster handling the transaction.

Then a letter was sent to the postmaster, D. B. Morefield, asking him to act as agent for the firm. On the back of Mr. Sipe's letter the answer came from the postmaster to the effect that he was about to leave for St. Louis, but that Patton was all right and to send him anything that he wanted. On the strength of this letter a diamond valued at $500 was mailed to Patton, March 16, 1901. He acknowledged the receipt and said that as he was not an expert he wanted to take the stone to Winchester, Ky., and have a jeweler examine it, and if it was all right he would remit by New York draft. To show that he was reliable he enclosed a 10 days' note for $500. The sale was to be cash and the note aroused Mr. Sipe's suspicion. He returned it with a request for the diamond, but did not hear from Patton. A letter was also sent to Postmaster Morefield and the latter in answer denied any knowledge of the transaction or having written an indorsement of Patton's standing.

The case was turned over to Post Office Inspector O'Brien, of the Pittsburgh office, and after an investigation he sent it to W. J. Vickery, the chief inspector at Cincinnati. No progress was made in the case for more than a year. Last June a telegram was received here saying that Inspector Betz had arrested Postmaster Morefield on a charge of conspiracy to use the mails to defraud. Inspector O'Brien later arrested Patton in Pittsburgh, but the prisoner told such a plausible story that he was released. The next day, however, O'Brien found in a room where he had kept Patton some chewed up letters whose contents, still decipherable, proved that Patton was the man wanted. There was a quick hunt for the man and he was later arrested in Cincinnati.

Meanwhile the case against Postmaster Morefield, of Darr, was brought to trial. His defense was that the letters written to Mr. Sipe were forgeries and had been written by Patton. Morefield was acquitted.

Patton came up before the Grand Jury at Covington last October, and he swore that he was employed in a well-known hotel here when the diamond transaction began, and could prove it if given time. He got a stay of six months and the case finally came up last week. In the meantime Mr. Sipe had received information about the stone and a picture of Patton, and these were given to Inspector Oldfield, of Cincinnati, who found the diamond in Ironton, O. When the time came for trial Patton weakened and pleaded guilty to the charge of using the mails to defraud and was sentenced to the Government Penitentiary at Atlanta for a year and a day.

Mr. Sipe, who attended the trial, has returned to this city and the diamond which caused the post office inspectors and the local jeweler so much trouble is sparkling among other gems in the jeweler's Fifth Ave. establishment.

Valuable Clock Presented to Ferguson Library, Stamford, Conn.

A UNIQUE and valuable clock has been presented to Ferguson Library, Stamford, Conn., by Mrs. Alice McKenzie Jones as a memorial to her father. This clock, which was exhibited at the first World's Fair, was sent to this country after the close of the Fair, and exhibited by Tiffany & Co., New York.

It was the only clock of this design made at the time, and the spiral roll on which the hammer strikes the hours was said to have been set to the key of St. Paul's, London. It was purchased by Alexander McKenzie, in whose memory his daughter, Mrs. Jones, gave to the library the plates illustrating the tartans of the Scottish clans.

A creditor to whom money is paid by a debtor on account, without any direction as to its application has the right to appropriate it to the satisfaction of a debt that could not be collected in a court of law, either because such debt had been outlawed by lapse of time or because of any reason whereby an action could not be maintained for same. Acting Consul-General Gumpert Reports on the Silver Trade of Coburg, Germany.

WASHINGTON, D. C., April 15.—According to Acting Consul-General Gumpert, at Coburg, Germany, the consumption of silver and plated ware in the district of that consulate general (the greater part of which is situated in the Thuringian mountains) is of trifling importance. Ordinary working people and peasants rarely think of using such goods for either household or ornamental purposes, and in towns—the largest of which has a population of about 22,000 souls—the use of silver and plated ware is by no means as large as in places of similar size either in the United States or Great Britain. It is true Germany has made rapid progress during the last 30 or 40 years, and splendidly developed her economical resources. Moreover, the up-to-date and well-to-do German, through frequent intercourse with foreigners, indulges in comforts—and claims them as appertaining to him as a matter of course—which his grandparents would have repudiated as luxurious and extremely extravagant.

Spoons, trays, cups, plates, bowls and dishes, epergnes, candlesticks and candelabra made from silver or plated ware, are objects found more or less frequently in the houses of better-class people in the Coburg district. As ornaments, vases of a great variety, both as regards design and size, and flower stands are frequently in use. As favorite personal attirement, brooches, bracelets, watch and key chains may be mentioned; silver handles for canes and umbrellas have also been the fashion during these last few years.

No factory producing such goods exists in the Coburg district. Consumers supply their wants either in large cities outside the district or at local jewelers, who usually carry on the trade of a silversmith at the same time. Silver and plated ware come from several factories in Wurtemberg. Berlin is also an important place for the manufacture of the goods under consideration.

Relative to the outlook for American ware, Mr. Gumpert says that so far our manufacturers have not taken sufficient care to adapt their products to the wants of the German market. If they wish to be really successful let them send over reliable men who can speak German and understand their trade thoroughly. Let them make a careful study of the German market, so that on returning home they can give useful advice as to what articles and what styles and finish are required. American silverware has a brighter look than the German product, a fact which is frankly admitted over there by those who know American silver and which will certainly be a help to our manufacturers in their efforts to gain a firm footing in the German market.

Preston: 1 package gold leaf, $490.

Rotterdam: 2 packages cutlery, $300.

Siam: 22 packages clocks, $378.

Sheeld: 6 packages glass ware, $80.

Southampton: 2 packages optical goods, $210; 1 package cutlery, $15; 1 package cutlery, $42; 1 package clocks, $125.

Stockholm: 10 packages silver foil, $268; 1 package plated ware, $112; 1 package silverware, $75.

San Domingo: 13 packages glass ware, $17; 2 packages cutlery, $17.

St. Petersburg: 1 package cutlery, $53.

Uruguay: 1 package jewelry, $36; 33 packages glass ware, $406; 2 packages plated ware, $160; 2 packages clocks, $16.

Venezuela: 16 packages glass ware, $111; 1 package cutlery, $17; 2 packages silverware, $101.

Leonard Cornelius Elected Mayor of Prairie du Chien, Wis.

PRAIRIE DU CHIEN, Wis., April 15.—Leonard Cornelius, the proprietor of the store known as The Jewel Casket, has been elected mayor of Prairie du Chien on the Democratic ticket after a hot fight.

The nomination for mayor came to Mr. Cornelius unsolicited and as a recognition of his fitness for the office. It was first believed that the Republicans would support him, but later that party put up a nominee.

Mr. Cornelius is well known in the jewelry trade in this vicinity and is watch inspector for the C. M. & St. P. R. R. He has been receiving the congratulations of his friends upon the honor which fellow-citizens have paid him.

Jewelry May Not Be Purchased in New Jersey From Children Under 15 Years.

TRENTON, N. J., April 15.—Jewelry and metal can no longer be purchased within this State from any minor under the age of 15 years, Governor Murphy having signed a bill making this a misdemeanor. The full text of the sections of the act which apply to the jewelry trade were recently published in THE CIRCULAR-WEEKLY.

The bill is intended to take away the inducements to children to commit small thefts by making it impossible for them to sell their booty.

Death of H. B. Knoff.

DECATUR, Ill., April 15.—H. B. Knoff, a well-known citizen of this town who died at his home in W. Adams St. Monday morning, was at one time in the jewelry business in Decatur.

Mr. Knoff was 63 years old and was a native of Ohio. After engaging in various lines he became a partner with M. F. Elzey and the two conducted a jewelry store here early in the 70s. In 1875 Mr. Knoff left Decatur, but returned in 1888, since which time he has remained in this city. The funeral was held this morning from the Methodist Episcopal Church.

W. H. Linford, president of the International Cut Glass Co., is negotiating for the establishment of a cut glass factory in Salamanca, N. Y.

The Bostwick Bill.

Law Against False Marking of Gold Passes New York Assembly and Goes to the Senate.

The bill prohibiting fraudulent marking of articles of gold which was introduced into the Assembly by Assemblyman Bostwick, of New York, about three weeks ago, passed the Assembly Wednesday. It was immediately sent up to the Senate and was referred by that body to the Committee on Codes. This committee reported favorably on the bill to the Senate Friday, and it has now gone before the Senate for passage.

The full text of the bill was published in THE CIRCULAR-WEEKLY April 1. In accordance with the suggestion contained in THE CIRCULAR-WEEKLY at that time, a great number of letters in favor of the bill have been written by jewelers all over the State and sent to members of the Legislature. More than 100 such letters from the most prominent houses in the trade have been received by the chairman of the Codes Committee of the Senate, and thus far the bill seems to be so favorably regarded, both in the Senate and the Assembly, that its passage seems assured.

What little opposition to the bill was manifested in the Assembly was led by Assemblyman Isidore Cohn, who represents a number of East Side instalment dealers. This opposition was not very strenuous, however; it seems now to have died out almost completely.

ALBANY, N. Y., April 18.—Assemblyman Edward Rosenstein's bill to amend the Penal Code, in relation to the stamping or marking of plated jewelry so as to distinguish genuine articles from imitations, will not be passed this year. Mr. Rosenstein delayed too long in bringing his bill out of the committee, consequently it did not receive favorable consideration.

Mr. Rosenstein's colleagues, it is said, thought well of the bill, and if it had been brought out of the committee in time it probably would have been passed with little or no opposition. The defeat of the bill is not only a disappointment to the introducer, but to a number of jewelers throughout the State, who approved of the measure.

Mr. Rosenstein, in conversation with a representative of THE CIRCULAR-WEEKLY, said: "Upon my return to the Assembly next year, my first act will be to introduce a bill similar in every way to the one that was before the House this year. I will urge its passage without delay and have a law placed on the statute books that is demanded by every fair-minded citizen of the State."

Chances Bright for the Enactment of the Proposed Michigan Stamping Law.

LANSING, Mich., April 15.—The Duncan bill requiring that all jewelry made of gold and silver, or imitation of these metals, shall be marked in a way to show the metals of which they are composed, has passed the Senate after a hard fight.

After the bill in its original form had passed the House it went to the Senate, where it was first favorably considered, but it was later held up on the protest of a number of department store proprietors and others. To meet some objections it was amended so that it would permit certain articles on which a stamp had not been placed to have tags attached to them showing the actual composition of the article, and the clause making it compulsory to have the manufacturer's name stamped on the goods was also omitted. After making these and other minor amendments which were agreed to between the introducer and the opponents the bill finally came up for consideration.

In the Committee of the Whole an attempt was made to strike out the penalty clause but this was unsuccessful. Senator Scripps spoke against the bill, reading letters from prominent houses who opposed it. Senator Kelley defended the measure and read a letter from the Michigan Retail Jewelers' Association saying that the bill had the unanimous endorsement of the members of this society.

Unless the opponents of the bill succeed in bringing strong influence to bear on the Governor the chances of the bill becoming a law appear to be bright.

Albert Norstedt Seriously Injured by Falling From a Window.

MT. CARMEL, Pa., April 15.—Albert Norstedt, a jeweler, of S. Oak St., this city, is confined to his home suffering from injuries sustained by a fall. Some time Monday night Mr. Norstedt fell from the second story window of his home to the ground below.

About three o'clock yesterday morning Mrs. Norstedt heard groans outside the house, and with her son Albert made an investigation which resulted in discovering Mr. Norstedt lying beneath the window from which he had fallen. He was carried into the house and a physician sent for. It was then discovered that he had broken a rib and severely bruised his body, but his injuries are not thought to be fatal.

How the accident occurred has not yet been learned because Mr. Norstedt has not been in a condition to give any details, but it is supposed that in leaning out of the window he lost his balance.

Courvoisier, Wilcox Mfg. Co.

Morgan Silver Plate Co. Obtains Judgment Against Former Salesman.

READING, Pa., April 15.—The suit of the Morgan Silver Plate Co., Winsted, Conn., against Henry Donehower, of this city, was tried Monday before Judge Endlich and resulted in a verdict for $397.41 in favor of the plaintiff.

It was claimed by the silver company that on Jan. 1, 1901, Donehower entered into a contract to become the salesman for one year, for which he was to receive $100 a month, expenses and 20 per cent. commission. About March 11, 1901, he resigned after drawing $485, and the company contended that the aggregate amount of sales up to that time was $692.67, and that under the contract he was entitled to but $130.17. The company sued for the difference with interest.

Mr. Donehower submitted no defense, though the suit was contested by his attorneys, and the jury rendered a verdict to the amount above mentioned.

Amendment to Myers Pearl Mussel Law Passed by Arkansas Legislature.

LITTLE ROCK, Ark., April 15.—There is much satisfaction in pearl fishing centers over the passage of the amendment to the Myers Pearl Bill which recently became a law.

The original act, which was intended to protect the fisheries of the State by establishing a close season, and forbidding pearl mussels to be gathered by steam dredges and in other ways, caused a storm of protests, and the author, Mr. Myers, then introduced an amendment which permits the use of the crowfoot in water over seven feet in depth and the use of dredges in water over 10 feet in depth.

This bill has been passed by the Legislature, and it is now expected that a number of button factories will be established within the State.

M. D. Jackson Files a Voluntary Petition in Bankruptcy.

BURLINGTON, Vt., April 15.—The friends of M. D. Jackson, a jeweler at Bellows Falls, were surprised to learn this week that he had filed a petition in bankruptcy Saturday in the United States Court. According to the schedules filed with the petition the liabilities amount to $1,099.66 and the assets, $1,230. Of the latter, chattels, $390 are claimed to be exempt.

Mr. Jackson has been in business in Bellows Falls for many years, but not continuously. After being out of business for three years, he started again in 1897, and has continued ever since.

Trustees in Bankruptcy to Sell the Stock of Brown & Willis.

FITCHBURG, Mass., April 15.—An attempt is now being made by the trustee of the jewelry firm of Brown & Willis, jewelers, at 193 Main St., to sell the assets of the concern at private sale.

When the concern went into bankruptcy there was a mortgage on the debtors' goods to the amount of $3,500, which the trustee in bankruptcy decided to contest. An agreement, however, has been reached between the mortgagee and trustee to the effect that the stock and fixtures may be sold and the proceeds held to await the determination of the proceedings to test the validity of the mortgage.

The stock and fixtures were appraised at $4,200, and bids ranging up to $2,600 have already been received. It is hoped that some of the creditors will arrange to buy this stock at a proper figure.

Frank Conway, formerly engaged in business in Young America, Ind., is reported to have eloped with a young woman of that place. Conway is a married man with a family, and he is being anxiously sought by his friends.

Desperate Thief Attacks Jeweler's Clerk With Sandbag and Tries to Rob Him.

CINCINNATI, O., April 20.—A sensational attempt to rob a jeweler, which came near ending in the murder of the victim, took place late last week at the Burnet House, in this city, and the robber was thwarted only by the unusual endurance, strength and presence of mind of his intended victim.

A young man, well dressed, called at the store of Geo. H. Newstedt, 404 Walnut St., and after looking at some diamond rings selected one valuable piece on which he paid $4 deposit and asked to have it sent over to his hotel at about 4 P. M. The salesman who waited upon him, Edward Lovell, took the ring over at the time mentioned.

Here he was shown to a room in the Burnet House, where he was met by his customer and asked to sit down. After asking many questions about the stone the young man told Lovell he would take it, and mentioned that he must get the money from a wardrobe behind where the clerk was sitting.

Suddenly as the man stood up Lovell felt a blow and discovered that he had been knocked on the head with a sandbag and was cut badly above his eye. The clerk quickly realizing an attack had been made upon him grabbed his assailant and both went to the floor in a scrimmage that ensued.

Mr. Lovell by this time was blinded by the blood from the cut and dazed by the blow, but being an athlete was able to grab his assailant by the throat. The robber also pulled a revolver which Lovell caught in time to escape being shot, and was able to hold his man until other people in the hotel, attracted by the noise, had come to his assistance.

The thief was taken into custody and later made a full confession. The man says his name is Sullivan and that he had become pressed for money matters and came from Muncie, Ind., to Cincinnati purposely to rob some jeweler of enough to help him out of his difficulties. The thief said he is 20 years old and is a cigar salesman by trade. When arrested a bottle of chloroform was found in his pocket.

The jewelers of Augusta, Ga., announce that they will close their stores at 6 P. M., Saturdays excepted, from April 13 to Sept. 15.

Thief Smashes Show Window, and Escapes With Many Gold Rings.

BALTIMORE, Md., April 18.—A bold robbery was committed at the store of Carl A. Boucsein, 1039 N. Gay St., last Tuesday evening by some one yet unknown to the police. The thief took advantage of the deserted condition of the streets during the heavy rain storm at that time, and smashed a large front window and escaped with a tray of 64 rings valued at $200.

The jeweler's wife was sitting in the rear of the store when the theft is believed to have occurred, but owing to the noise caused by the heavy storm, did not hear the crash of glass. A messenger boy ran into the store and notified her that the window was broken. Upon investigating, she saw immediately that a tray of rings was gone.

A description of the missing articles was sent to the police, and included 36 plain gold wedding rings, 2 to 2½ dwts., sizes 4½ to 8; 28 chased band rings of different designs and sizes. The window was smashed near the bottom, the pieces of glass being knocked inside.

Store of M. F. De Myer, Fulton, Ky., Robbed of Fifteen Watches.

FULTON, Ky., April 15.—At an early hour this morning the jewelry store of M. F. De Myer in the Citizens' National Bank building was broken into by burglars and 15 gold watches were stolen. The thieves effected an entrance by smashing one of the large front windows and then hurriedly grabbing watches valued at about $250 escaped.

This afternoon Sheriff Dunpal arrested at Dyersburg two negro boys, who were charged with another crime, but when taken into custody several of the watches belonging to Mr. De Myer were found in their possession. The boys claimed to have found the watches near Rives Station, but the authorities believed that they committed the robbery themselves. An attempt will be made to bring the boys to Fulton to answer to the charge of burglary.

In addition to the members of the firm of the White-Haines Optical Co., Columbus, O., who are mmebers of the Ohio Optical Association, this house was represented at the convention by John M. Bonnes, one of their traveling representatives.

Fight Over Smuggled Jewels.

Trial of Suit To Forfeit Diamonds Worth $27,000 Seized from Michael Leinkram.

The action *in rem* in which the United States is seeking to condemn by forfeiture about $27,000 worth of diamonds seized Feb. 23, 1902, from Michael "Leinkram," was begun in the United States District Court at New York Thursday before Judge Holt and a jury.

The diamonds were taken from "Leinkram" (whose real name is said to be Hochberger) as he was leaving the *Kronprinz Wilhelm*, after having made a declaration in which he failed to mention the goods. They were found in a belt made of flannel which contained pockets in which the diamonds were secreted and which was wound about "Leinkram's" body next to his person. "Leinkram" was arrested, indicted and on May 16 was convicted of diamond smuggling. He is now serving his sentence.

In the action begun Thursday to condemn the diamonds a claim to the goods was set up by William Goldwasser, of Antwerp, on the ground that they are his property and were obtained from him on memorandum by one Josef Zinner, of Antwerp, who subsequently transferred them to "Leinkram."

Mr. Goldwasser's attempt to get possession of the diamonds on the grounds above mentioned was begun last year when he filed a petition in the United States District Court asking for a remission of the forfeiture of the goods. Hearings on these remission proceedings were held during April and May of last year before United States Commissioner Alexander, and the record was sent to the Secretary of the Treasury, who refused to grant the petition.

Mr. Goldwasser had previously set up his claim in the suit by the Government in the United States District Court at New York, and this was practically the only issue to be determined when the trial began. Assistant United States District Attorney Baldwin appeared for the Government and Abram J. Rose and Peter Zucker appeared as counsel for Goldwasser.

On the opening of the case Mr. Baldwin moved for a judgment on the pleadings of the claimant on the ground that they were insufficient as to detail; that they contained only general denials of important facts, and that the whole theory of the case was that it was against the goods and not against the claimant, and that the claimant had no standing in court. The Court interrupted Mr. Baldwin at this time to ask him if he thought a thief who smuggled in goods could forfeit them, and if he believed that the real owner could lose goods that were smuggled and forfeited because a thief had stolen them. Mr. Baldwin said that the intent of any person other than the person who brought them in was immaterial to the Government. The action, he said, was against the goods, not against the owner. He said that in a similar case the Supreme Court had held that the goods must be forfeited.

In replying to Mr. Baldwin's motion, Mr. Rose said that it should not be granted. The real owner of the stones, he said, had done no act that rightly allowed the Government to keep them. He said that he wanted an opportunity to prove the real owner's title to the stones. The original purchaser, he said, had no title to the goods after he had violated the language of the memorandum on which they were obtained, and that when these goods had not been returned to Goldwasser after the time specified in the memorandum, they were as much stolen property as though Zinner had broken into his store at dead of night and stolen them.

Judge Holt overruled the Assistant District Attorney's motion and ordered that the action proceed before a regular jury.

A large part of Thursday afternoon was taken up in the examination of the Government's witnesses to show that the diamonds had been smuggled by "Leinkram." The witnesses who testified were Deputy Collector Jas. R. Dougherty, Inspector Herbert, who examined "Leinkram's" baggage; Special Treasury Agent Theobold, who explained in detail the finding of the diamonds in a belt around "Leinkram's" person and his subsequent arrest, and General Mindil, the examiner of precious stones for the port of New York, who testified that the foreign value of the diamonds was $24,957.16, and that the home value, including the duty, was $27,452.88. After proving these facts and submitting them as evidence the Government rested its case.

Mr. Rose then moved to have the Court charge the jury to bring a verdict in favor of the complainants, upon the ground that the goods had not been smuggled into the United States by "Leinkram," as "Leinkram" had not left the dock and was not without the jurisdiction of the customs officials when they were taken away from him by Theobold. The Court overruled this motion.

Mr. Goldwasser was then called to the stand by Mr. Rose and testified that Zinner came to him on the 10th of February, 1902, and obtained goods from him, valued at about 100,000 francs, on memorandum to take to Berlin, where he had a prospective customer. Three days later Goldwasser sailed for New York. On the next day after his arrival in New York he read in the newspapers of the arrest of "Leinkram" and the description of the diamonds found on him. At the same time he received a cablegram from his wife, stating that Zinner had left for America with the diamonds and that he should hurry home to protect himself. Acting on this information Mr. Goldwasser said he called upon Sol Levy, an attorney in New York, and told him that he had reason to believe that the diamonds that were seized were his, and that he would like to go to the Appraiser's stores and see them. Accordingly Mr. Levy and Mr. Goldwasser visited the Appraiser's stores and the latter found that the seized stones were the same that he had given to Zinner on memorandum in Antwerp. After remaining in New York a few days he returned to Antwerp. Early in April he again returned to New York for the purpose of testifying at the remission proceedings before Commissioner Alexander.

At this point the Assistant District Attorney took the witness and put him under a sharp cross-examination. He brought out the fact that on Feb. 10, 1902, when Gold-

wasser had given the goods to Zinner on memorandum, he had but 200,000 francs worth of diamonds all told, and that he gave Zinner more than half of his stock. The Court then adjourned.

Part of Friday morning was consumed by a minute examination of the seized diamonds by Goldwasser, who was again put on the stand. Mr. Rose sought in this manner to prove to the jury his client's familiarity with marks on the packages, quality of the stones, etc. The witness in answer to the question as to whether or not there was any other handwriting besides his own and Zinner's on the packages said that there was the handwriting of Herr der Metz, an Antwerp diamond broker, who had had the diamonds previous to Zinner. When Mr. Rose asked the witness if he could tell whether or not the stones which he had examined in the Appraiser's stores in New York were the same ones which he had delivered to Zinner, Mr. Baldwin objected on the ground that they had been out of the witness's hands too long, and that since they had left his possession many different marks had been put upon the packages. The Court sustained this objection.

Then Mr. Rose attempted to prove that the stones were from Antwerp. He brought out the fact that the stones had an Antwerp cut, and that the stones examined at the Appraiser's stores also had an Antwerp cut. Mr. Rose ultimately proved quite conclusively that the witness had an intimate knowledge of the character and quality of the stones. He then tried to prove that there was no conspiracy between Goldwasser, Zinner and "Leinkram." The witness said that he did not know "Leinkram" and had never seen him.

The witness said that his coming to New York had nothing to do with the diamonds he had given to Zinner. Up to that time, the witness said that he had heard nothing from or concerning Zinner. Mr. Rose then produced the cablegram that Goldwasser received from his wife which read: "Protect yourself. Return quick. Zinner left with goods for America." This cablegram was in cipher and the code book was produced in court and the witness compelled on the stand to interpret the message from it.

The Assistant District Attorney repeatedly objected to this line of testimony, but was overruled by the Court throughout. Mr. Baldwin in one of his objections declared that the code book could have been made up since the seizure of the goods and made to answer this purpose.

Mr. Rose then brought out the fact from the witness that the code had been in use between Goldwasser and his brother, Gustave Goldwasser, a diamond merchant at 37 Maiden Lane, New York, ever since Gustave Goldwasser had been in business in America. The witness declared that the code had been arranged between him and his brother before his brother left Antwerp to go into business in New York. This code book was then admitted in evidence.

The claimant's counsel then showed through his witness that the diamonds were not suitable for the New York market; that even if Goldwasser had been in conspiracy with Zinner and "Leinkram" for the purpose of smuggling these goods into America he would not have chosen that quality for the purpose.

Mr. Baldwin raised strenuous objections to this line of testimony on the ground that the witness was not competent. He was overruled, however, by the Court and the witness proceeded. He said that they were not suitable for the New York market because they were a poor class of goods and only suitable for Germany, France, Italy and Russia. The United States, he said, required a better quality of stones.

Mr. Rose then surrendered his witness to the Government, and Mr. Baldwin put him through a severe cross-fire of questions. He showed that a man by the name of Isidor Hochberger was a diamond broker in New York, and that "Leinkram," alias Hochberger, was his brother. He then showed that Zinner was brother-in-law of Goldwasser. He brought out the fact that Zinner was a man of small financial stand-

ing in Antwerp and that Goldwasser had given him more than half of his stock on memorandum.

Mr. Baldwin also brought out the fact that Goldwasser had taken no steps to cause Zinner's arrest after he had known where he was. He made the witness admit that he had not attempted to punish Zinner in any way, and did not even now know where he was. The witness also admitted that he took no interest in Zinner and did not know whether he had ever returned to Antwerp or not. Furthermore, he had not watched for his return and knew nothing about his family or how it was supported.

At this point the Court adjourned until yesterday morning.

When the case came up yesterday morning four witnesses were put on the stand, two by the Government and two by the claimants. After the examination of these witnesses Assistant District Attorney Baldwin moved for the Court to direct the jury to find a verdict in favor of the Government. This motion was opposed by Mr. Rose, and a long debate between the two attorneys followed. Eventually, Mr. Rose secured permission from the Court to have the case adjourned until to-morrow so that he could obtain a writ of habeas corpus for Michael "Leinkram," who is now in Elmira Reformatory, and have him appear and testify.

A more complete account of yesterday's proceedings will appear in the next issue of THE CIRCULAR-WEEKLY.

Bill Forbidding Body Executions in Small Instalment Suits Signed by Governor Odell.

Gov. Odell Wednesday affixed his signature to the bill introduced by Senator Elsberg, which had passed both houses of the Legislature and provides that no body execution shall be issued against a person in an action for conversion of goods purchased by instalments where the amount in dispute is less than $100.

This is the third year that the bill, or one similar to it, has been before the New York Legislature, but each year it has been defeated by the Jewelers' Mutual Protective Association. This year this association was not active in its opposition.

The constitutionality of the law recently passed by the New York Legislature exempting from arrest debtors in instalment cases, when the indebtedness is less than $100, was sustained Monday by Justice Blanchard in Special Term, Part II, of the Supreme Court of New York.

The specific case which came before him was that of Guiseppe Arena, who had been arrested at the instance of an instalment jeweler for a balance of $66 alleged to be due on purchases. "I do not think," said the Justice, "that chapter 156 of the laws of 1903, which deprives a party of his remedy of a body execution upon a judgment which he had secured against the debtor prior to the enactment of the law, is unconstitutional."

In other words, the Judge's decision is to the effect that all those proceedings for body executions in actions for less than $100, which had been begun prior to the enactment of the present law governing such cases, cannot be enforced.

"Ehrlich Waehrt am Laengsten."

WHITE HCUSE,
Washington, Feb 28, 1902.

Gentlemen: I return herewith the chain bracelet, and regret to say that in view cf the innumerable requests received for permission to name various articles after Miss Roosevelt, she has had to make it an invariable rule not to consent to the use of her name in any case.

Thanking you for your courtesy, I am,
Very truly yours,
(Signed) WM. LOEB, JR.
Assistant Secretary
to the President.

J. J. Sommer & Co.,
N. Attleboro, Mass.

THE NEW LAW.

AN ACT TO PREVENT THE UNAUTHORIZED USE OF THE NAME OR PICTURE OF ANY PERSON FOR THE PURPOSES OF TRADE.

The People of the State of New York, represented in Senate and Assembly, do enact as follows.

Section 1. A person, firm or corporation that uses for advertising purposes, or for the purposes of trade, the name, portrait or picture of any living person without the written consent of such person first obtained is guilty of a misdemeanor.

Sec. 2. Any person whose name, portrait or picture is used within this State for advertising purposes or for the purposes of trade without his written consent first obtained may maintain an equitable action in the Supreme Court of this State against the person, firm or corporation so using his name, portrait or picture, to prevent and restrain the use thereof; and may also sue and recover damages for any injuries sustained by reason of such use, and if the defendant shall have knowingly used such person's name, portrait, or picture in such manner as is forbidden or declared to be unlawful by this act, the jury, in its discretion, may award exemplary damages.

Sec. 3. This act shall take effect Sept. 1, 1903.

We DID NOT *call our Bracelet after Miss Alice Roosevelt but—all call it the handsomest and best.*

J. J. SOMMER & CO.,

ESTABLISHED 1877.

Manufacturing Jewelers, NORTH ATTLEBORO, MASS.
N. Y. Office, 180 B'way. Samples only.
"An Equivalent for Value Received" is our motto.

Providence.

TRADE CONDITIONS.

Business is rather quiet in some lines, although the present month this year has not been as slow as have corresponding months in past years, and this is looked upon as an encouraging sign. Among the retailers the demand occasioned by Easter has ceased and only the regular volume of trade can now be depended upon. It is reported that the Easter buying this year was considerably more extensive than in years past.

Edward B. Hough, of the Wightman & Hough Co., has sailed from Boston on a brief trip to England.

The victorious Dover team of bowlers in the Manufacturers' tournament has arranged a game with the American Electrical Works team for this week.

The Tilford Mfg. Co. is a new concern at 185 Eddy St., manufacturing 14kt. jewelry. George A. Keach is the president and Geo. H. Tilford the treasurer. The latter was for 11 years with J. C. Wolstenholme.

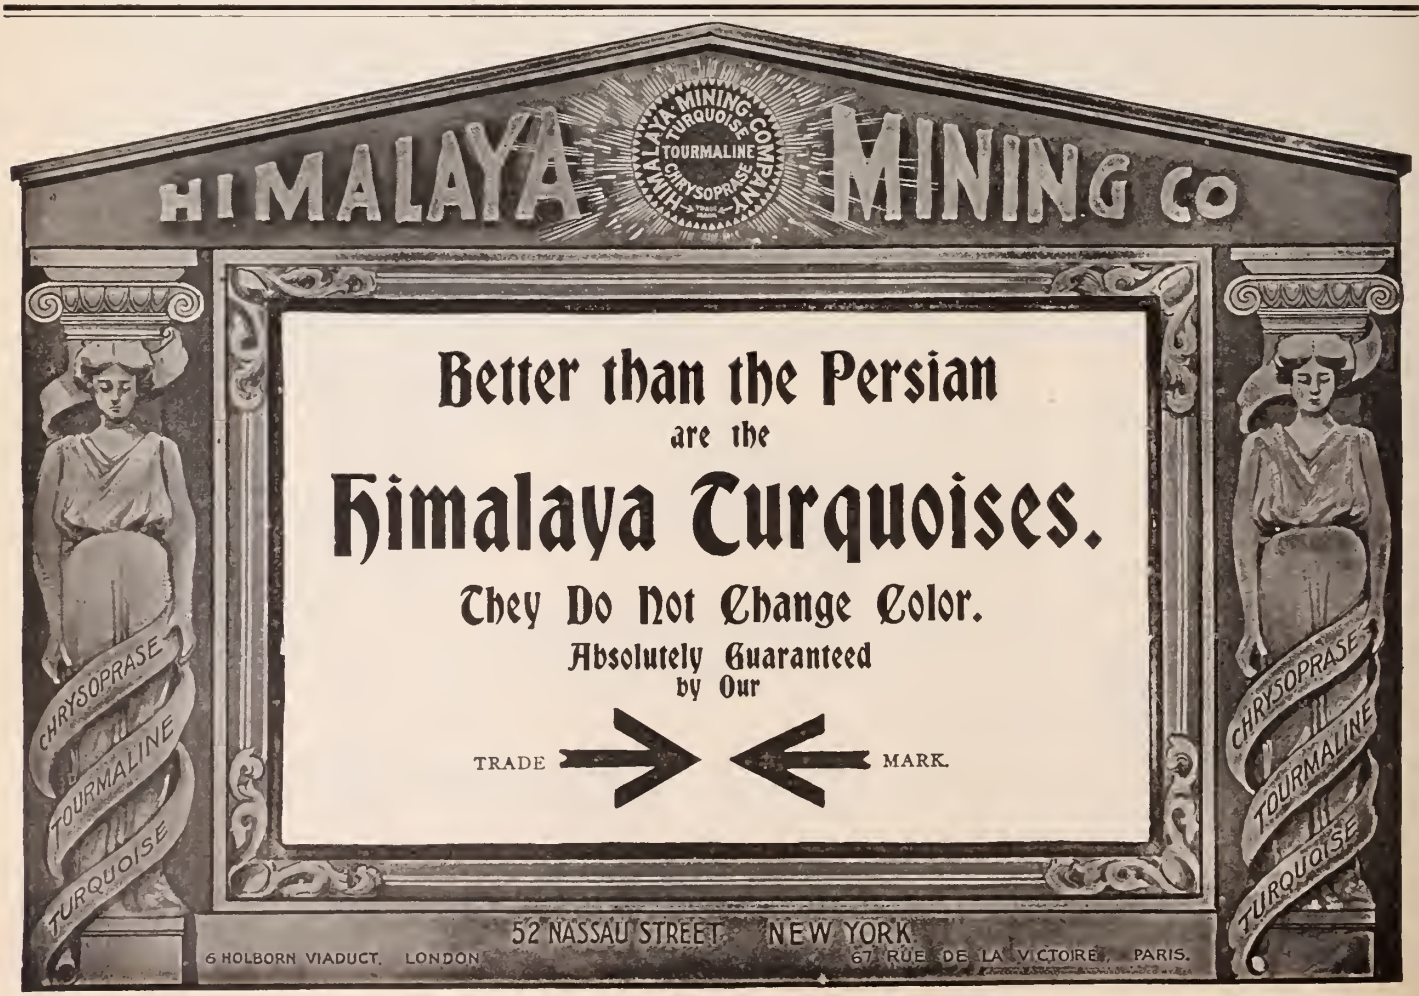
The list of imports at the port of Providence last week included one package of clock movements from Liverpool, one package of precious stones from Havre, one package of precious stones and three packages of glass stones from Bremen.

The partnership heretofore existing between William H. Shackleford and Eugene E. Thomas, Jr., who had been doing a mail order business as the Eastern Mfg. Co., has been dissolved. The concern had offices in the Banigan building.

Chester W. Kelley, 144 Westminster St., who a short time ago made an assignment to A. P. Sumner for the benefit of his creditors, has filed a voluntary petition in bankruptcy in the United States Court. He was adjudged to be a bankrupt and his case was assigned to Referee in Bankruptcy Chester W. Barrows. He places his liabilities at $3,790 and has no assets, although a dividend of 33 1/3 per cent. has already been declared by the assignee. The assignment was made Dec. 30, 1901.

That additional buildings equipped with up-to-date appliances for small shops were in demand here has long been recognized. It seems possible now that two buildings to be devoted to the use of jewelers will be erected in the near future. One will be located at the corner of Chestnut and Clifford Sts. The property was sold Saturday to Charles F. Irons, of the firm of Irons & Russell. The property covers 75 feet on Chestnut St. and 140 on Clifford St. The price paid was $12,000. The other building will be located on the corner of Elm and Blount Sts. It will be of brick and wood, and will have 148 feet on one street and 125 on the other. It will be five stories high and will have a width of over 40 feet. Work on the building has already been commenced and it is expected that it will be completed some time in July. This factory will also be fitted up for jewelry purposes.

Probably no greater mark of respect and esteem has ever been paid any member of the Legislature than that bestowed upon Joseph P. Burlingame, of J. P. Burlingame & Co., manufacturers of jewelers' findings, who is also Speaker of the House of Representatives. This has been a particularly unruly General Assembly, and although the Republicans, of whom Mr. Burlingame is one, had a majority in the House there were enough Democrats to make things interesting. It was suggested toward the close of the last week of the legislative session that a portrait of the Speaker be painted and hung in the State House. This suggestion came from a Democrat and was seconded by a Democrat. In the course of the ensuing remarks, Democrats and Republicans alike expressed their appreciation of the manner in which the Speaker had presided over the body. It was voted that his picture be painted, and an appropriation was made to defray the expenses of the same.



Plainville.

William S. Metcalf, of the Plainville Stock Co., has gone on a western trip.

Frank Maintien, who recently cut his hand severely, is recovering rapidly, although he will not be able to use his hand for some time.

Fred. T. Doland, a pattern-maker for Maintien Bros. & Elliott, lost his life last week by drowning in Whiting's pond. It is believed that he was taken with a fit and fell into the water. He was one of the best pattern-makers in this part of the country. He leaves a widow and six children.

Frank A. Brown, an employe of Whiting & Davis, has received a dispatch from Sydney, Cape Breton, stating that the appeal in the case of Brown *vs.* Dooley had been

denied, and the original decision in his favor had been sustained. This means that he with a brother and sister will divide $30,000. The property was the celebrated Ormond estate.

North Attleboro.

TRADE CONDITIONS.

Business in North Attleboro is about as usual at this season of the year. About half of the shops are running on short time. The salesmen will go out next month.

Fred S. Gilbert spent a few days in New York last week.

Fred B. Brigham, salesman for Cheever, Tweedy & Co., is now in town, but will start out again next month.

Henry F. Barrows, of H. F. Barrows & Co., has returned from New York, where he has been spending the Winter.

John P. Bonnett will close his coloring plant from May 16 to May 25 for the annual repairs to engine and boilers.

The Paye & Baker Mfg. Co. has under consideration the construction of a large addition to its factory on Richards Ave.

Herbert Robinson, son of Eugene Robinson, of Robinson Bros., has been obliged to go to a sanatorium for rest and improvement.

Louis A. Blackinton, of the W. & S. Blackinton Co., has leased an estate at the cor. of Brook and Waterman Sts., Providence, R. I.

A. Frank Waite, salesman for the Webster Co., has the sympathy of many friends in the death of his mother, who passed away while on a visit to him.

R. Blackinton & Co. are in need of more room for their increased business, and A. H. Bliss & Co. have under consideration the construction of a large addition to the Whitney building, of which R. Blackinton & Co. are tenants.

The town committee on the celebration of the Fourth of July has organized for business. Harry W. Tufts, of the H. W. Tufts Tool Co., is chairman, and George G. Wheeler, of THE CIRCULAR-WEEKLY, is clerk. John E. Tweedy, of Cheever, Tweedy & Co., is a committee of one on music.

A 12-inch emery wheel burst in the pearl shop of the T. I. Smith Co., last week, scattering the flying fragments in all directions. One piece struck Antonio Dargis on the head, inflicting a scalp wound, and slight contusions on the arms and wrists. Wilfred Hamael was struck on the nose, breaking that organ and laying it open. Dr. E. S. Ward was summoned, and dressed the wounds of the injured men.

The firm of T. G. Frothingham & Co. was dissolved Friday by mutual consent, William E. Smith retiring. Thomas G. Frothingham will carry on the business under the old style. The firm was founded 22 years ago by the same men who have conducted the business, as partners, until the present time. Both were "graduates" of the shop of Smith & Ginnido, the pioneer gold concern of the town, later C. E. Smith & Co., Bugbee & Niles, and now the Bugbee & Niles Co. They started in business in the top story of the Draper building, and later removed to more commodious quarters in the rear of the same building. Here they stayed until the memorable fire of July

25, 1901, which totally destroyed the factory. The firm later opened new quarters in the company's shops in the Fall of 1901. Mr. Smith will not re-enter business if his friends know his intentions correctly. Mr. Frothingham, when seen by a CIRCULAR-WEEKLY reporter, stated that the business would not undergo any change.

A number of local jewelers spent Lexington day at the Golden Ball, Wenaumt, on Cape Cod. Among them were Arthur Peckham, of the T. I. Smith Co.; Frank Holbrook, of R. Blackinton & Co.; Alpin Chisholm, of the Bugbee & Niles Co.; O. W. Clifford, of the Webster Co., and James P. Black.

Attleboro.

Frank W. Weaver, of F. W. Weaver & Co., left last week for a pleasure trip through the south.

Fred S. Johnston, salesman for J. M. Fisher & Co., is off duty for two weeks, and is seeking rest and recovery of health camping at Rochester, Mass.

Anthony H. Bliss, of A. H. Bliss & Co., North Attleboro, will sell at auction April 24 a part of the plant of the Teed, Crandall Co., of this town, to satisfy a mortgage. Last week David E. Makepeace, of the D. E. Makepeace Co., sold a part of it by the same process.

Sidney O. Bigney, of S. O. Bigney & Co., voiced accurately the feelings of his colleagues on the Tariff Committee of the Attleboros when he declared that the National Manufacturers' Association had no place in its activities for tariff tinkering. When a speaker, Charles Norman Fay, of Chicago, tried at the convention in New Orleans last week to pledge the Association for tariff revision, Mr. Bigney emphatically opposed him and defeated the movement. Mr. Bigney went to the convention to enlist its aid against the proposed increase of duties to be placed on American products by Canada. He has come to believe however that the movement there is doomed to failure even without the American campaign of education which was planned.

An indignation meeting was held last week in Chartley at the call of William A. Sturdy, proprietor of W. A. Sturdy & Co., jewelry manufacturers. It was responded to despite one of the heaviest storms of the season by scores of the men employed in the group of jewelry shops in the village. Inflammatory speeches were made, and it was proven to the satisfaction of the speakers and listeners that the town of Norton discriminates against her jewelry suburb. Norton is characterized by an exclusive, rurally quiet and highly intellectual atmosphere, her chief industry being a large seminary. The intrusion of the jewelry shops over the border from Attleboro was resented and friction has been apparent for a quarter of a century. This meeting was to protest especially against alleged unfairness in school administration, and a general disposition on the part of the town to ill-treat the jewelry section. The suggestion was freely made that a continuance of the policy would result in an appeal to the next Legislature for annexation to Attleboro, which is of kindred industry and kindred town spirit. A special town meeting was demanded by the irate jewelers. Representatives of the firms

of Freeman, Daughaday & Co., W. A. Sturdy & Co., and Sturdy Bros. were present and openly endorsed the words and plans of their men. A recent act of the Legislature has done one good thing for Chartley's jewelers. After being several miles from good transportation facilities they now have them right in their midst. The Legislature has given permission to all electric railway companies to carry freight and express as common carriers, a privilege never before allowed, and the road which passed through the shop district has given greatly improved service the last 10 days to the manufacturers.

Syracuse.

S. L. Harding, Camden, and R. Perlen, Utica, were among the out-of-town buyers in Syracuse last week.

Otto Stadelman, for 11 years watchmaker for Irvine Duncan, 125 W. Fayette St., has engaged in the same capacity with Calvin S. Ball.

George T. Jack has been elected a warden of Grace Episcopal Church, and W. Page Hitchcock was made a vestryman of the same church.

G. F. Roy, formerly of Kentucky, and recently a watchmaker with McClelland & Becker, is to be the watchmaker with the new firm of Mead & Co. in the Larned building.

One of the most important developments of the week in Syracuse manufacturing circles was the purchase Saturday of the property situated at the S. E. corner of E. Water St. and University Ave. by the A. G. Finn Silver Co. from Addison H. White. While the consideration is not made public it is known that Mr. White held the property at $15,000. During the Summer the company will remove its plant from 512 and 514 E. Water St. to the new location. In the meantime the company will make extensive improvements on one of the buildings. The new property extends from Water St. to E. Washington St., a distance of 300 feet, and has a frontage of 66 ft.

Rochester.

D. E. Danks has moved his jewelry store from 1 Smith Arcade to 89 E. Main St.

The new factory building of the Lyons Cut Glass Co. is now almost complete and the machinery is ready for installation.

Geo. W. Stevenson, a jeweler of this city, filed a petition in bankruptcy in Utica Thursday. His liabilities are placed by his schedules at $5,007, while no assets are recorded. The largest creditor is Mary E. Outwater, Syracuse, for $5,000.

The Arts and Crafts Exhibition opened Wednesday morning in the Mechanics' Institute. One of the features of the exhibition is the work in metal and jewelry, of which a full description was given in a recent issue of THE CIRCULAR-WEEKLY.

C. J. Schroeder, Manning, Ia., contemplates engaging in business in Hartley, Ia.

The J. W. McCoy Pottery Co., the largest in Roseville, O., was destroyed by fire last Friday morning. The loss is $40,000, one-half of which is covered by insurance. The fire originated in an overheated kiln.

Boston.

Henry Cowan, Jewelers' building, has been out of town for a few days on business.

Mr. Parker, of the Keystone Watch Case Co., visited members of the trade in this city recently.

Sven Nelson, Harvard Sq., Cambridge, has sold out his business to his head clerk, Frank T. Gookin.

E. A. Cowan, 23 Jewelers' building, arrived home last week from a business trip through the south.

Robert Stewart, traveling salesman for the Thomas Long Co., has returned from an extended business trip through New Hampshire and Vermont.

At the regular monthly meeting of the New England Association of Opticians, held at Young's Hotel yesterday, George H. Dears, of Stoughton, was scheduled to deliver a discourse on retinoscopy.

Extensive changes in the way of improvements have recently been made at the store of the Thomas Long Co., 39 Summer St., which have added much to the beauty and convenience of that establishment. Two balconies have been put in on the street floor and a new electric elevator has been installed. The company has also added a new department of fancy French china.

The new quarters of A. Paul & Co. in the annex to the Jewelers' building are rapidly being put in shape, and will be ready for occupancy about May 4. The room is on the first floor front looking out on Washington St., adjoining the quarters of D. C. Percival & Co., and when completely fitted up will be one of the finest jobbing offices in this section of the country. The entire layout of the office has been made with a view to system, and the trimmings and fittings are plain, but in exceedingly good taste. The work was done under the direction of the firm of Charles W. Finlay.

A meeting of the creditors of George A. Collins, Salem, who made an assignment recently, was held in the Quincy House, this city, Friday, about 30 persons being present. It was first believed that the lia-

bilities would amount to about $45,000, but at the meeting Friday it was learned that this was a low estimate and that they would amount to nearly $57,000. Of this amount about $40,000 is not secured. A committee was appointed to thoroughly investigate the case, of which the following are the members: Mr. Patterson, of Smith, Patterson & Co.; A. J. Paul, of A. Paul & Co.; Mr. Murray, of the Jewelers' Association and Board of Trade, and A. G. Barber, of the Globe Optical Co. This committee will report at another meeting to be held April 24.

Buyers in town last week included J. S. Stanley, Wakefield; Edward Moulton, Worcester; L. W. Weston, South Framingham; George H. Willoby, Franklin; J. P. Farrington, Kingston; J. R. Connell, Portsmouth, N. H.; D. J. Sullivan, New Bedford; F. P. Fisk, Epping, N. H.; H. O. Barthelmes, Marlborough; F. R. Hayden, Worcester; H. S. Tanner, Providence, R. I.; George A. Meder, Foxcroft, Me.; W. A. England, Worcester.

Philadelphia.

I. Prell, diamond salesman, has accepted a position with Charles Dean, 715 Sansom St.

Louis Stern, of L. Stern & Co., will sail for Europe April 30, accompanied by his wife and sons.

Harry Murray, diamond salesman at Wanamaker's, is convalescing from typhoid fever at Atlantic City.

Wm. P. Sackett, buyer of Wanamaker's New York and Philadelphia jewelry stores, sails for Europe May 5.

Samuel White, with Ira D. Garman, 101 S. 11th St., was in New York last week on business and pleasure.

It is reported that John Demmert, formerly at 1604 Market St., intends to open a store in Federal St., Camden.

Benjamin F. Krischer, of M. Sickles & Sons, was presented last week by his wife with a charming little daughter.

N. Snellenberg & Co. have been awarded the contract for the prize cups and medals for the Interscholastic League meet.

Mr. and Mrs. O. O. Stillman, New Brunswick, N. J., were the guests last week of Ed. Sickles, of M. Sickles & Sons.

Morton Sickles, son of Sol Sickles, of M. Sickles & Sons, who has been critically ill with typhoid fever, is now convalescent.

L. J. Meyers, gilder and plater, 809 Sansom St., is receiving the felicitations of the trade on a visit of the stork to his home last week.

The store of S. Mellin, 1903 South St., is entirely remodeled and refurnished and made one of the most attractive establishments downtown.

Among the rural retailers in town last week were: Capt. Geo. Bowen, Bridgeton, N. J.; A. M. Kendall, Millville, N. J., and A. E. Lane, Clay, Pa.

Wm. Beck and Ernest Smith, Vineland jewelers, were on the committee which arranged for the big Easter dance of the Crescent Club last week.

C. Willis Bixler, Easton, Pa., has sent cards to the local trade announcing the marriage of his daughter Helen Tombley to Edwin Elliott, of this city.

Jacob Froehlich, diamond broker, 7th St., below Sansom, is one of the incorporators of the Froehlich Rubber Refining Co., which has applied for a charter.

Robert H. Drew, of Parks Bros. & Rogers, while here last week, announced to the trade his approaching wedding. He will spend his honeymoon at Atlantic City.

James Bathgate has resigned his position as buyer of Strawbridge & Clothier's jewelry departments and expects to accept a responsible position with another local house.

Frederick Loos, watchmaker, 726 Chestnut St., has brought suit against the Philadelphia, Baltimore & Washington R. R. Co. for damages for personal injuries received some weeks ago.

Charles I. Clegg, of the fraternity department of Simons, Bro. & Co., has the contract for the prizes to be awarded at the ninth annual relay races of the University of Pennsylvania.

J. Warner Hutchins has been appointed to the reception committee of the banquet to be given by the Union Republican Club to David J. Smyth, the new Director of the Department of Public Safety.

At the adjournment of the Pennsylvania Legislature last week thousands of dollars worth of silverware, clocks, etc., were given away as presents to the members and officers. A magnificent solid silver service made by the Bailey, Banks & Biddle Co. and an ivory and jeweled gavel were presented to John M. Scott, president *pro tem.* of the Senate. Harry Walton, Speaker of the House, was the recipient of a magnificent Elliott hall clock which cost $1,500. Other valuable presents were given. Most of the goods were furnished from local houses.

J. E. Bennett, of the Pollock Jewelry Co., Oklahoma, Okla., has resumed his business duties after having been confined in a hospital with an ocular ailment.

Canada Notes.

W. H. Lively, Ladysmith, B. C., is retiring from business.

The assets of Chas. A. Lapierre, Ottawa, were sold at auction April 16.

Maurice Cochenthaler, Montreal, has issued execution against C. Hollis.

The stock of J. Goulet, Ottawa, was considerably damaged by fire last week.

The creditors are in possession of the assets of Jacob Dover, Nelson, B. C.

B. Stewart, Carberry, Man., has sold his MacGregor branch store to P. Smith.

The Hemming Mfg. Co., manufacturers of jewelry, has been registered in Montreal.

Minnie Zimmerman, clothing and jewelry, Winnipeg, has sold out the clothing business and will continue in the jewelry line.

Abraham Levi, Maurice Bachrack and William Blackley, three Toronto merchants accused of conspiring with George Margolius, Montreal, to defraud his creditors, were brought up before a Montreal Judge last week and pleaded not guilty. They were admitted to bail in heavy bonds.

T. & Joseph Assaly, Montreal, who were acquitted recently in the Court of King's Bench on a charge of defrauding their creditors, were to have appeared last week in the Court of Special Sessions on another charge, but when the case was called they were absent. They are supposed to be in the United States and a bench warrant has been issued for their arrest.

Two young men entered Frank Proctor's store, Toronto, Ont., early in the afternoon of April 15 and asked to look at some watches under the pretense of purchasing. Mr. Proctor placed a case of watches on the counter and turned away to get others. On returning he noticed that one of the watches on the tray was missing and accused the pair of having taken it. They thereupon made a rush for the door dropping the watch in their eagerness to escape. They ran up Yonge St. and Proctor notified the police, who captured them. They proved to be brothers by the names of George and William McDonald, aged respectively 20 and 18 years.

Fred Schmidt, a resident of Montreal for the past 30 years, has left for his old home, Basle, Switzerland, where he will hereafter reside. Mr. Schmidt was one of the most expert watchmakers of the old school, having learned his business with the famous firms of Europe. About 20 years ago he entered the employ of M. Cochenthaler and was continually with this firm until an attack of paralysis obliged him to give up his vocation. In the history of old watches and other matters connected with his craft, Mr. Schmidt was an undoubted authority, and could trace the history of a timepiece by its general appearance as well as most men could by a shelf full of works on the subject.

TRADE CONDITIONS.

The past 30 days have not been productive of a great deal of business for the jewelers. The Lenten season was generally observed and few jewels were bought during that time. Already business is beginning to improve, however. The outlook for the Summer is very bright. This being a manufacturing community the seasons amount to little in the way of affecting trade.

Mr. Schaffer has opened a new store at Decatur.

F. S. Jobson has added a stock of sewing machines to his jewelry line.

A. Speaker, jeweler and optician, has associated with him an expert engraver.

H. C. Abbott & Bro. have made a number of improvements in their handsome store to meet Spring and Summer conditions.

The Calhoun Jewelry Co. has had Preston McNeer held on a charge of embezzlement. No details of the charges are given out further than that a watch was not properly accounted for.

Meyer & Schamber, Meridian, Miss., are now inspectors of watches at Meridian for the Alabama Great Southern, the New Orleans & Northeastern, the Alabama & Vicksburg, the Mobile & Ohio and the Southern railroads.

F. W. Bromberg is fixing up a beautiful way his handsome store in the First National Bank building. He has taken a lease for five years and will make his store one of the most attractive in the south. Mr. Bromberg has become local agent for the Eastman kodak.

Advocating beauty and cleanliness, John T. Adams, Jr., a jeweler of Talladega, led a successful fight to have all the unsightly awnings of his town taken down. R. Heine, another jeweler of that place, is a member of the City Council, and is also interested in the movement.

Swartchild & Co., Chicago, have secured the exclusive agency for the ring-making machine manufactured by the Ringset Co., Boston, Mass. It is claimed for the machine that rings made by it are equal to the best hand-wrought work, in quality and color. With this outfit any desired shape or size of ring can be produced at a few moments' notice.

W. Enos, formerly engaged in the jewelry business in Germany, has set out for Oregon, Ill., where he will have charge of the store of Mrs. W. S. Enos.

Lancaster, Pa.

Z. Batdorff, Tremont, Pa., and Harry Heisfand, Salunga, Pa., have entered the Ezra F. Bowman Technical School, where they will take a course in watchmaking.

Chas. D. Reed, president of the Hamilton Watch Co., recently spent a week at the factory in this city. Henry Colyer, with C. G. Alford & Co., was also a recent visitor to the plant.

Otis Bowers, formerly with Penrose Myers, Gettysburg, Pa., has completed a finishing course in watchmaking and engraving at the Ezra F. Bowman Technical School, and intends going to Nevada, Ia., where he has accepted a position.

Chas. Keim, with Wallace H. Miller, Uniontown, Pa.; D. F. Dubbs, Hanover, Pa.; Mr. Zug, Mastersonville, Pa.; J. H. Sensenig, New Holland, Pa.; S. S. Kaufhold, of Kaufhold & Brubaker, Columbia, Pa., and J. H. Kreider, Denver, Pa., visited the trade in Lancaster last week.

D. Prager & Sons, the new firm style of the business formerly conducted by David Prager, Fort Scott, Kan., have erected a handsome new brass sign in front of their establishment.

ONE OF OUR NEW POPULAR PRICED COFFEE SETS.

Our New York Office and representatives are showing new designs in HOLLOW WARE for the commercial trade. . . . . .

TRADE MARK.

Julius Wodiska Victorious in Cross Suits with Montana Diamond Co.

The suit of the Montana Diamond Co. against Julius Wodiska, a manufacturing jeweler of New York, which has been hanging fire in the City Court of New York for nearly two years, together with the counter action begun by Mr. Wodiska in the Municipal Court against the Montana Diamond Co. were combined in one action Monday and tried before Judge Hascall and a jury in Part II of the City Court.

The suit against Mr. Wodiska was to collect $617.74, an alleged balance on the purchase of 100 shares of stock in the Montana Diamond Co. The counter action against the Montana Diamond Co. was to collect $380.26, which Mr. Wodiska claims the company owed him for mountings it had purchased. The Montana Diamond Co. claimed that Mr. Wodiska took 100 shares of its stock at $10 a share and agreed to allow the company to make payments in goods to that amount. Mr. Wodiska denied the agreement.

When the Montana Diamond Co.'s suit came up before Judge Hascall he notified Wm. B. McNiece, Mr. Wodiska's counsel, that the best thing to do was to have two separate actions settled by one trial. This was accordingly done. Mr. McNiece stated to the court and the jury, in defending his client against the charge of refusing to take the 100 shares of stock ordered, that Mr. Wodiska had never agreed to take any stock of the company. He admitted that $1,000 worth of stock had been sent to his client, but that it had been immediately returned. The plaintiffs, he said, again sent the stock to Mr. Wodiska, which was again returned. He said that the stock had been thus sent back and forth until it was nearly worn out by handling.

In the suit of Wodiska against the Montana Diamond Co. for goods sold and material furnished to the value of $380.26, Mr. McNiece denied that this was in part payment for any stock of the company. He asked not only for the amount in full for his client, but also costs of court, and interest on the amount from the time the action had been brought.

The jury returned a verdict dismissing the suit of the Montana Diamond Co. against Mr. Wodiska and giving Mr. Wodiska a judgment for $418.26 in his counter suit.

Should be able to supply the demand, but an order placed in advance of immediate requirements will be advisable.

Gold Pen Manufacturers Up in Arms Against Amendment to New York Polishing Law.

The Brackett Bill, which positively forbids the employment of females, or males under 18 years of age in polishing and buffing shops where tripoli, rouge and other abrasives are used, but which was amended last week by the committee representing the Manufacturing Jewelers' Association of New York who went to Albany to fight it, so as to exempt jewelers and silversmiths, passed the Senate Friday.

This bill, if allowed to become a law, will greatly affect the gold pen manufacturers of New York State, as the amendment to the bill, which was published in full in the last issue of THE CIRCULAR-WEEKLY, contains the word *iridium* among the abrasives prohibited, and is so drafted that factories where its use is employed are not exempt from the bill as are jewelers and silversmiths. This fact was called to the attention of the gold pen manufacturers by the publication in THE CIRCULAR-WEEKLY of the report of Chas. R. Young and L. H. Stern, who went to Albany for the Manufacturing Jewelers' Association of New York to fight the original bill.

The gold pen manufacturers of New York held a meeting in the room of the Stationers' Board of Trade, 99 Nassau St., New York, Saturday, to consider what course should be pursued to have the bill killed or amended so that it would not affect them. As a result of this meeting it was learned that the bill had passed the Senate and was in the hands of the Assembly Committee on Rules. A committee of three selected from among the most prominent gold pen manufacturers of the State will probably go to Albany to fight the bill at close range. Meanwhile they have taken steps to safeguard themselves against the sudden passage of the bill by the Assembly.

A. J. Stark Defrauded of $250 by a Novel Swindling Scheme.

DENVER, Col., April 15.—A. J. Stark, of A. J. Stark & Co., was the victim of a new swindling scheme last Saturday. A well-dressed man called at his store and after selecting a $250 diamond requested a blank check to pay for the same, declaring at the time that as he was unknown to the jeweler he would not take the diamond until the check had been cashed.

The jeweler offered him a check which was noted carefully by the man and then refused on the ground that he did business with another bank uptown, whereupon a second check was given to him.

He returned that afternoon, when the jeweler told him the check which now bore Mr. Stark's signature would not be honored.

After expressing his indignation the swindler asked the unsuspecting jeweler to give him the check and he would investigate this insult to his dignity. The check was handed over to him and cashed without question by Mr. Stark's banker, who later informed him that a certain check on another bank indorsed by him was N. G.

Wm. Kronmeyer has added new fixtures to his store at Murphysboro, Ill.

STYLE, DESIGN and FINISH

NOTICE.

On May 1st, our New York Office will be removed to No. 2 Maiden Lane, Room No. 714.

Recommend the Hancock Lockets and Gold Filled Fobs.

The designs are new and original, the highest perfection of skilful designing. Sold by jobbers everywhere.

CHARLES E. HANCOCK CO.,

7 Beverly Street, PROVIDENCE, R. I.

Trans-Atlantic Voyagers.

TO EUROPE.

S. K. Jonas, of Jonas & Brod, New York, will sail Saturday on the *Etruria*.

Oscar Tewels, with Swartchild & Co., Chicago, will sail to-morrow on the *Auguste Victoria*.

Wm. P. Sackett, jewelry buyer of Wanamaker's New York and Philadelphia stores, will sail May 5.

J. A. Currie, Philadelphia, Pa., accompanied by his wife and daughter, will sail May 2 on the *Columbia*.

P. E. Triebs, of Triebs Bros., New York, accompanied by his wife and son, sailed Thursday on the *Moltke*.

W. W. Hayden, of the W. W. Hayden Co., Newark, N. J., accompanied by his wife, will sail June 9 on the *Moltke*.

S. H. Bauman, of the Bauman-Massa Jewelry Co., St. Louis, Mo., accompanied by his wife and two daughters, will sail April 30 on the *Blucher*.

Jacob Strauss, of Jacob Strauss & Sons, New York; Henry Fera, of Fera & Kadison, New York, and Julius Spandau, of Spandau Bros., Pittsburgh, Pa., will sail Tuesday on the *Kaiser Wilhelm II*.

Simon Frankel, of Joseph Frankel's Sons, New York; Lee Bach, with the same firm; Chas. Deitsch, of Deitsch Bros., New York, accompanied by his wife; M. Kahn, of L. & M. Kahn & Co., New York; L. H. Nordlinger, with L. & M. Kahn & Co., New York, and I. Michelson, of I. Michelson & Co., New York, sailed Saturday on the *Kronprinz Wilhelm*.

FROM EUROPE.

N. J. Weil, New York, returned Sunday on the *Celtic*.

A. Knopfmacher, San Francisco, Cal., arrived Wednesday on the *Patricia*.

L. C. Maxwell, of Malliet & Maxwell, New York, arrived Friday on the *Germanic*.

Samuel Lauterbach, with Aaron Lauterbach, New York, arrived Tuesday on the *Finland*.

W. N. Dreyfus, of Dreyfus & Mayer, New York, and Arthur Henius, of Bruhl Bros. & Co., New York, arrived last week on the *Kronprinz Wilhelm*.

Watches, Clocks and Jewelry Shipped to Alaska, Porto Rico and the Philippines.

WASHINGTON, D. C., April 17.—The Treasury Department has prepared some figures showing the commerce of the United States with its noncontiguous territories. Those of interest to the trade are as follows:

Alaska.—During the eight months ending February, 1903, the shipments of clocks and watches to Alaska were valued at $5,599, while the shipments of jewelry and manufactures of gold and silver were valued at $21,295.

Porto Rico.—Jewelry and manufactures of gold and silver to the value of $8,834 were shipped to Porto Rico during the eight months ending February last, as compared with a value of $2,317 for the corresponding period of 1902.

Philippine Islands.—The shipments of clocks and watches to the Philippines decreased from $35,767 during the eight months ending February, 1902, to $8,928 during the corresponding period of 1903.

LETTERS TO THE EDITOR.

Technical Instruction That Is Appreciated by Readers.

NEW PHILADELPHIA, O., April 5, 1903.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

Two weeks have elapsed since we have had any contributions from "Putaneous," or any of the valued helps from the life work of our ideal, the late Mr. Heinrichs. Your recent serial by John J. Bowman hits the exact spot.

You perhaps do not realize how eagerly some of our "Knights of the Tweezers" look forward to the arrival of THE CIRCULAR-WEEKLY, for to us the technical department is nearly everything.

Many of us have reached the middle of life only to find ourselves miserable botches instead of finished workmen, having been taught to tighten cannon pinions with hairs, make roller "jewels" of brass wire, and that saliva and chalk was nature's own remedy for a dirty watch. Well, thanks to modern journalism, we have awakened and regard the proposition which confronts the modern watchmaker in a very optimistic mood.

"Ask and ye shall receive" has never been so forcibly demonstrated as in your current Workshop Notes. I know of one locality, and there must be others, reached by THE CIRCULAR-WEEKLY, where is absolute need of the most elementary principles of watchwork; where the watchmaker never saw a good workman work and is so green in a technical sense that the sap is clearly visible.

To the watchmaker surrounded by skilled workmen in all lines of the metropolis, articles on elementary physics, mechanical drawing, pivoting, springing, etc., seems quite threadbare, but to us who are not so fortunate, our success and the welfare of a community's timepieces depend upon the frequency with which these subjects are treated.

Many men have written about polishing and grinding slips for pivots, using the conventional straight edge, but Mr. Bowman's curved shape awakens new ideas entirely.

What we want are the ideas of all the skilled workmen for the various operations at the bench. There is no skill, science, or but little satisfaction in buying ready made staffs, balance jewels, case springs, etc., and jamming them into good watches haphazard.

Now, don't think we are trespassing upon the domains of the blacksmith and machinist when we say, come on with your information on forging and fitting case springs, particularly for those "cute" little "bum" Swiss and American featherweight gold cases, whose makers we hope will all go to "watchmaker's heaven," and tell us the way of stiffening that "dainty" little lid that buckles down on the glass every time you look at it. Give us all your mechanical operations, no matter if they seem unnecessary to some. Many of us have screw cutting lathes, small forges for the melting of metals, tempering tools, cutters, etc. We want to start at the bottom and *start right*, to be able to handle successfully anything from a grandfather's clock or street clock or town clock to a small size watch. When we get your years of experience we hope to reciprocate.

Yours,
J. E.

The Credit Evil in the Diamond Trade.

NEW YORK, April 6, 1903.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

May I be permitted to use some of your valuable space to comment upon a recent failure. Is it not surprising that this merchant should be able to obtain such a large credit after having failed a few years ago, and shown at that time his unquestionably dishonest methods? It appears that by the aid of the Bankruptcy law his old debts were wiped out, and appreciating the fact that he would in time find no difficulty to obtain credit, he succeeded again in swindling his creditors for a large amount. My sympathies are not with those creditors who gave him the large amount of goods, but are extended to those who *buy* of these same creditors and who cannot meet the ruinous and impossible competition with firms similar to the one in question.

In 1893 you were kind enough to publish my letter, in which I tried to show some of the causes which brought about our financial panic, and which occurred at that period; I laid particular stress upon the fact that our credit system was bad and owing to our unbusinesslike methods which we pursued, we were bound to experience a financial crisis. Does it not appear by our recent disgraceful failures that we have profited but little by our past experiences? Is it not amazing that a merchant should be able to obtain an extraordinary amount of credit, in spite of his past record?

The diamond business has taken such a radical change and grown so largely that the credit we give in this special branch greatly affects the financial condition of the jewelry industry, and in consequence we must devise a better system to insure ourselves against such disastrous failures. We are constantly reminded of the fact that diamonds and all precious stones are high in price and still advancing and besides are scarce; this is true, but our unhealthy competition and anxious desire to sell goods tempts us to take risks and chances which result detrimentally to our direct interests and to those who are indirectly concerned.

Yours truly,
MONROE ENGELSMAN.

An Easter folder, containing four pages, and an unattached leaflet was last week sent to the customers of Wm. L. Sexton & Co., 7 Maiden Lane. The folder was a particularly neat and artistic piece of work and very appropriate to the season. On its front cover in gold and green was a bunch of Easter lilies. These were raised on a circular background of silver. On the back cover was a calendar for the month of April. On the inside of the folder was a pen sketch of mermaid on the crest of an ocean wave, grasping the receiver of a telephone and saying: "Hello. Central! Give me the man who's been stealing all my pearls." Beneath this sketch are a few words of description and advice to customers. The loose leaflet is devoted to a description of the concern's spring back studs.

Announcement is hereby made of our removal from 64 John Street to larger quarters at

87 Maiden Lane.

A cordial invitation is extended to the trade to visit us at our new location.

Silbermann & Co.,

PH. SILBERMANN.
MAURICE KOHN.
MILTON H. WALLENSTEIN.

Can We Send Coals To Newcastle?

IT is a fact not generally known that France is one of the largest importing nations in the world, something like $153,000,000 worth of manufactured goods being imported annually by our sister republic across the sea. Of this enormous sum only $18,000,000 is furnished by the United States, which is a little less than 12 per cent. of the total. In the lines which come into the jewelry and kindred trades there has been an increase in the exports to France during the last fiscal year, as will be seen from a perusal of the following table:

	1902.	1901.
Clocks	$860	$275
Watches	3,785	1,679
Jewelry	50,550	18,693
All other manufacturings of gold and silver	14,159	10,311
Plated ware	3,638	7,415

The trade of our country with France is handicapped to some extent by the heavier freights and customs duties our shippers have to pay, in comparison with their German and English competitors. The question arises whether, under the present conditions, even though it be the home of jewelry, more of our manufactured goods could not be exported to that country. The answer of well-posted consular officials would be in the affirmative, considering the good quality and the efficiency of American-made goods. The methods which American manufacturers use in introducing their goods in France, however, do not compare favorably with those they employ in their own markets. What the future of our export trade will be when our exporters have reduced the exploitation of their goods abroad to an exact science, as our German and English competitors have done, would be hard to forecast. The general opinion in many circles is that the outlook is bright.

Spasmodic attempts to create foreign trade are never successful. If our manufacturers really desire to secure outlets abroad for their products, they should make systematic efforts, based on sound business methods, to do so. They should become conversant with the needs and mode of life of the foreigners to whom they wish to sell their goods and furnish them with the articles which will be acceptable. Let our exporters treat the foreigners courteously and kindly; let them feel that they can get what they want, and that they can always depend upon quick and complete shipments of their orders. The principle that anything is good enough for foreigners will not increase our export trade. Even more care and attention should be given to filling orders for foreign markets than those for the home markets, for mistakes are harder to rectify. They should not send too much or too little, but should execute an order exactly as it is given, or else vexatious delays are bound to occur, with possibly a refusal of the goods and a lawsuit, and certainly loss of future trade. Then, too, the sooner American exporters learn the metric system of weights and measures, the better chance they will have of successfully meeting foreign competition in the French markets.

A Decision Awaited.

THERE is at present on trial in the United States District Court at New York an action of interest to diamond importers wherein has been raised a novel point, the decision on which will be anxiously awaited. This is the action *in rem* brought by the Government to declare forfeited $27,000 worth of diamonds seized from a smuggler, Feb. 23, 1902.

In this case there is no question as to the smuggling of the gems, the accused having been convicted of the crime. The only point before the Court is whether or not the goods shall be returned to an Antwerp merchant, who claims that he gave them on memorandum to a third party who turned them over to the smuggler, and had never parted with the title.

A contention of this kind while made in one or two cases, has never been fought to an issue as in the case now pending, and the decision of the Court as to the law on the subject will undoubtedly be important and of interest to all trades that have to contend with smugglers.

The Jewelers Fraternity of New Orleans, Elects Officers.

NEW ORLEANS, La., April 15.—The Jewelers' Fraternity, organized in this city last September, and now having a membership of 70, had an election of officers last week at Union Hall, 134 Exchange Pl., and the following were chosen to serve for the ensuing year: Louis W. Gery, president; Otto Granzin, vice-president; Martin Leiser, recording secretary; Alphonse Mandot, financial secretary; Louis D. Finke, treasurer; Gustave A. Schmidt, Jr., warden; Dr. C. N. Chavigny, physician.

The report of the treasurer showed the Fraternity to be in a flourishing condition, the membership growing and the fraternal purposes of the order being carried on splendidly. It was decided at last week's meeting to have a smoker on May 8th at Union Hall.

Death of Edward J. Jeidell.

Edward J. Jeidell, a prominent young author and newspaper man who was well known to the jewelry trade of New York and the east, died Saturday at the home of his parents, 407 W. 148th St., New York. Mr. Jeidell was but 25 years old and had already obtained a prominence as an author and poet, and his death cuts short a career that would have been brilliant in the literary world.

Mr. Jeidell was born in Philadelphia in July, 1877, and received his early education in Germany and in New York. When but about 17 years old he started in the advertising business and soon made a name for himself for his clever work in this line. In the Spring of 1896 he joined the force of THE JEWELERS' CIRCULAR and remained with this publication until December, 1899. Shortly after this he founded the magazine known as *Grist*, and was its editor, proprietor and principal contributor for some time. He then joined the staff of the New York *Journal*, and after serving in an editorial capacity for a few years went on the *World* in May of last year and remained with that journal until ill health forced him to quit work late in September. In the hope of recuperating he spent some time in the Adirondack Mountains and came back much improved, but his lungs were found to be badly affected and he grew gradually worse until his death. Mr. Jeidell's last work was on a book which he had hoped to complete before being called by the Grim Reaper, but this desire was not to be granted.

The deceased possessed strong magnetism, had a sincere, wholesouled and enthusiastic disposition, and this, combined with his natural brilliancy and ability, made for him friends wherever he went. He was a born poet and became well known as a writer of verses while on the staff of THE JEWELERS' CIRCULAR. He was a writer of force, had a brilliant style, was a keen humorist and a critic of ability. None who ever met him but was impressed by the sincerity of his character, his knowledge and his natural brilliancy. His sudden and untimely death will be regretted not only by his intimate friends but by a host of members of the jewelry trade who knew him and loved him for what he was.

The funeral services, which were private, were held Monday morning at the home of his parents.

Death of Geo. F. Farnum.

PORT JERVIS, N. Y., April 16.—The funeral of Geo. F. Farnum, retail jeweler at Port Jervis, N. Y., was held from his late residence, 61 Sussex St., Thursday. The deceased was buried with lodge honors, having several years been a member of the I. O. O. F.

Mr. Farnum was born in Port Jervis April 7, 1868, and attended the public school here until 1883, when he left the Port Jervis Academy to take a course in Rutgers College. In 1892 he went west, returnturning to Port Jervis in 1895. He became interested in the jewelry business about 1898 and entered into partnership with Emmet Van Sickle. In 1900 this concern dissolved and Mr. Farnum purchased the entire stock. The deceased is survived by a widow and one child.

Last Week's New York Arrivals.

THE CIRCULAR-WEEKLY each day posts in its office a bulletin of the latest buyers visiting New York, which every member of the trade is cordially invited to copy.

For the sum of $10, (payable in advance, a daily list will be mailed or delivered, during the Spring season (ending July 1, 1903, to the offices of those desiring this service.

Death of Charles L. Yeakel.

BALTIMORE, Md., April 15.—Charles L. Yeakel died yesterday at his home, 2118 Pennsylvania Ave., aged 65 years.

Mr. Yeakel was born in Germany and came to this country 40 years ago. He had been in the jewelry business here for many years.

He is survived by a widow and four sons; Henry, Louis, John and Raymond—and two daughters. He is also survived by two brothers in Baltimore and one in Germany.

DIAMONDS!

CROSS & BEGUELIN

Importers and Cutters of Diamonds and Precious Stones

6 Rue de Mesiay, PARIS *Telephone, 2188 Cortlandt* *17 Maiden Lane, NEW YORK*

New Stores and Enterprises.

(New Optical concerns will be found in the Optical Department and new enterprises in New York will be found under heading "New York Notes.")

Chas. Myhre has opened a new store at Andover, S. D.

J. O. Brock is established in business in Westminster, Ill.

A new jewelry store was recently opened in Bantam, Conn.

J. L. Green has opened a repair shop in Social Circle, Ga.

Ben. Paust will shortly erect a new jewelry store at Pine River, Minn.

Paltrowitz & Benyas intend to engage in the jewelry business at Negaunee, Mich.

W. H. Haywood, for some years with Geo. A. Disque, Erie, Pa., is in business for himself at 1518 Peach St., Erie.

Martin Koch, formerly employed in a New York department store, will start a jewelry business in Hazleton, Pa.

A. J. West, formerly of Council Bluffs, Ia., has set out for Wichita, Kan., where he will start a retail jewelry business.

Jesse W. Hall, Cazenovia, N. Y., has opened a watch repairing department in the front of Charles Miller's furniture store in that town.

The Nease-Meyer Glass Co. was recently incorporated in Wellsburg, W. Va., with a capital stock of $100,000, the incorporators being: H. B. and S. N. Nease, James Frank, M. D. Galbreath, and John C. Palmer, all of Wellsburg.

The Fresno Diamond Co. has just been incorporated in Fresno, Cal., with a capital stock of $25,000, of which $20,000 has been subscribed. The directors are: F. W. Fisher, W. A. Cannady, Lee Menefee, R. S. McGuire, and J. O. Traber, of Fresno.

Jewelers' Gold Bars Withdrawn and Exchanged at New York.

Week Ended April 18, 1903.

The U. S. Assay Office reports:	
Gold bars exchanged for gold coin	$287,226.18
Gold bars paid depositors	202,044.60
Total	$489,270.78
Of this the gold bars exchanged for gold coin are reported by the Sub-Treasury as follows:	
April 13	$66,115.46
" 14	71,607.36
" 15	25,855.11
" 16	51,983.63
" 17	45,860.53
" 18	25,806.29
Total	$287,228.38

Fire last week damaged the stock of Benjamin Settle, Russellville, Ky., to the extent of $400.

A. Lynde has been succeeded in business in Atlantic City, N. J., by M. R. Taylor, who is established in newly furnished quarters at 25 S. Kentucky Ave.

Floyd R. Cross was arraigned in Court last week in Grand Rapids, Mich., accused of assault by Julius Knieper. The trouble is said to have grown out of the sale of a jewelry business in Grand Rapids, one of the terms of the sale being that Knieper should not enter into the business. He did so, however, and Cross took out an injunction, whereupon a fight and subsequently court proceedings followed.

New York Notes.

A. Koppel, who was formerly with I. Gordon, 866 Columbus Ave., has opened a store at 766 Third Ave.

H. Nefack, formerly a retail jeweler of Albany, who for the past year has conducted a jewelry store at 221 Park Row, has opened a new jewelry establishment at 417 Third Ave.

Theodore Schmidt & Co., 1281 Broadway, Brooklyn, will move some time in May to their new building, 1255-1257 Broadway. The new establishment is 28x80 feet and will be fitted to meet all the requirements of the concern's business.

A meeting of the creditors of Geo. Lando, optician and dealer in phonographic supplies, 451 Grand St., who filed a voluntary petition in bankruptcy the first week in April, will be held Wednesday, April 29, at 10.30 A. M., in the office of Referee in Bankruptcy Nathaniel A. Prentiss, 120 Broadway.

Julius Wodiska, manufacturing jeweler, formerly at 52 Maiden Lane, has removed to 40 John St., where he occupies the entire building, with the exception of the store floor. In his new quarters Mr. Wodiska has much more room than formerly, and is in a better condition than ever before to meet the demands of his customers.

The first meeting of the creditors of the Spencer Optical Mfg. Co., 15 Maiden Lane, will be held Monday, April 27, at 10.30 A. M., in the office of Referee in Bankruptcy Morris S. Wise, 40 Exchange Pl. An involuntary petition in bankruptcy was filed against this concern in the United States District Court at New York April 2.

A report from Paterson, N. J., last week is to the effect that the jewelry store of Isman Schwerin, 4 Temple St., that city, was entered by a burglar and $300 worth of goods taken. The safe was locked, so no diamonds were stolen. Entrance was gained by cutting a panel beneath the show window. No clue was left by the burglar.

The Richter Watch & Jewelry Co., now at 444 Third Ave., will remove some time in May to 450 Third Ave., where it will temporarily occupy a part of the corner drug store. The building at present occupied by the company is to be torn down and a new one erected. When this new building is completed the concern will move back to the old number and will have much larger and more up-to-date quarters than formerly.

An auction sale of Persian, Chinese and other ceramics, Persian and Turkish silverware, antique East Indian metal work, Oriental brass and copper, Persian lacquered pin and mirror cases, book covers and miniature Japanese drawings and color prints, and a number of other antique pieces of jewelry, was held Thursday by Thomas E. Kirby at the American Art Galleries. The total amount realized from the sale was about $2,700.

The New York Standard Watch Co., whose plant is on Woodward St., near Communipaw Ave., Jersey City, N. J., is contemplating the erection of another building to be used for office and manufacturing purposes. The proposed structure will occupy the plot of ground between the present main building of the concern and the frame structure at Communipaw Ave. and Woodward St., will be built of brick, three stories high, and will be of the same style of architecture as the present building. Building operations will be begun within a few weeks.

The argument for an injunction in the suit brought by Michael P. O'Connor, of New York, and Wm. H. Watrous, of Hartford, Conn., to restrain the so-called voting trust, formed by the International Silver Co.'s stockholders, from voting pool stock, which was begun in the Court of Chancery at Jersey City, N. J., the last week in March, has been postponed until Monday, April 27. The argument was set for Monday before Vice-Chancellor Stevens in the Court of Chancery, but was adjourned as a matter of accommodation to the attorneys.

The heirs of Edward Douglass, the jeweler who ran a little shop at 252 Myrtle Ave., Brooklyn, and who died May 9, 1902, are seeking to disprove a claim for $6,000 by Mary Smith, the tenant of Mr. Douglass, for services the woman claims to have rendered the deceased jeweler during six years previous to his death. The amount of property which Douglass left on his death caused considerable surprise in the jewelry trade of Brooklyn, because everything about his shop and home bore signs of poverty. He came from Scotland several years ago, where he left a wife and two sons who are now seeking to obtain the remainder of his estate.

The Manufacturing Jewelers' Association of New York has passed a resolution extending a vote of thanks to Chas. R. Jung, president of the association, and L. H. Stern, of Stern Bros. & Co., who were so successful at Albany last week in dealing with the Brackett Bill on polishing and buffing. The work which these two men did as a committee for the association was told of in the last issue of THE CIRCULAR-WEEKLY, and speaks for itself. The association was extremely pleased with the good showing the committee made and with the amendments which they had secured to the bill. The bill with these amendments was passed Friday by the Senate, and is now with the Committee on Rules in the Assembly.

It was stated in the newspapers of Jersey City last week that Wm. F. Doll, of the Wm. F. Doll Mfg. Co., 175 Broadway, had been sued by Robert R. Gibbs, of Somerville, N. J., for $5,000 damages for false arrest. Mr. Doll stated to THE CIRCULAR-WEEKLY reporter Monday that this report is entirely false, and that he has not been sued by Mr. Gibbs, but that, on the contrary, he is endeavoring to have Mr. Gibbs arrested and brought to trial. Mr. Doll declared that Gibbs had taken a sample case containing $45 worth of rings from him last November and that since that time a warrant has been out for his arrest. This warrant, Mr. Doll said, was only good in New York State, and that Mr. Gibbs had not been found in New York, so that it could not be served upon him. Mr. Gibbs was formerly a salesman for Mr. Doll, and the sample case in question, Mr. Doll says, he took with him on one of his trips, and never returned it.

A woman who gave her name as Minna Williams, accused of having stolen from a wealthy English family jewels valued at $30,000, was arrested Thursday and held by United States Commissioner Shields to await extradition. Among the jewels the woman is charged with stealing is a very valuable pearl necklace, and while confessing her guilt at the time of her arrest she declined to tell where it was. This information, however, was supplied by the head of the firm of Chas. W. Schumann's Sons, retail jewelers at 937 Broadway, who, on hearing the story of the arrest of the woman, called up the legal representative of the British Consulate and told that the necklace was in the firm's possession. The woman had left the necklace at the store to be sold, but Mr. Schumann being suspicious did nothing to force its sale, even keeping the pearls back from exhibition, as he wanted to wait for developments. The woman is described as a small blonde about 27 years of age. She was formerly in the employ of the wealthy English family, from whom, it is claimed, she stole the jewels.

S. Lyons, of the Lyons Gem Co., importers of precious and semi-precious stones, 14 Maiden Lane, came home from the General Memorial Hospital, 106th St.

Fine Glassware for the Table.

Plain, Engraved, Etched, Cut, and Rock Crystal Decorations.

C. DORFLINGER & SONS, 36 Murray Street, New York.

and Eighth Ave., last week, where he had been confined for nearly three weeks by an operation performed on a gland in his throat. Mr. Lyons is 79 years old, and has been on Maiden Lane more than 50 years. He says the operation has in no wise weakened him, and that he is as healthy and lively as ever.

Julius Van Vliet, of the Berlin office of Van Vliet, Latz Co., 434 Broadway, arrived this week on the *Kaiser Wilhelm II.*

J. C. Proudman, for the past 16 years located at 307 Eighth Ave., will soon locate at 49 E. 59th St., between Madison and Fourth Aves.

Wolfsheim & Sachs, makers of jewelry cases, will remove May 1 from their present quarters, at 48 Maiden Lane. Their salesroom will be in the store at 40 Maiden Lane, and their factory will occupy five floors at 10 Gold St., with a floor space of 25x100 feet each. This increase in space will afford facilities for filling all orders promptly and efficiently.

A. Knopfmacher, a diamond merchant of 206 Kearney St., San Francisco, Cal., who arrived in New York Thursday from Europe on the *Patricia,* was put to considerable inconvenience by the Customs officials, because some malicious person in San Francisco had sent word that Knopfmacher was a diamond smuggler. The Customs officers took him aboard the boat and went through every article of clothing that he wore, even tapping the soles of his shoes to see if there were any diamonds in them. Mr. Knopfmacher had already declared diamonds valued at $60,000, and after the examination the Customs officers were satisfied that those were the only stones he had with him.

Luigi and Archilles Porzio, who say they live at 258 15th St., Brooklyn, were arrested Thursday as they were disembarking from the steamship *Palatia* at the Hamburg-American line pier in Hoboken, N. J. The arrest was the outcome of a discovery made by Customs Inspector Donohue. The men had already declared several trunks and were awaiting to have them passed by the customs officials, when Donohue bumped against them. As he jostled them he heard the rattle of metal, and, pursuing his investigations still further, he found that both of the men were loaded with jewelry. He took them to a room, where the men disrobed. Each wore a tight fitting garment containing 48 pockets. In each of these pockets was a silver watch, there being 99 in all. The garments also accommodated about $1,000 worth of diamonds. The men were taken before United States Commissioner Russ in Hoboken and held for examination. They said that they had formerly been employed by a big watch manufacturing concern in Ansonia, Conn., and that they had gone abroad for the jewelry with the intention of disposing of it in the Italian quarter of New York City.

Death of Edwin C. Macomber.

WATERTOWN, N. Y., April 20.—The death of Edwin C. Macomber occurred in this city last night at the home of his father-in-law, Dr. E. W. Trowbridge, at the age of 30 years. The deceased was an expert jeweler and engraver and had been engaged in business in Batavia, where for the past two years he had suffered from tuberculosis. He returned here last Tuesday.

Besides his wife he is survived by his father, John Macomber, of this city; one sister and two brothers. The funeral will be held from the home of his father, in Rutland St., Wednesday morning.

Plant of the Trenton Watch Co. to Be Greatly Enlarged.

TRENTON, N. J., April 15.—The new improvements which the directors of the Trenton Watch Co., at a recent meeting, decided to make to the factory in this city will, it is said, practically double the output of the company.

Authority has been given for the building of a structure 33x100 feet to be connected with the main building. This will be used as a machine shop allowing the present machine shop to be used as a plate room.

Connecticut.

G. S. Moshier, New London, has engaged the services of R. P. Frazier as watchmaker.

The Waterbury Clock Co. is about to erect an addition to its plant. It will be five stories high and 43x116 feet.

Thos. I. Gwillim, a jeweler of Bristol, last week gave an elaborate reception to his son, Stanley S. Gwillim, on the occasion of the latter's wedding.

C. D. Morris and C. W. Leavenworth, Wallingford, attended the launching of the steamer *Minnesota* at New London last Thursday.

C. H. Case, Hartford, furnished the handsome diamond studded jewel recently presented to Past Illustrious Potentate, Rial S. Peck.

E. C. Parish, Terryville, has met with a sad bereavement in the death of his wife, who died recently in a Hartford hospital of pneumonia, aged 46 years.

Junius Douglass has returned from a trip through the southern States in the interest of the American Silver Co., and is now visiting his home in Stafford Heights, Forestville.

The recent labor troubles between the buffers and the management of factory "H," of the International Silver Co., Meriden, have been settled to the satisfaction of all concerned.

The management of the Ansonia branch of the International Silver Co. has shown its solicitude for the good health of its employes by installing a device for providing them with pure drinking water. The apparatus consists of a novel filter, through which passes all the water used in the factory for drinking purposes. From this filter the water is carried to metal tanks in pipes, which in Summer time are coiled about receptacles packed with ice.

The death is announced of Henry Baum, a former employe of Landers, Frary & Clark, New Britain. Mr. Baum was 76 years of age, and had lived in New Britain since 1862.

Mrs. Drusilla Welch Mitchell, Bristol, whose funeral took place last week, was a sister of the late Elisha N. Welch, of Bristol, founder of the E. N. Welch Mfg. Co., Forestville.

The wife of Fritz Weber, Meriden, was pleasantly surprised last week by the members of Anna Ottendorfer Lodge, D. O. H., at her home, 27 South Ave., the occasion being her birthday.

J. H. G. Durant, New Haven, gave a brilliant reception to his daughter Caroline, April 15, on the occasion of her marriage to Henry K. Flagge. The couple will reside in West Haven.

Mrs. J. Hart Welch has shipped her household goods from Forestville to New York, where she will reside. Her son, E. Niles Welch, of Concord, N. H., was a recent visitor to Forestville.

The bridge builders are busily engaged at work in Forestville erecting an iron bridge over the Pequabuck River, connecting the Highland Division tracks with the factory of the Sessions Clock Co.

The Bradley & Hubbard Mfg. Co. recently installed elaborate electrical arrangements in the new Meriden Public Library. Ed. Miller, Jr., of the company, has presented to the library two de luxe editions of Duruy's History of Greece and Rome.

The death is announced of Eugene A. Porter, Hartford, a former traveling representative of the International Silver Co. Mr. Porter died at San Antonio, Tex., whither he had gone with the hope of regaining his health.

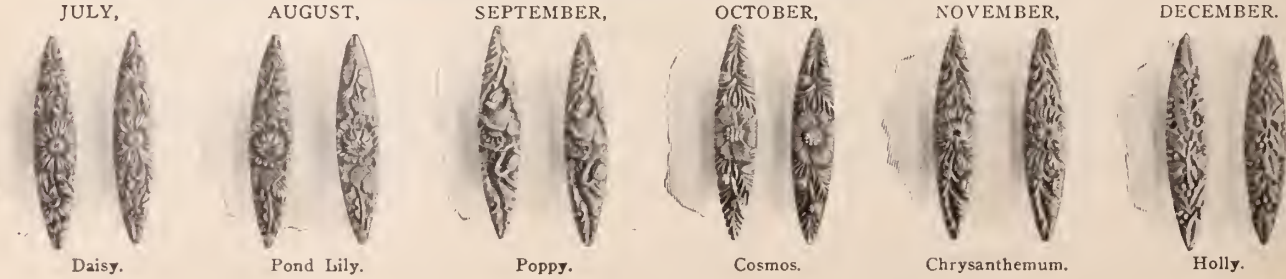
A number of the officials of the Waterbury Clock Co. vigorously deny the assertion of several strikers who allege that the company had discharged a man because he had worked for the Connecticut Railway Co., and was a member of the Trolleymen's Union.

The 900 employes of the Seth Thomas Clock Co., Thomaston, are much elated over the notice posted in the factory announcing that from June 1 to Oct. 1, 55 hours will constitute a week's work, with 60 hours' pay. The concession was granted voluntarily by the company without any demands on the part of the men.

A meeting of the creditors of John F. Parker, Middletown, was held at the office of Attorney Clarence E. Bacon last Wednesday afternoon, and his financial condition discussed without arriving at any definite conclusion. Mr. Parker suggested bankruptcy as the best way out of his difficulties, while many of his creditors thought it more advisable to sell the stock and divide the proceeds. The latter course will probably be adopted. P. T. Ives, Meriden, has been elected appraiser of the stock.

JANUARY, Wild Rose. FEBRUARY, Pink. MARCH, Violet. APRIL, Easter Lily. MAY, Lily of the Valley. JUNE, Rose.

BIRTH FLOWER PINS, A NEW IDEA IN BIB AND CUFF PINS.



10 K. solid back, rose or green gold finish. A novelty which every jeweler should carry in stock. An article equally appropriate for ladies and children; dainty in design and execution, modest in price, and a good seller for every month in the year.

First Annual Ball of Jewelry Workers' Union of Providence, R. I.

PROVIDENCE, R. I., April 17.—A large gathering attended the first annual ball given by the Jewelry Workers' Union of this city, in Music Hall, last night. A concert preceded the grand march which was led by International President Herman Vollmer and Miss Minnie G. Hussey.

The committee and those in charge of the affair were as follows:

Committee of Arrangements—George W. Herrick, chairman; Sam L. Tatz, secretary; Joseph F. Arnold, treasurer; Albert F. Lovell, Walter J. Walsh, James F. Feeney, Thomas W. Smith, Edward E. Schleicher, Samuel Bomes, George E. Brady, William Reynolds, William J. Holland, Thomas Delaney, Michael J. O'Brien, Howard Stott, Jeremiah J. Dwyer and W. E. Keegan.

General floor director, George W. Herrick; assistants, Peter M. McNally and William F. Reynolds; aids, Jeremiah J. Dwyer, Howard Scott, Walter J. Walsh, W. E. Keegan, William J. Holland, Edward E. Schleicher, Albert F. Lovell, Samuel Bomes, J. F. Feeney.

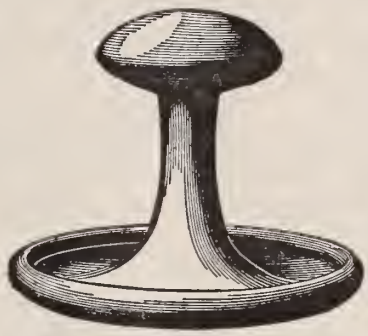
The reception committee consisted of Frank J. Brooks, Thomas W. Smith, George Acres, George E. Brady, H. S. Lichtenstein, Joseph Hennessey.

After the festivities each one present carried away a handsome souvenir programme giving a short history of the organization, together with half-tone pictures of all the officers. President Hugh F. Scullin is elated over the success of the affair and promises even greater things for the next social meeting.

Items From Here and There.

H. Ellsworth Lewis has just been granted his discharge from the Topeka, Kan., prison, where he had served a sentence of two years for stealing two diamond rings from F. W. Swearingen, a jeweler of Topeka.

Dispatches from Wrightsville, Pa., announce that there is a good opening for a jewelry store at that place. Since the retirement of Emanuel W. Tome, those in need of watch repairing, etc., are obliged to go to Columbia.



Fred Lewis and John Fitzgerald, two boys who recently pleaded guilty to breaking into Huber & Bunker's store, Superior, Wis., have been sentenced to serve two and a half and two years, respectively, in the State Reformatory at Green Bay.

Freundenheim, Levy & Lande, Elmira, N. Y., have presented a sterling silver masonic trowel to the Masonic Festival Street Fair Committee, to be used as a trophy at the coming fair, which will be held from June 22 to July 4. The trowel will be awarded to the lodge receiving the most votes, each of which will be sold for a small sum.

Frank A. Fenn, a jeweler of Clyde, O., was swindled out of three gold watches a short time ago by a man giving his name as C. M. McKown. The latter pretended that he was about to give prizes at a local entertainment for the benefit of the Women's Relief Corps and the Clyde Firemen. The Toledo police are looking for McKown, who is an elderly man.

The Giant of Collar Buttons

IN QUALITY,
IN SALES.

One Million Five Hundred Thousand Krementz One-Piece Collar Buttons made and sold within the last year. . . . . .

WHY? Because of their HIGHEST QUALITY, BEST CONSTRUCTION, GIVING THE MOST WEAR, AND GREATEST COMFORT and their IRON-CLAD GUARANTEE.

To verify this we invite the trade to read **"The Story of a Collar Button, with Illustrations;"** which may be had **FREE** for the asking, and to try the experiment suggested on page 5 of that booklet.

Extract from "Printers' Ink," Nov. 23, 1898.

The Little Schoolmaster now suggests, to every pupil in his class, to send a two-cent stamp to Krementz & Co., 49 Chestnut Street, Newark, N. J., and ask to be favored with a copy of their leaflet, "The Story of a Collar Button." Afterward, if any pupil will send to *Printers' Ink* another leaflet, new or old, that is half as good as this one, or that approaches it in excellence, the deserving student will be rewarded with one of *Printers' Ink's* souvenir spoons as an acknowledgment of his discovery and contribution. "The Story of a Collar Button" is the best piece of advertisement construction that has come to *Printers' Ink's* attention in the yeat of our Lord 1898.

Should you wish to utilize this booklet to increase your collar button business, we will, on receipt of your order, print your card upon and send you a quantity of them.

Krementz One-Piece Collar Buttons are stamped as follows, ON BACKS:

Patent sustained by United States Supreme Court.

Quality and Construction have made our reputation.

All Krementz Collar Buttons are Manufactured by

KREMENTZ & CO.,

in their Factory,

49 Chestnut Street,

NEWARK, N. J.

PARKS BROS. & ROGERS,

A. Kauffman contemplates abandoning his vocation as traveling representative to engage in the diamond business at Bushnell, Ill.

Wm. Waldo, Grand Rapids, Wis., has returned from Chicago, where he had been taking a course in jewelry working and engraving.

Swope & Nehf, Terre Haute, Ind., have offered a handsome medal for a contest in marksmanship to be held by Company B of that place.

W. J. Harrison, Palmyra, Neb., recently lost his building and stock by fire. His friends have come to the rescue and are setting him up again.

The Transvaal Diamond Co., Utica, N. Y., which concern has a store in Syracuse, N. Y., has decided to close the former May 1. The company has sold its lease to another concern.

The engagement of Calvin P. Engle, a member of the Wilkes-Barre, Pa., jewelry firm of Clarke & Engle, to Miss Catherine McConn, of Hazleton, has been announced.

Samuel Baumfeldt, San Antonio, Tex., died recently after a very brief illness. Mr. Baumfeldt was but 21 years of age and had started in the jewelry business only a short time ago.

The Danville, Pa., Common Council is considering an ordinance licensing transient retailers. The license fee will be $2 for one day's selling, $10 for one week, and $150 for one year.

A trunk containing $15,000 worth of diamonds and miscellaneous jewelry, and bound for Cleveland, O., in charge of A. A. Gillett, of Gillett & White, Buffalo, N. Y., was accidentally lost last week, having been taken to the wrong hotel. Mr. Gillette was much relieved when detectives finally reported its recovery.

A receiver has been appointed for the business of G. A. Wheeler, Waldo, Ark.

J. R. Worth, Geneva, N. Y., has moved his stock into newly furnished quarters at 43 Linden St.

Wm. Warren Card, father of Henry Stone Card, of Mather Bros., New Castle, Pa., was fatally injured last week by being struck by a street car. Mr. Card died without regaining consciousness.

N. J. Myers and H. J. Richmond have formed a co-partnership as manufacturing jewelers at 356 Fulton St., Troy, N. Y., and will also do a business as jobbers of all grades of watches, clocks and silverware.

Miss Lillian Elizabeth Lanz, daughter of Gustave Lanz, Norristown, Pa., was wedded April 16 to Dr. Calvin Eroh. The ceremony was performed at the Lanz residence, and was witnessed by a large company of guests.

The store of Stoops & Coulter, Slippery Rock, Pa., was looted of several hundred dollars worth of goods, including watches and jewelry, last week. Two horses and two wagons were stolen by the thieves with which to carry off their plunder.

It is reported that Ralph M. Cohen, a jewelry salesman, was recently robbed of several hundred dollars' worth of jewelry. He was going from Antigo, Wis., to Ashland, and had to lay over in the former town several hours. When he arrived at Ashland he found his satchel had been tampered with and the most valuable goods taken. The police at the different towns were notified.

The J. W. Pollins Co., Greensburg, Pa., has opened its big six-story steel frame store building, 72x100 feet, and employs 75 people. The company has a paid-up capital of $200,000, with the following officers: J. W. Pollins, president; W. H. Galbraith, vice-president; J. S. Pollins, treasurer; R. L. Jamison, secretary; J. E. Heck, general manager of the 64 departments. The jewelry department is on the second or main floor.

The South Bend Watch Co., which opened its finely equipped plant last month at South Bend, Ind., will not continue to manufacture any of the old models made by the Columbus Watch Co. The new product of the company will have the name "South Bend Watch Co." stamped thereon, which imprint will be used until the adoption of special trade-marks. Their new building is equipped with all modern improvements, and is a model of its kind.

The case against John J. Clifford, Worcester, Mass., charged with the larceny of goods valued at $136 from his employer, H. B. De Wolf, a jeweler of New Bedford, was tried in the Police Court last Wednesday and the defendant was acquitted. Mr. De Wolf's charge against Clifford involved a long statement relating to the sales and commissions due Clifford as a salesman, and was to the effect that there was $136 that had not been accounted for. Clifford denied this, and explained to the Court that he had paid for everything out of the 10 per cent. commission which he was to receive. The Court ordered him discharged.

W. W. HARRISON,

MANUFACTURER OF

Umbrellas and Walking Sticks

OF THE BETTER SORT,

405 BROADWAY, NEW YORK.

SOME POINTS OF EXCELLENCE in Harrison Umbrellas, gained by 25 years of careful study of the details so essential in making an umbrella adapted to the wants of the Jewelry trade:

Exclusive Designs in Handles. Quality of Silks.
Perfection of Finish in Handles. Finest Tempered English Frames.
Compactness in Roll. Strength of Construction.

Harrison's Gold Head Walking Sticks have stood the test for more than a quarter of a century. They comprise all the Standard Shapes and are made of twenty-year 14k. Filled Gold and of twenty-year 14k. Filled Gold with 14k. Solid Gold tops, ends and name plates. Also a line of Solid Gold Heads. Harrison's Superb Line of Mounted Riding Crops are carried by the best trade.

The only Umbrella and Walking Stick Manufacturer in the United States not selling to the Dry Goods and Department Stores.

W. W. HARRISON, 405 Broadway, New York.

TRADE-MARKS.

TO MANUFACTURERS AND JOBBERS:

WE HAVE now in preparation the second edition of *"Trade-Marks of the Jewelry and Kindred Trades"* and in order that this work may be as complete and accurate as it is possible to make it, we request all manufacturers and jobbers to send us a list of such marks as they may now use, or have ever used, together with such information (the kind and quality of goods upon which the marks are used, etc.) as may be germane to the subject. Send cuts of marks if possible. If not, send clear, printed impressions or drawings, in black ink.

The earliest attention is solicited as it is of the utmost importance to every manufacturer and jobber to have his mark recorded in this volume.

VOL. XLVI. CHICAGO, WEDNESDAY, APRIL 22, 1903. No. 12.

Chicago Notes.

H. B. Koolman, Wellsburg, Ia., visited this market on a buying trip last week.

S. J. Wheeler, Coloosa, I. T., has opened a branch store at Broken Arrow, I. T.

Mr. Brown, representing A. J. Reinhardt, Lincoln, Ill., was a trade visitor last week.

It is reported here that J. E. Wright has succeeded G. W. Dantzler at Winona, Miss.

Mr. Obereich, of Obereich & Arnold, La Porte, Ind., called on the local trade last week.

A. Zierley, of A. Zierley & Co., Grand Rapids, Mich., visited the trade here last week.

The name of the firm of Dreyer, Lochau & Co. has been changed to Dreyer, Lochau & Ohm.

E. S. Hyman, of Hyman, Berg & Co., is spending a couple of weeks at West Baden, Ind.

N. B. Barton, of the Ostby & Barton Co., is spending this week at the local office of the company.

Scott Bros., engravers, will move about May 1 from the Columbus building to the Stewart building.

The corporation of F. A. Hardy & Co., wholesale opticians, has increased its capital stock to $300,000.

Emanuel Untermeyer, of Charles Keller & Co., New York, was in Chicago last week on his annual trip.

Duane Wager, of A. C. Bard & Co., was detained at home for two weeks past by an attack of la grippe.

W. B. Porter & Co., manufacturing jewelers, moved last week from 52 State St. to 57 Washington St.

J. F. Dean, of the factory of Reed & Barton, spent one day last week at the local office of the company.

Mr. Giddings, of C. P. Giddings & Sons, Sterling, Ill., looked over various lines in this market last week.

Mr. Meyer, buyer for the W. L. Roberts Supply Co., Minneapolis, Minn., called on the local trade last week.

W. J. Miller, local manager for the Seth Thomas Clock Co., is spending a couple of weeks at French Lick, Ind.

A. Eisenberg, of A. Eisenberg & Co., San Francisco, Cal., stopped over in this city last week while on his way east.

The American Tontine Diamond Co., of East St. Louis, Ill., has been incorporated for $2,000 to deal in diamonds. The incorporators were Louis Townsley, J. C. Temple and James Middleton.

G. F. Williams and G. M. Sherpardson, traveling from the local office of Wm. A. Rogers, Ltd., have returned from their territories.

L. R. Miller, one of J. W. Forsinger's travelers, was married yesterday to Miss Grace Simons at the home of the bride in this city.

Edw. Schrader, of Schrader-Wittstein Co., who has been spending several weeks abroad, will sail for home from Liverpool April 25.

E. M. Lunt, western manager for the Towle Mfg. Co., is spending a couple of weeks at the company's factory in Newburyport, Mass.

Wm. T. Gough, of Carter, Howe & Co., was in this city last week for the first time in several years, and received a warm welcome from his old friends.

John Grant, western manager for the New Haven Clock Co., recently returned from a two weeks' visit to the factroy of the company at New Haven, Conn.

Mr. and Mrs. Sundberg, Fargo, N. D., stopped over and visited the trade in this city last week while en route home from a vacation at Hot Springs, Ark.

F. S. Fisher, Tuscola, Ill., has closed out his business in that town, and while in this city last week informed his friends that he was looking for a new location.

O. S. Hofman, of the Hofman Jewelry Co., Columbus, O., was in this city last week buying new fixtures for the store which his company is remodeling.

Walter Green, of Carrau & Green, San Francisco, Cal., stopped over in this city last week while en route home from his annual European diamond buying trip.

H. S. Noyes, western representative for Bates & Bacon, is spending a couple of weeks at the factory of the company at Attleboro, Mass. Mr. Noyes will visit his old home at Newburyport, Mass., while in the east.

H. C. Tripp has closed out his business at Sabula, Ia., and removed to Binghamton, N. Y., his old home, where he will assume charge of his father's business, as the elder Mr. Tripp is about to retire from active business life.

Chas. Norton, with the Hiram B. Shellito Co., Sault Ste. Marie, Mich., spent a portion of last week looking over various lines in this city. Mr. Norton will visit his old home at Waterloo, Ia., before returning to Sault Ste. Marie.

Sproehnle & Co. have secured the room adjoining their present quarters in the Stewart building. The additional space fronts on Washington St. and will greatly facilitate the conduct of their rapidly growing business.

Mr. Hyman, of Hirsh & Hyman, New York, called on the local trade last week, accompanied by Milton Newitter, whom he introduced to the local trade. Mr. Newitter will be the firm's western representative during Mr. Hyman's trip abroad.

Among the buyers in town the past week, not elsewhere mentioned, were: A. D. Whitmore, Sun Prairie, Wis.; J. A. Seekatz, Hoopeston, Ill.; W. C. Osmon, Marshalltown, Ill.; C. W. Bristol, Napierville, Ill.; W. F. Burkhardt, Sibley, Ill.; W. R. Smith, Lake Geneva, Ill.

B. C. Allen, son of Benj. Allen, of Benj. Allen & Co., and Miss Blanche Bundy were married Wednesday afternoon. The wedding took place at the home of the bride, 3338 Vernon Ave., this city. Mr. and Mrs. Allen are spending their honeymoon in the Bermuda Islands.

A. L. Sercomb, local manager for the International Silver Co.; J. K. Caldwell, representing factories "L," "K" and "B," of the same company, and George C. Meehan, in charge of the local office force of the company, returned in the early part of last week from an extended trip to the various factories of the company.

J. Losey, son of John R. Losey, of John R. Losey & Son, Plymouth, Ind., has formed a partnership with M. Beach, and will conduct a retail jewelry store at South Bend, Ind. Both members of the firm, which will be known as Beach & Losey, were in this city last week buying their stock. Both are practical watchmakers and opticians and their friends in the local trade wish them success.

When Dr. Adolph Lorenz, the noted Vienese physician, visited this city six months ago he performed an operation to set the dislocated hips of Bettie Hoyt, the six-year-old granddaughter of Benjamin Allen, of Benj. Allen & Co. During his return visit to this city last week he removed the plaster cast with which he encased the limb after the operation and found that his efforts to relieve the child of her congenital deformity had been successful.

Fred Sheridan, western representative

for Arnold & Steere, has returned from his trip to the factory of the company at Providence, R. I.

"Ed." Staehli, of Brun & Staehli, who has been abroad for three months, has returned with a very fine line of Swiss watches.

The transfer of the property at 5519 Princeton Ave., 175¾x125¾ feet, with an incumbrance of $3,000, from C. E. Penfield to Bernard J. Hagamann, in consideration of $5,500, was filed for record last week.

Howard Rowbotham, western representative for the Untermeyer-Robbins Co., has secured quarters on the fourth floor of the Columbus building. Mr. Rowbotham has taken a house at Kenwood, into which he will move his family about May 1.

Percy Eppenstein, member of the firm of A. Davis & Co., and son of M. C. Eppenstein, president of tne Illinois Watch Case Co., and Miss Elsa M. Radzinski will be married this evening at six o'clock. The wedding, which will be an elaborate affair, will take place at the Lakeside Club, Dr. Emil G. Hirsch officiating. After the ceremony the young couple will leave for an extended trip through the south.

Detroit.

J. A. Konetzka, of the Konetzka Jewelry Co., North Baltimore, O., was a visitor to the wholsale market in this city last week.

Fred Flaschmann, who recently opened a jewelry store at 828 Gratiot Ave., was confined to a dark room for two weeks because of an injury to his right eye.

Frank Johns, formerly with the manufacturing department of R. S. & J. D. Patterson, Port Huron, Mich., has secured a position with Wright, Kay & Co., of this city.

Herman Jahn and Eugene T. Bernart, executors of the will of the late Eugene Deimel, have filed a bill of complaint and commenced foreclosure proceedings against William J. St. Aubin, Gertrude A. St. Aubin *et al* on a $11,000 promissory note and mortgage.

The bill introduced at Lansing by Rep. Duncan at the solicitation of the Michigan Retail Jewelers' Association, providing that all articles of jewelry resembling gold shall be properly stamped, is meeting with vigorous opposition from department store proprietors in Detroit and Grand Rapids. Some of the local retail and wholesale jewelers are also opposing it on the ground that such a law would drive trade to Chicago. Attention is pointed to the fact that manufacturers would decline to comply with the law and that Michigan retail jewelers would be embarrassed for lack of goods. A manufacturer of watch cases wrote a letter to the Lansing solons declaring that the passage of the bill would have the opposite effect from that desired, saying it would put many retail jewelers in Michigan out of business. The Detroit delegation to the Legislature is divided over this measure.

W. E. Zimmerman, in the Court of Justice Reuter, Peoria, Ill., last week, gave $200 bail to appear in the same Court to answer a charge of obtaining a watch from Henry Meyer, a jeweler, under false pretences. The watch, which was valued at $18, was sold to Zimmcrman on the instalment plan. He paid $3 on the watch and then pawned it.

Kansas City.

TRADE CONDITIONS.

Since the end of Lent, retailers report that there has been an appreciable increase in trade, but the weather suddenly turned cooler within the last few days, and this has had a marked tendency to lessen it. Manufacturers still report business very good, with a distinct scarcity of help. Everyone is looking forward to a good Spring business.

Archie Barringer, formerly with the C. B. Norton Jewelry Co., is now with the Meyer Jewelry Co.

A. Witt, watchmaker, formerly with E. B. Griswell, New Orleans, La., is now with the Jaccard Jewelry Co.

Walter M. Jaccard was recently interviewed on the question of diamonds and furnished some interesting data to the local press.

D. B. Ware, with Woodstock, Hoefer & Co., has returned to his post after his California trip to attend the funeral of his father, who died recently.

Leslie White, Lee's Summit, Mo., announces that in the robbery of his safe, as reported last week, only money was taken, no jewelry having been secured.

Mr. Raphael, of the Streicher Watch and Jewelry Co., was taken suddenly ill recently, and on that account has been forced to postpone his trip to the east.

J. R. Mercer has given to each one of the special field agents of the Humane Society a silver star on which is inscribed, in blue enamel, the words, "Humane Officer."

Geo. Esslinger, Lexington, Ill., is visiting his relatives here. Mr. Esslinger's father was one of the pioneer jewelers of this city, having been engaged in business here as early as 1849.

Sam Ewan, with the C. B. Norton Jewelry Co., was married recently to Miss Pearl Kilgore. The happy couple will take a flying trip to Ft. Smith, Ark., where they will spend their honeymoon, and on their return they will be "at home" at 1202 Olive St.

The following out-of-town merchants visited Kansas City during the past week: G. B. Douglas, Pleasant Hill, Mo.; J. W. Phillips, Chanute, Kan.; C. Bass, Huntsville, Mo.; J. U. Linville, Lowry City, Mo.; Chas. Blattner, of Blattner & Glick, Junction City, Kan.; Otto Burkland, Ossawatomie, Kan.; J. C. Haupt, Peabody, Kan.; Walter Sperling, Seneca, Kan., and Geo. Essig, Plattsburg, Mo.

It has now been definitely decided that the smelting plant in Argentine is to be permanently abandoned and the buildings razed. The land will be sold and also the machinery. The plant was closed about a year ago, after having been absorbed by the combination of the smelting companies, which have discovered that they have ample facilities without it. The Argentine plant formerly did a very large business and employed a great many men.

St. Louis.

TRADE CONDITIONS.

Business was excellent with the wholesale jewelers, last week. While few out-of-town jewelers were in to buy direct, orders from traveling salesmen have been of good size. Retail business was better, last week, than the week preceding, but not as active as it should have been.

Geo. R. Stumpf, Ed Pfeiffer and John Bolland were on a special jury last week.

T. H. Vinyard, De Soto, Mo., will shortly locate at Moberly, Mo., where he will form a partnership with G. W. Chase.

The craze for World's Fair spoons and novelties is growing. All the jewelers keep some sort of novelties, which they are selling in large numbers.

Ed. Vail, of Edward Vail & Co., Wichita, Kan., was in this city last week en route to his home, after a sojourn at Hot Springs, Ark. He is accompanied by his wife.

The assets of the Bauman-Massa Jewelry Co., which recently increased its capital stock from $60,000 to $200,000, are $250,372.79, and the liabilities are $181,186.08.

Goodman King, of the Mermod & Jaccard Jewelry Co., will leave in a few days for Japan and the Orient and will be gone for some time. Quite a number of commissions for rubies, pearls, emeralds, sapphires, bric-à-brac and art wares have been entrusted to him.

Minneapolis and St. Paul.

There is a good demand for watchmakers in the Twin Cities.

S. B. Abeles, Minneapolis, who is closing out, has been conducting a grab sale.

Louis Gaus, with the H. E. Murdock Jewelry Co., Minneapolis, has just returned from his regular trip.

Henry Birckendorf, formerly watchmaker for Frank C. Worrell, is now with Simon Gittelson, Minneapolis.

N. Waldron, formerly with R. B. Wegner, St. Paul, has gone on the road for the H. E. Murdock Jewelry Co., Minneapolis.

Frank Newcomb, with S. H. Clausin & Co., Minneapolis, has returned from a trip to the copper country of northern Michigan.

William Marks, proprietor of a store on E. 3d St., St. Paul, was recently arrested on a warrant sworn out on the complaint of E. S. Woodward, Cumberland, Wis., who says he was assaulted in the store.

The Republic Jewelry Store, Seattle, Wash., recently sustained a small loss by fire. The loss is fully covered by insurance.

Illinois College of Engraving,
Dept. A, No 1010 Masonic Temple, CHICAGO.
A. J. Clow, Proprietor.

San Francisco.

TRADE CONDITIONS.

Wholesalers report that trade has been unusually brisk on staple articles in the silverware line, but that with the luxuries it has been very quiet. Several report that there never was such a quietus at this season of the year. The trade with the retailers is daily becoming more active and the present outlook portends a continuation of active trade during the tourist season.

Chas. A. Noack, Sacramento, Cal., was here last week making purchases.

Niels L. Hansen, located at 1201 Market St., has opened another store a few doors above his present location.

Ehrenberg & Wurkheim have refitted and remodeled their present quarters and are now very comfortably situated.

Geo. C. Wilkins, Red Bluff, Cal., was in San Francisco for a few days last week laying in a new supply of jewelry.

R. S. Fulford, with Brittain & Co., has just returned from a two weeks' vacation spent at Los Angeles and Tulare, Cal.

Radke & Co. are making up a unique pin for the "Native Daughters," for the beauty and style of which they received a prize.

Shreve & Co. will hereafter give the employes in their shops a half holiday on Saturdays without any reduction in their pay.

The retail jewelry clerks of this city have issued invitations to their first annual entertainment and dance to be held to-morrow at Union Sq. hall.

L. E. Price, with Greenzweig & Co., has just returned from a very successful trip to the southern part of the State. He will shortly set out on a northern trip.

The Nathan-Dohrmann Co. is making a big window display of statuary chandeliers which is attracting considerable attention on account of its artistic arrangement.

W. Keller, head watchmaker for Radke & Co., has proven himself a star bowler. In a recent match of five games with some of the crack players he averaged 170 points.

It is reported that Anderson Bros. have purchased the stock and fixtures of Herman C. Hotfilter, Sacramento, Cal., Mr. Hotfilter having retired from business on account of ill health.

The branch of the Baldwin Jewelry Co. at 225 Sutter St. advertises the selling out of the entire stock and removal from the present quarters, as the place has been sublet.

A bill has passed the Legislature and become a law which provides that debtors be compelled to give creditors five days' notice of any sale. This news was received with much gratification by local merchants.

A. T. Lipman and H. H. Allen, of the Morgan & Allen Co., will return from their extended business trips next week.

Fritz Hadenfeldt, former bookkeeper for Henry Wolff, who had to abandon his position on account of failing eyesight, is now rapidly regaining the use of his eyes.

One of the features of last week's real estate business in the direction of private sales was the transaction by which the Levison Block on Sutter St., in which the California Jewelry Co. has its office, was sold subject to the approval of H. B. Kellogg, trustee for the owners, for the sum of $365,000. The W. K. Vanderslice Co., Nathan-Dohrmann Co., Nordman Bros., Rothschild & Hadenfeldt and the Morgan & Allen Co. are also located in this building.

The friends and relatives of Arnold Sohr, the jewelry salesman of this city, who recently dropped out of sight so mysteriously, have been advised that he made every preparation for a lengthy trip before his departure. He told his bride of three months that he was going to Oakland to sell a bill of diamonds. But it now develops that he secured about $600 worth of gems from William Wolfsohn at 622 Merchant St., which he failed to return, and that he drew $3,000 in cash which he had on deposit in a local bank.

Pacific Northwest.

TRADE CONDITIONS.

Spring trade is opening up encouragingly. April is usually considered the lightest month of all, but this year Pacific northwest business seems to be more advanced than usual. A large number of strangers are in Portland, Ore., and of course the jewelers find an increase in their souvenir departments. Watches of the better grade are still in great demand.

Threatened strikes among the carpenters and painters have delayed the work of putting in the new store front for Jaeger Bros., Portland, Ore.

The sword to be presented to Rear Ad-

No More Guessing
No Figuring to Do.

Use the

MOE Diamond Weight Gauge and Calculator

to determine the weight of stones while in the mounting. The gauge measures the diameter and depth, and by referring those two measurements to the book of tables that accompanies each gauge, the correct weight is shown. The book has 26 tables, showing weight of 1,700 diamonds from ¼ to 7⅝ carats inclusive. By its use you avoid chipping stones through removal from settings to weigh and save trouble and expense.

Gauge and book sent to any address; prepaid $5.00. Send for descriptive booklet and testimonials.

miral Clark, of the U. S. S. *Oregon,* has been received and is on exhibition in the store of A. & C. Feldenheimer, Portland, through whom it was ordered. The handle is of solid gold and the scabbard of silver, ornamented with gold.

G. G. Granger, Tacoma, Wash., has opened a store at Hope, Idaho.

A. H. Mitchell, of Challoner & Mitchell, Victoria, B. C., is now on a business tour in Europe. He has written home that he has just purchased the firm's supply of gems for the year. The firm will display many new novelties in jewelry during the coming season.

Pacific Coast Notes.

G. L. Schneider, Redding, Cal., recently visited his old friends in Stockton, Cal.

William E. Larson, Truckee, formerly of Auburn, Cal., visited relatives in the latter city last week.

Fire recently destroyed the store of J. J. Wilson, Dunsmuir, Cal. The loss amounts to about $6,000.

Newton Moore, the new manager of the establishment of Charles Adams, Riverside, Cal., has arrived from Los Angeles and is now on duty.

A good opening is reported in Mexico for the manufacture of silverware on a large scale. As one of the chief silver producing countries of the world, this should be a good field. Skilled artisans in this line of work would be one of the first requirements.

E. J. Pierpont, Phoenix, Ariz., accompanied by his wife and daughter, left last week for Naugatuck, Conn., where he will reenter the jewelry business with his brother, with whom he was associated before he left for the west. J. S. Baker, Riverside, Cal., who arrived at Phoenix a few days ago, will succeed Mr. Pierpont as manager of the Phoenix store of George H. Cook & Co.

Mrs. Harry F. Friedlander, sister of Isaac H. Herold, a jeweler of Oakland, Cal., disappeared April 8 from the steamer *Arctic* on the southern coast of Humboldt County, Cal., on the trip from San Francisco to Eureka. The case is said to be one of suicide and is believed to have been the ending of a hasty marriage at Reno, Nev., in opposition to strong protests from Mrs. Friedlander's relatives. Mrs. Friedlander, who was Miss Bessie Herold, of Kingston, N. Y., came out a few months ago to visit relatives in East Oakland, and during that time became acquainted with Mr. Friedlander. She recently inherited $40,000 from her father.

Cincinnati.

Wm. Thelan, son of Benj. Thelan, 624 W. 5th St., died last week.

J. G. Reeves, of Gebhardt Bros., is on a trip through Ohio and Michigan.

Arthur C. Jacobs, son of D. Jacobs, will represent D. Jacobs & Co. on the road this week.

Nat Barton, of the Ostby & Barton Co., was in Cincinnati last week calling on old friends in the trade.

J. C. Becker, Cincinnati agent for the Philadelphia Watch Case Co., has moved into more commodious quarters in Room 42 of the Carew building.

Chas. Hofman, Springfield, O., was in town last week to attend the opening of the base ball season and to buy his Summer stock.

Will Pryor, formerly with A. G. Schwab & Bro., is now a broker in diamonds, and makes his headquarters with Jos. Noterman & Co.

Lee Loeb, of Herman & Loeb, who has returned from an extensive trip through the west, reports the outlook for a good year is very promising.

A. G. Schwab has gone East on a business and pleasure trip. Louis Lang, his son-in-law, will join him at New York this week, and together they will go to Boston and the manufacturing cities of the east.

Jos. A. Henocksberg has returned from a four-months' trip to the Pacific coast. Mr. H. has just moved into his new and handsome home on Walnut Hills, and has fitted up therein an office which is to be his future headquarters.

Edward Oelker, 42 Emery Arcade, who won several thousand dollars in the Commercial guessing contest over the election figures last Fall, has won $1,000 in the recent contest over the figures of the city election. He won the third premium.

The engagement of Edward Herschede, son of Frank Herschede, to Miss Lilian Noble, daughter of Prof. Thomas Noble, of Walnut Hills, is announced, and the wedding will be one of the notable social events of next Fall. Mr. Herschede is connected with the jewelry house founded by his father.

D. Jacobs & Co. last week received some of the goods stolen by the thief who smashed their window recently and got away with several watches, rings and fobs. One of the detectives on the case brought back to the firm some cases which had been part of the booty. The cases when found had no movements in them. None of the other goods was found, nor was any clue to the thieves discovered.

H. M. Bohmer was tendered a banquet Thursday night by the Friendship Club of the East End upon his moving from the East End to Walnut Hills. About 50 were present, and the toasts were numerous and lively. A beautiful menu of several pages with the picture of Mr. Bohmer on the front cover, were the souvenirs of the occasion. Mr. Bohmer was also presented by the members of the club with an elegant china closet, as a memento of their esteem.

MONEY IS NO GOOD UNLESS IT EARNS MONEY.

Goods bought right are half sold. Our competitors are trying to drive us out of business by telling the manufacturers and importers not to sell us any goods as we are price cutters. **Yes, we do cut prices.** Here are some instances:

Our Peerless Brand all size watch screw drivers N. P., **5c.** each.
Elgin, Waltham, Hampden or any other make 7J. Grade Balance Staffs, **75c.** doz.
Same, fine polished for 15—17 and 21 J., **$1.00** per doz
Peerless Brand Cock and Foot Jewels for all makes, **$1.00** per doz.
Peerless Roller Jewels for all make watches, **20c.** per doz.
Peerless Pivot Drills, **20c.** per doz
Fine Alum. Straight or Riding Temple any size Eye Frames, **$1.75** per doz.
Same in Cable, **$3.00** per doz.

Above staffs and jewels are guaranteed to fit. Not any cheap imitation goods. Above prices are net cash with order. Money refunded if not satisfactory. Write for our confidential discount on general line. Watch for our low prices every month in this paper. Mail all orders to

CINCINNATI - - - OHIO.

Cleveland.

TRADE CONDITIONS.

Cleveland jewelers report business very good for this time of year and expect it to equal the trade of last year. The wholesale houses report that their men are taking large orders and that collections are fully up to the average.

Mr. Vazard, of G. M. Salkeld & Co., Perry, O., was in this city Friday.

W. R. Hay, Sharon, Pa., spent several days in this city last week buying goods.

The store of Edward Klein, 1416 Woodland Ave., was closed last week under an execution.

W. W. Wells, Lodi, O., was in Cleveland several days last week on business and pleasure combined.

It is reported that F. H. Kramer, 381 Erie St., has secured a 99-year lease of the property at 339 Prospect St.

Mr. Smith, son of Walter G. Smith, Youngstown, O., called on some of the wholesale houses in this city last week.

Arnstine Bros. & Mier report that their traveler, Ralph E. Coen, lost about $20 by the robbery of his trunk at Superior, Wis., recently and not several hundred, as published.

The Wingate-Nusbaum Co. has a portion of its stock in place in the new store. As the concern has been delayed in getting it in place, it will probably be a week or two before it is ready for business.

Ben Sands, a jeweler at 130 Euclid Ave., and his wife were nearly asphyxiated by natural gas Sunday morning. They were discovered unconscious, but their lives were saved by the heroic work of four physicians.

The Cowell & Hubbard Co. is re-decorating the entire interior of its large store at 115 Euclid Ave. The color is a delicate light blue with a border of white figures about the top. This store is now considered one of the handsomest establishments in the country.

J. M. Jenks, vice-president of the Scribner & Loehr Co., who at present resides at Lancaster, Pa., was in the city a few days last week, looking over the company's new building, and making arrangements for the factory which will manufacture Masonic rings and emblems.

M. U. Basinger, formerly a member of the firm of Basinger & Cameron, Lima, O., was in this city last week and purchased a new stock for the handsome store which he will open in Lima about May 1. This store is situated at the N. E. corner of the public square in that town.

Benjamin V. Arnstine, of Arnstine Bros. & Mier, fell from a street car two weeks ago and broke his collar bone. His condition has improved so much that he is able to get down to business, but wears his arm in a sling. Harry W. Arnstine, who was called in by his brother's accident, will start out on a seven weeks' trip Monday.

The Scribner & Loehr Co., which took over the business formerly conducted under the firm name of Scribner & Loehr, has elected the following officers: President, Otto T. Loehr; vice-president, J. M. Jenks; secretary and treasurer, C. F. Keim; general manager, George W. Scribner. These gentlemen, with C. K. Merrill, make up the board of directors. The store will be moved into the new Merchandise building on Erie St. within a short time.

Columbus, O.

TRADE CONDITIONS.

Business among the local jewelers is rather quiet just now, though fairly steady. Repair work seems to be most active and keeps everybody busy.

The Bonnet & Ross Co. will move into new quarters at 77 N. High St. about May 1.

O. S. Hofman, president of the Hofman Jewelry Co., spent the past week in Chicago.

A number of claims for stock liability against former members of the old Columbus Watch Co. were sold at the Court House recently by A. W. Krumm, receiver for the company. The sale was made in order to close up the business of the old firm. One claim of $44,206 sold for 98 cents, and another for $48,299.77 went for $1. The total claims, amounting to $120,970.35, were sold for $617.23.

Indianapolis.

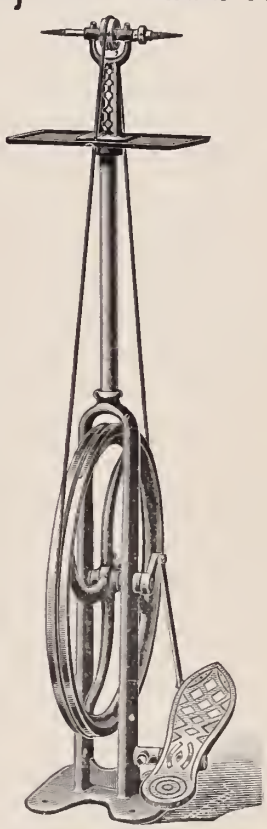
Horace D. Sherrill, of Sinnock & Sherrill, New York, visited the Indianapolis trade last week.

Recent buyers in this city included: Walter Bishop, Walton, Ind.; Geo. S. Drake, Pendleton, Ind.

Jos. E. Reagan visited Toledo and Bowling Green, O., last week in the interest of his firm, the Baldwin-Miller Co.

H. A. Comstock expects to spend the Summer in a camp on Fall Creek, about six miles north of the city, coming in to his business every morning.

D. J. Reagan left April 13 for a four weeks' trip through Illinois and Iowa in the interest of the Baldwin-Miller Co. This firm is preparing to put in a full line of high grade cut glass and sterling silverware.



Montana.

A. W. Tanner, Virginia City, has begun work again on his mines in Pole Creek and has made some exceptionally good finds of rubies and sapphires.

A serious robbery occurred on the night of April 9, when the store of the Great Falls Hardware Co., Great Falls, was entered by two burglars and watches and cutlery worth several hundred dollars were taken. Two men were arrested next day and all the stolen goods were recovered.

George Stenfel, of the English Sapphire Syndicate, which has been working the mines at Yogo, has been spending some weeks in the west. He states that the output from the mines for the past year was 200,000 carats, an increase of more than one-half over any other year. Mr. Stenfel is also interested heavily in South African diamond mines.

Quality Good—What Price?

Write to

The W. W. Oliver Manufacturing Co.,

1481 Niagara Street, BUFFALO, N. Y.

A large stock of Diamonds we have on hand,
A selection of which we will send on demand.
And let us assure you that *now* is your chance,
As our rates are the same as before the advance.
The last rise was only on newly mined rough,
And exempted the stock of ELIASSOF.

H. A. George, optician, Superior, Wis., is expected to arrive in California in a few days on a business and pleasure trip. Mr. George will probably locate permanently in Hanford, Cal.

The Kilton Optical Co. recently commenced business at 201-3 Schofield building, Cleveland, O. Mr. Kilton is a graduate of the McCormick Optical College, and has had 14 years' experience in the business.

A thief last week picked the lock of the show case in front of the store of Dr. J. O. Faris, optician, Danville, Ill., and secured a $10 telescope and a number of spectacle frames. A number of other optical articles were in the case, but the man was frightened away before securing them.

Z. F. Highsmith, Sumter, S. C., has recently moved into his new quarters over the Delorme drug store. He has two front offices, one a testing room and the other a reception room. He has also bought out the entire optical stock and fixtures of E. A. Bultmen, a jeweler of that place.

C. M. Scammel, traveling representative of the Johnston Optical Co., Detroit, Mich., last week entertained several members of the Ohio Optical Association at the Neil House, where he demonstrated a number of advantages claimed for the new instrument manufactured by his company for detecting and correcting errors of refraction.

Dr. J. A. Currie, optician, Philadelphia, Pa., with his wife and daughter, will sail abroad May 2, on the Anchor line steamer *Columbia*. Mrs. Currie and daughter will spend much of their time at the seaside residence of her son, who is a member of the Belfast Stock Exchange and has his residence at Bangor. They will return about Sept. 1.

The eighth annual meeting of the Central New York Optical Society, will be held to-night in Syracuse, N. Y., at room 111 University building. There will be a business session from 7 to 8 P. M., followed by an address by J. Spencer Purdy, M.D., president of the Seneca County Medical Association, on "The Relation of Opticians to Physicians."

The California Association of Opticians recently held its regular quarterly meeting in the California Hotel, San Francisco, Cal. Representatives attended from Los Angeles, Sacramento, Santa Rosa, Merced, Santa Cruz, San Jose and Oakland. Twenty new applications for membership were received, largely as a result, it is believed, of the passage of the bill creating a State Board of Optometry. The principal lecturers were Chas. H. Wood, Oakland, and Dr. H. E. Banks, San Francisco.

Secretary C. A. Longstreth, of the Optical Society of the State of Pennsylvania, announces that a bill entitled "An Act to Define and Regulate the Practice of Optometry in the State of Pennsylvania," introduced into the State Legislature at Harrisburg March 2, and favorably reported on by the committee, was killed at the close of the session.

Omaha.

B. P. Weir, Horton, Kan., is visiting old friends in this city.

M. L. Kile, Creighton, was in this city last week replenishing his stock.

P. E. Flodman, of Peter E. Flodman & Co., has returned from an eastern trip.

G. W. Goldsberry, Leigh, and G. H. Morgan, Loup City, are advertising for sale their jewelry stocks.

Wm. Fritcher, watchmaker for H. M. Leffert, Council Bluffs, Ia., carried off several prizes in the recent bowlers' tournament held in Lincoln, Neb.

Abraham Mandelberg furnished the handsome prize locket for two camps of the Woodmen of the World. It is of solid gold, in the shape of a tree stump with the letters "W. O. W." set in diamonds.

Henry Copley has been given the contract to look after the clock in the federal building this year. It is hoped that with a practical man in charge some of the idiosyncrasies of this public clock may be overcome. Heretofore it has been a source of discomfort and vexation to the public, and one could never depend upon it for accuracy. The clock was built by an amateur instead of a professional, and it is said that trouble has been experienced ever since it was put in place.

Harrisburg, Pa.

Trading stamp concerns are well pleased over the failure of the State Legislature to pass the bill to abolish trading stamps. The House shortly before adjournment defeated the Weaver trading stamp bill by a vote of 101 to 32. The same body defeated the Senate bill providing for and regulating the mode of redemption of trading stamps, coupon tickets and similar devices, while the House bill, making it unlawful to sell merchandise bearing or carrying with it any tag, stamp or coupon entitling the purchaser to demand articles of value in exchange for such stamps, etc., was defeated in the Senate.

Gov. Pennypacker was in Philadelphia Saturday, and in company with his fellow commissioners, Senators Quay and Penrose, examined two sets of designs submitted by Philadelphia firms for the magnificent silver service to be presented by the State to the new battleship *Pennsylvania*, now building at Cramps's shipyard, and for which purpose the last Legislature appropriated $25,000. The designs covered the walls of two rooms at the quarters of the Historical Society of Pennsylvania. There will be about 200 pieces of silverware. Several hours were spent in this examination, but the commissioners reached no decision.

Baltimore.

Eugene Case and Arthur Wilson, both colored, are held for the larceny of a gold-filled watch.

The glass works of William King & Bros. was closed down last week, throwing out of employment about 50 men. A new blowing machine is to be tried to see with what success it will meet.

The show window in William F. Bissings' store was looted Wednesday morning in an unusually bold manner. The thief wrapped a cobble stone in old paper to deaden the sound and with it smashed a $20 plate glass window, and after securing three boxes of silver spoons, escaped. An officer not far away heard the smash, but caught no glimpse of the man.

The Norfolk, Va., officials will not allow E. M. Martin to be brought here to answer to the charge of looting the residence of Conrad Klank, of C. Klank & Sons, as he is held there for four charges of burglary. Several Norfolk detectives were in Baltimore last week looking up some of the silverware that was stolen in Norfolk. A great deal was identified and taken back as evidence.

The clocks of the electric system just installed in the new court house were set running last week, and when completed, there will be 50 timepieces in the big building. Each court room clock will have a 30-inch dial. The whole system will be controlled by a large master clock in the Marshal's office. There are only two other systems like it in the city and these are in the City Hall and in the Commonwealth Bank. The clocks came from the Standard Electric Time Co., Waterbury, Conn., and were ordered by George Walter.

The numerous conventions that are to be held in Baltimore the coming Summer will prove a boon to the badge manufacturers. As is customary, each of these conventions will require a great number of emblems, most of which will likely be gotten out by local concerns, though all seem greatly burdened with work. The committee of badges of the Benevolent and Protective Order of Elks have been working on a plan to make the insignia to be worn during the reunion in June one of the features of the event, and a number of costly designs have been contracted for. The contracts were let to the Minks Badge and Novelty Co., Baltimore, and to Heeren Bros. & Co., Pittsburgh, Pa.

Savannah, Ga.

Joseph Bock, Charleston, S. C., died recently.

S. E. Theus, of Theus & Co., has been elected a director of the Retail Merchants' Association.

George R. Youmans was recently elected a director and president of the Bank of Waycross, Ga.

Leopold Adler has been elected a director and president of the Retail Merchants' Association.

A. L. Desbouillons is selling out his stock at auction in anticipation of his removal to another store, the exact location of which he has not yet decided upon. The block in which he is now located was bought by the National Bank of Savannah recently, and will soon be occupied by a 10-story building.

To the Trade.

THE copartnership of Potter & Buffinton, having terminated by the death of Col Isaac M. Potter, the property, business, etc., of the firm have been transferred to the Potter & Buffinton Company, a corporation incorporated under the laws of the State of Rhode Island, and the high standard maintained by that firm for so many years in the jewelry trade will be sustained by the corporation.

The officers are John M. Buffinton, of the old firm, President and Treasurer; Reuben Mason, for 34 years in charge of the New York office of the firm, Vice-President; Edgar A. Woodmancy, for 30 years with the old firm in charge of its books, etc., Secretary.

The corporation will continue the factory and office at No. 7 Eddy Street, Providence, R. I., and Mr. Mason will remain in charge of the New York office at 65 Nassau Street.

All debts due to the old firm are payable to the Potter & Buffinton Company.

Thanking you for favors to the old firm for so many years, and soliciting your future patronage,

We are,

Very respectfully yours,

POTTER & BUFFINTON COMPANY.

Mark the Difference.

While other manufacturers sell to the MIDDLEMAN, we sell direct to the RETAILER, giving him the benefit of the difference.

The Bassett Jewelry Co.,

Manufacturers' Building

PROVIDENCE, R. I.

Pittsburgh.

TRADE CONDITIONS.

Wet days in Pittsburgh are business killers and the rain of the last week seriously interfered with all branches of trade, the jewelers sharing the common fate of the other business men. Spring weddings have caused some handsome sales of cut glass and silver goods, but the trade in novelties and the regular line of jewelry is quiet. Representatives of the Pittsburgh wholesale houses and salesmen from the eastern houses who have visited the city say that the retailers are buying well and expect better trade in the near future.

Mrs. John Aul, the mother of George Aul, bookkeeper for Geo. B. Barrett & Co., died last week.

The Silvermann Jewelry Co., formerly at 709 Penn Ave., is now occupying its new room at 705 Penn Ave.

The Wallace Optical Co. has moved from its old establishment at 624 Penn Ave. to a new room at 636 Penn Ave.

M. Morganstern, with Emanuel Grafner & Co., is covering his northern Pennsylvania and southern New York territory.

H. H. Weylman, a Kittanning jeweler, was in Pittsburgh Thursday en route to his home from the south, where he has been spending several weeks.

Mrs. B. E. Arons, with her daughter and son, left last week for New York, where they will remain until the middle of May visiting friends. Mr. Arons will meet them in Buffalo then and accompany them to their Summer home at Angola, N. Y., where Mrs. Arons and her children will remain during the Summer.

Gillespie Bros. have added more space to their sales rooms in the Park building. A room adjoining their present quarters has been secured, the partition removed and the space devoted to the display of cut glass lines.

M. Tobin is opening a new jewelry store at 212 Smithfield St. Mr. Tobin recently acquired control of the Standard Jewelry Co. of this city and will hereafter conduct both stores. Charles Mohr retires from the Standard Jewelry Co.

John P. Steinmann, who conducts a jewelry store at 417 Federal St., Allegheny, has opened an establishment in the new Farmers' Deposit Bank building. Mr. Steinmann still conducts his Allegheny store, but as his lease there expires next Spring he has secured the new location to protect himself in case he could not renew it.

C. C. Will, a veteran jeweler who was for many years in business on Smithfield St., this city, but who now resides in West Alexandria, was the guest of his son, Edward H. Wills, last week. While here Mr. Will was summoned home suddenly on account of the serious illness of his youngest son, Harry, who was stricken with congestion of the brain while in the company of a number of his friends.

Among the retail jewelers who were in the city during the last week were: John Linnenbrink, Rochester; D. L. Cleeland, Butler; John Zewe, Duquesne; A. A. McFarland, Burgettstown; Mr. Roy, of Roy & Anderson, Braddock; Thomas H. McNary, Washington, and Frank Worrell, Canonsburg; R. J. Adelson, formerly of S. Davis & Co., is now employed as bookkeeper by Emanuel Grafner & Co., Penn Ave.

M. J. Smit, 212 Fifth Ave., will begin May 15 the erection of one of the most modern jewelry buildings in the country. The building will be upon the site now occupied by Mr. Smit and will be of stone and five stories high. When completed the entire building will be occupied by his jewelry establishment. Each floor will contain but one large display and sales room. Upon moving into his new establishment Mr. Smit will add a collection of bric-à-brac and bronzes to the lines he now carries, and a special factory will be fitted up for the manufacture of the staple lines of jewelry. The plans for the edifice have been completed and Mr. Smit expects to be in the establishment by Sept. 1. While the building is being erected he will conduct business on the second floor of the Marvin building.

ESTABLISHED 1856.

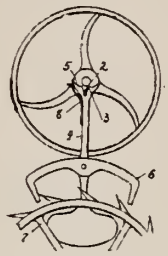
PROVIDENCE, R. I.

Silver Service May Be Presented To United States Cruiser Des Moines.

DES MOINES, Ia., April 15.—It has been practically decided that the city of Des Moines will present a silver service to the United States cruiser of the same name, soon to be put in service. President D. B. Lyons, of the Commercial Exchange, and Mayor Brenton will probably arrange the matter this week.

M. A. Lumbard, of 401 Locust St., and T. L. Rogg, 418 Walnut St., are among the jewelers who are endeavoring to obtain the order for the service.

Importations at the Port of New York.



Weeks Ended April 18, 1902, *and April* 17, 1903.

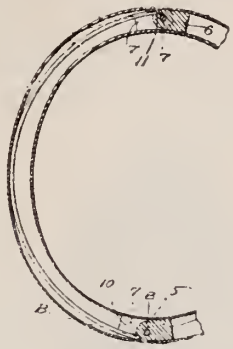
John Robertson, at one time engaged in business in Morrison, Ill., but now established in Colorado Springs, Col., was visiting old friends in the former town last week.

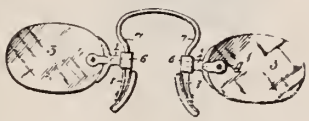
The Latest Patents.

ISSUE OF APRIL 14, 1903.



725,037. BALANCE ESCAPEMENT. Edward Buysse, South Bend, Ind. Filed Sept. 3, 1902. Serial No. 121,981. (No model.)

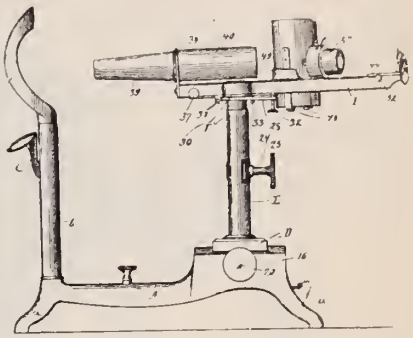
The combination with the balance-wheel, provided with a roller-jewel, and the pallet-lever, of a catch-spring on the pallet-lever arranged to engage and hold the roller-jewel when dislodged from the lever.



725,322. BRACELET OR THE LIKE. Edward P. Davis, Wrentham, Mass., assignor to Whiting & Davis, Wrentham, Mass. Filed Sept. 27, 1902. Serial No. 125,029. (No model.)

In a bracelet or the like, comprising a plurality of hinged sections, a spring located in one of the hinged sections and arranged to exert force in a line substantially perpendicular to a section of the bracelet at the point of hinging, the said spring having its operative end bearing upon the other hinge member in such a point that the line of the force exerted by the spring will pass on one side of the hinge-pin when the said hinge is open and

on the other side thereof when the said hinge is closed.



725,478. SPRING AND GUARD LOCK FOR EYEGLASSES. Harry S. Peters, Alle-

gheny, Pa., assignor of one-half to David W. Brobeck, Allegheny, Pa. Filed Nov. 12, 1902. Serial No. 130,988. (No model.)

A spring and guard lock for eyeglasses, comprising a post carrying straps on one end to receive the eyeglass, and a box on its other end, said post having an opening therethrough, a sleeve fitted in said opening and having a head to lie within the box, and a screw inserted into the post from the strap end of the latter and engaging in the sleeve.

725,483. OPHTHALMOSCOPE. Seth A. Rhodes, Chicago, Ill. Filed Sept. 15, 1902. Serial No. 123,424. (No model.)

In ophthalmoscopes, a suitable frame, an object-lens and a mirror having a peep-hole mounted on said frame in opposed relation, a light-screen mounted on said frame to one side of the line of said mirror and object-lens and a shade for said lens.

725,585. BADGE. Frederick W. Pollock, Kirkville, Mo. Filed June 19, 1902. Serial No. 112,379. (No model.)

A badge comprising a frame having one or more apertures in its face, a plate disposed slidably in

"As true as a Die."

How true IS a Die?

Whether die cutting is absolutely true or not depends on the PROCESS. A die cut by hand is necessarily imperfect,—even the most skilled hand and eye cannot work with absolute, unerring certainty. The

Automatic Die Cutting Machine

can and does—with MATHEMATICAL PRECISION. Moreover, it cuts fine dies in ONE-THIRD the time required by hand—saving wages and trebling capacity. And it finishes the die or hub WITHOUT RETOUCHING—the ONLY MACHINE that can do this. Adapted to large and small dies. Every machine guaranteed. All purchasers protected.

said frame and covering said apertures, spaced guides to said plate extending from the interior of said frame and formed into hooks, a projection from the rear of said plate, a spring engaging said hook-guides and said projection and adapted

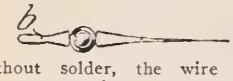
to exert its force to maintain said plate yieldably at one end of its movement, means operative outside frame for actuating said plate, characters or representations of objects upon said plate which appear to view opposite said apertures only when said plate is at one end of its movement, and independent characters or representations of objects which will appear to view through said apertures only when said plate is at the other end of its movement.

DESIGN **36,283.** TEETHING-RING. CLEVELAND A. DUNN, New York, N. Y., assignor to

Graff, Washbourne & Dunn, New York, N. Y. Filed Oct. 24, 1902. Serial No. 128,671. Term of patent 7 years.

DESIGN **36,284.** HANDLE FOR SPOONS, FORKS, OR SIMILAR ARTICLES. JOHN

CLULEE, Wallingford, Conn., assignor to the International Silver Co., Meriden, Conn. Filed March 13, 1903. Serial No. 147,678. Term of patent 7 years.



ENGLISH PATENTS.

(ABRIDGEMENTS OF SPECIFICATIONS, 1901, FROM *The Illustrated Official Journal.*)

ISSUE OF APRIL 1, 1903.

24,945. JEWELRY SETTINGS. L. ESSLINGER, Pforzheim, Germany. Dec. 6.

Settings of jeweled pins, brooches, etc., are at-

tached without solder, the wire being passed through an eye swaged on the back of the setting, or through the space between the back of the setting and the stone or other ornament, and the wire flattened on either side of the setting as indicated at *b*, and the setting pressed tightly against the wire.

25,374. ELECTRIC CLOCKS. R. M. LOWNE, Ravenscroft, Southend Road, Catford, Kent. Dec. 12.

An ordinary pendulum is arranged to operate a rotating commutator switch which controls a divided electric circuit containing (1) an electromagnet by means of which impulses are given to the pendulum, and (2) one or more pairs of electromagnets actuating time-indicating devices, the arrangements being such that the current passes only during the exact time of performing the necessary work. Fig. 1 shows the pendulum apparatus and switch, and Fig. 2 the indicating-apparatus, according to one arrangement. The ordinary pendulum fork *a* carries an arm l^1, which lifts a lightly-weighted lever *l* bearing a ratchet

FIG. 1

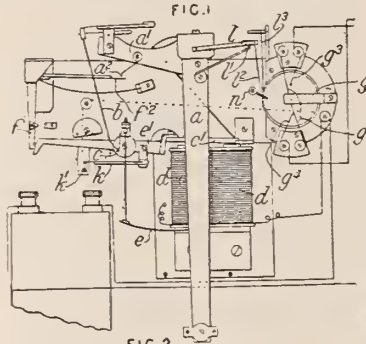


FIG. 3.

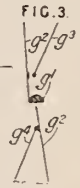

FIG. 2.

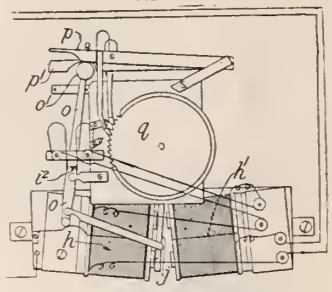

FIG. 7

click l^2, the movement of which is limited by a fixed spring click l^3 and a stop *n*. The fall of the lever *l* thus operates a ratchet-wheel on the spindle g^1, half of which is cut away as shown in Fig. 3, so as alternately to deflect and to release two spring arms g^2, which make electrical contact with fixed arms g^3, g^4. One or other of two electromagnets *h*, h^1, Fig. 2, is thus energized to operate the time-indicating device. Another electromagnet *d*, Fig. 1, is energized at the same time, to deflect a spring *e* by which impulses are imparted to the pendulum. The armature is held at one end in contact with the magnet by means of a rod and a spring. When the armature c^1 of the magnet *d* is attracted, the end of an extension arm e^1 attached to it is brought below a pivoted stop *f*, which retains it in its lowest position with the spring *e* deflected. A loose finger *b*, attached to an arm a^1 of the pendulum fork, then engages a projection *c* on the armature extension, while another finger a^2 on the same arm a^1 depresses an arm f^2, and thus moves the stop *f* out of the way. The armature being thus released the spring *e* raises it, and gives an impulse to the pendulum by means of the finger *b* and arm a^1. The finger *b* immediately escapes from the projection *c*, and does not engage it again until the armature is again depressed. Instead of this arrangement, the magnet *d* may act to wind up a spring or weight which actuates a train controlled by an ordinary escapement, and this train may operate the switch g^1, as well as maintain the pendulum in motion. The time-indicating device is operated by the magnets *h* and h^1 by means of a swinging armature *j*, which acts to oscillate a lever *o*. The end of this lever has rollers a^1 on which rest the curved ends of ratchet levers *p*, p^1, one of which rises as the other falls, so that the ratchet-wheel *q* progresses at each stroke of the lever *o*, and moves hands or other indicating-devices. The lever *o* also carries a make and break contact i^2, which puts the magnet which has just acted out of the circuit and puts the other one in. For large public clocks and the like, the magnets *h* and h^1 may work a relay for introducing a powerful current to actuate the indicating-mechanism. To prevent the indicator magnets from acting before the pendulum magnet *d*, the latter is made of greater resistance than the former, so that it acts while the others remain inoperative until, the armature c^1 being depressed, a short-circuit, excluding the magnet *d*, is made by the contact *k*, k^1. Curb pins for limiting the movements of levers are arranged as shown in Fig. 7, being attached to a loose plate which is held by a spring, against a fixed plate, so that there is only a frictional resistance capable of yielding to some extent.

Wage earners and all who are interested in insurance will do well to look into the policies issued by the Tradesmen's Life Insurance Company, 253 Broadway, New York. This company has always made the jewelry trade its special field, and on its board of directors are several men well known in the trade. The company issues several forms of policies designed to meet all demands, including life, accident and sick benefit policies. Other forms known as the Industrial, "Club Plan," "Ten, Fifteen and Twenty-Year Payment," are very popular.

Purchasers and Sellers of infringements will be prosecuted.

RETAIL MERCHANDISE

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan which they are utilizing in connection with their business.

PRIZE ESSAY COMPETITION, NO. 10.

SUBJECT:

"How to Develop a Watch and Watch-Repairing Department."

(*Continued from issue of April* 15.)

NO possibility of making a little extra profit, or chance to appear to undersell a competitor, should induce a jeweler to buy unreliable movements, 20-year filled cases that wear out in five, eight-karat cases stamped 10, or 15-dwt. cases that weigh 30 dwts. and over with the springs, and the like. As a rule a jeweler lives long enough if he remains in the business to reap more trouble than trade from sales of such frauds. Honest goods at honest prices may be a smaller sum in the beginning but it multiplies faster later on.

In the matter of style the jeweler must study the people of his locality and govern himself accordingly. In offering a watch for sale it is safe always before advancing an opinion to find if the prospective customer has any preferences. This may be done with a little tact. To expatiate on the superior merits of one make to a man who is strongly prejudiced in favor of another, or to sneer at a style as old fogy, bad taste or what not, only to find out that he has set his heart on just that particular kind, is a mistake. If it can be done honestly, recommend what a person prefers. It pleases and begets confidence.

Having gauged the people of his locality, the jeweler should carefully proportion his stock to accord, and keep it at the maximum warranted by his sales. It is better to replace a good seller at once than to let a customer find the stock incomplete.

New movements should be put in good running order and tested to see that they fit the cases as soon as received. It is embarrassing and detrimental to a jeweler's prestige, after selling a watch which he has been praising for half an hour, to have it develop a kink which prevents immediate delivery; yet this often happens. The customer is apt to wonder if he is going to have similar trouble and he is sure to be hypercritical over its performance when he gets it.

Cased watches and the tags on them should under no circumstances be allowed to remain soiled. Well made trays to protect them in the daily transfer to and from the safe are necessary, and the occasional expense of new trays is less than the loss of trade from soiled and frayed settings. New watches must look new to attract buyers, and they look more valuable if properly displayed. The jeweler should be thoroughly posted on the requirements of railroad companies and make himself popular with railroad men, for they rapidly develop trade for a man in whom they have confidence. The appointment as inspector of watches for some railroad company is valuable.

Price is the greatest difficulty. The public is well informed; it wants to buy at as near cost to the dealer as possible. From the prevailing habit among jewelers of telling people who have bought elsewhere that they could have sold them cheaper, the public has come to regard jewelers as a species of robber. Many do try to get unreasonable profits. Some sell one man at a profit which does not pay, and to get even overcharge another who is willing to be fair. These things do not develop trade. The man who bought too cheaply advertises a price which it does not pay to sell at; the other tells all his acquaintances that he has been robbed. A dealer should put a fair price on his watches and be able to convince his customers that they are worth it. If he has the reputation of telling the truth about his wares and the ability to make his guarantee good, the trade worth having will pay his price.

In selling, all talk of cost and profit should be avoided. The watch and the price should be kept intact in the customer's mind as things of equal value. Nor should the watch be sold in detail, but as a finished product guaranteed to be so and so. The fact that some one else has offered a similar watch for less should not destroy confidence. It is the confident stand that "this watch with my guarantee cannot be bought for less than the price asked and is worth it" which develops trade.

Good watches backed by a thorough knowledge of watches and the ability to keep them good can be sold with a profit and a certainty of increasing business. The most fatal error a jeweler can make is to talk against a competitor and his wares or to allow himself to be entered in competition. It is "my goods with my guarantee at my prices, all good and honest," which develops a watch trade. Advertisements should emphasize the reliability of the watches offered as timepieces, the quality of the cases, the responsibility of the dealer and the fairness of the prices; they should ignore competition and be backed by facts.

Complaints should be listened to with patience and careful consideration. If the watch sold is at fault it must be made right. If the trouble arises from the carelessness or ignorance of the owner, the matter can be satisfactorily explained with tact and good humor. People frequently expect impossibilities of the delicate mechanism because they do not understand it; enlighten them; few fail to respond to reason and an intelligent statement of facts.

The dealer should not lose all interest in a watch when it is sold. It is his standing advertisement to the buyer's friends and family. It is to his interest to have

Prize Essay Competition—No. 11.

Three prizes, $20, $10 and $5, will be given to writers of essays on the subject:

"How a Jeweler Can Profitably Conduct a Camera Department."

The prizes will be awarded to the writers of the best and most reasonable essays. The ideas expressed, rather than the language used, will be considered in making the awards. The essays will be lettered when received and the judges will not know the identity of the writers until after the decisions have been made.

At the request of several contestants in this competition who were obliged to abandon their writing during the Easter season, an extension will be given until April 29, when the contest will close. Write plainly and legibly and on one side of the paper only.

The right is reserved to publish any or all of the essays received. Only those connected with the trade are allowed to enter this competition.

NG and HINTS to JEWELERS

it a good advertisement. It pays to keep in close touch with every watch sold and the buyer of it even at the cost of time and patience. When the business has grown beyond one man's supervision, assistants should be taught to follow the same method.

A large timepiece prominently placed, with means, electrical or otherwise, for keeping it absolutely correct, is helpful. Some device similar to the falling of a ball, to mark the hour of 12, would draw people to the store and impress them. A jeweler should assume and force upon public attention in every possible way the idea that his store is the headquarters of time and timepieces. He should also make it so in fact.

A question which inevitably presents itself to the watch repairer for decision and which should be decided at once and for all time is, "Shall I take in all kinds of work at all kinds of prices, or shall I take only such as will pay enough to enable me to do good work?" Poor work will not develop trade, and poor prices will not pay the cost of good work. The winning plan is to charge fair prices for good work and be satisfied to let someone else butcher watches at the cost of doing it. There are plenty of 50-cent jobs which do dollars of harm to the watch repairer. But a good job, even if the customer squirms when he pays for it, will bring him back and others with him.

Though they may entail occasional loss, the following rules will win in the long run:

Do not accept a watch for repair which cannot be made to run right.

Having accepted a watch for repairs, make it run properly, even if it costs more to do so than the price agreed upon. If other watchmakers have failed, fix that watch at any cost.

Do not promise a watch earlier than it can be properly fixed—better lose the job; and do not return one until it is in good running order unless obliged to do so, and then only with a full explanation, which should be noted also on the book of record.

Do not charge for fictitious labor. One fraud of this kind found out will do more damage than the amount made by 50 undiscovered stealings.

Do no unauthorized work, nor charge more than the price stipulated.

Let a customer know the full cost of an expensive job when you can best explain the reason for it, *i. e.*, when he leaves it.

Keep a full record not only of repairs made but of work which should have been done but which the customer refused to have done. When the watch stops for the needed repairs, let him see the memorandum.

Mark plainly on the tag when a watch is received, what repairs are authorized, the price stipulated or given as the probable cost, the time it is promised, and enter all the items in the book of record. Customers have more faith in a book than memory.

Handle customers' watches with care. Many a man becomes disgusted when he sees his watch pawed over with a lot of others as though it were a piece of junk.

Arrange finished work on the watchboard alphabetically so that when Smith or Brown calls for his watch you know where to look for it.

If a workman fakes, don't argue, but discharge him.

Shirk no responsibilitly, but fulfil all obligations cheerfully.

In refusing to cut prices or take in unsatisfactory work be careful to do so without giving offense. The man whose watch is beyond repair will buy another some day.

Do not seek the reputation of doing the cheapest work, but the best.

Many methods adopted for forcing trade are of doubtful value; many, though productive of present business, are detrimental to a healthy development. New ideas and novel methods may be used but they should be carefully considered for probable future effects.

Cutting prices endangers development. To make some little present to the buyer is safer. The Declaration of Independence, the Constitution of the United States, or the National Anthem, well gotten up and presented to each buyer without comment would be commented on. Few Americans are familiar with either, yet they would be acceptable to all. A fine watch daily exhibited in the window with a daily record of its running would be valuable. Many such ideas could be carried out with benefit, but development depends mainly on the adoption and invariable practice of sound principles.

X. Y. Z.

Betrothal and Other Inscriptions.

HUMAN nature is the same the world over, and no one sees the sentiments of all lovers' hearts more beautifully or tenderly expressed than the jeweler. As the betrothal and wedding rings have been used from time immemorial, these have been used more than anything else to contain the sentiments of affection and love which are hidden out of sight and intended for the loved ones only.

Rings, however, are not the only mediums in which lovers have conveyed their expressions of love and friendship, for many of these inscriptions have been found in bracelets, in lockets, on charms and on garter buckles.

The following inscriptions have been found in various articles and are given as there found:

In rings and bracelets:

Mizpah (The Lord watch between thee and me when we are absent one from the other); *Fidelis ad urnam* and *Loyal jusqu' a la mort* (Faithful unto death); *Omnia vincit amor* (Love conquers all); "Only thee, June 19th, '95;" "More beyond, '94;" by a young New York millionaire, "Friend, sweetheart, wife; Thou and I forever; With this the giver for eternity; My love, like a silver circle, shall surround thee;" "All thine and thine forever;" one from Cymbeline, "Remain thou here while sense can keep it on;" *A fidele amico* (From a faithful friend); "Love the giver next to God;" "One for the other and both for God;" "Adonel—Amel—Zobel—Joel."

On the edges of a 33 degree Masonic mark: "For Emily when papa is at rest."

On garter buckles: *Honi soit qui mal y pense* (Evil to him who evil thinks).

The story concerning the origin of this phrase is an interesting one, and is as follows:

"The tradition is that Edward III. gave a grand court ball and one of the ladies present was the beautiful Countess of Salisbury, whose garter of blue ribbon accidentally fell off. The king saw a significant smile among the guests and gallantly came to the rescue. *Honi soit qui mal y pense*, cried the monarch. Then, binding the ribbon around his own knee, he added, "I will bring it about that the proudest noble in the realm shall think it an honor to wear this band." The incident determined him to abandon his plan of forming an order of the Round Table, and he formed instead the Order of the Garter.

An enraptured lover wrote the following poem, which he had typewritten and then a small photographic reduction made of it. This was but an inch in diameter and was placed in a locket.

I KISSED YOU!

I kissed you! Your eyes looking up into mine,
Revealed all your love as I gazed into thine.
Your arms clasped me 'round, your hreath on my face
Made heaven seem near in that lingering embrace.
Were the tortures of Hades the price of that kiss,
I would yet give it all for such infinite hliss.

I kissed you! A torrent of swift rolling flame
Rushed over my heart, my soul and my hrain.
I reeled in a trance that my will could not slip,
While the flash mounted up from my heart to my lip.
Ah! that joy was so keen it e'en stopped my breath,
And I feared not to die, could I thus have met death.

I kissed you! Your lips were pressed close against mine,
And I swooned in a passionate rapture divine,
Your hair swept my cheek, with its gold glints ahove,
While your hand caressed mine with an accent of love.
And these are the questions I ask, is it right?
That lips taste no more such exquisite delight?
Must heart against heart never more heat as then,
And if I were near would you kiss me again?

Collection of Ancient Silver Plate Owned by the Stationers Co., London.

THERE are few collections of silver in London which are more interesting or contain more unique pieces than the collection of the Stationers Co. that is displayed at the state dinners of that company. This collection is depicted in the illustration as it is arranged on a frame cupboard of black oak, the top and bottom of which are omitted in the cut.

At the back of the top shelf will be seen two silver-gilt dishes, one of which was the gift of Thomas Newcomb, her Majesty's printer, which was made about 1691, while the other was made about 1844 from old silver. The cup on the left-hand side of the shelf is of silver-gilt, was made about 1675 and was the gift of George Sawbridge, while that on the right-hand side, also of gilt, was made about 1680, and is the gift of John Macock. The flagon between the vase at the center and this cup was made about 1670 and was the gift of Abel Roper.

On the next shelf below at either end are silver loving cups, the gift of Thomas Davies, made about 1668, while on the second shelf from the bottom at the left hand is the two-handled silver cup the gift of Elizabeth Crook, made about 1665. At the opposite end of the shelf is another two-handled silver bowl made about 1681 and the gift of Thomas Vere.

On the lower shelf are two monteiths and collars of gilt, which were made about 1729 out of old plate, and behind the one on the right-hand side is a silver salver, the gift of the widow of Samuel Mearn, the bookbinder of Charles II., which was made about 1680.

The high silver flagon which stands at the back in the middle of the shelf was purchased in 1703 and was a gift of Hugh Herringman. The other pieces in the cabinet are all of more modern date.

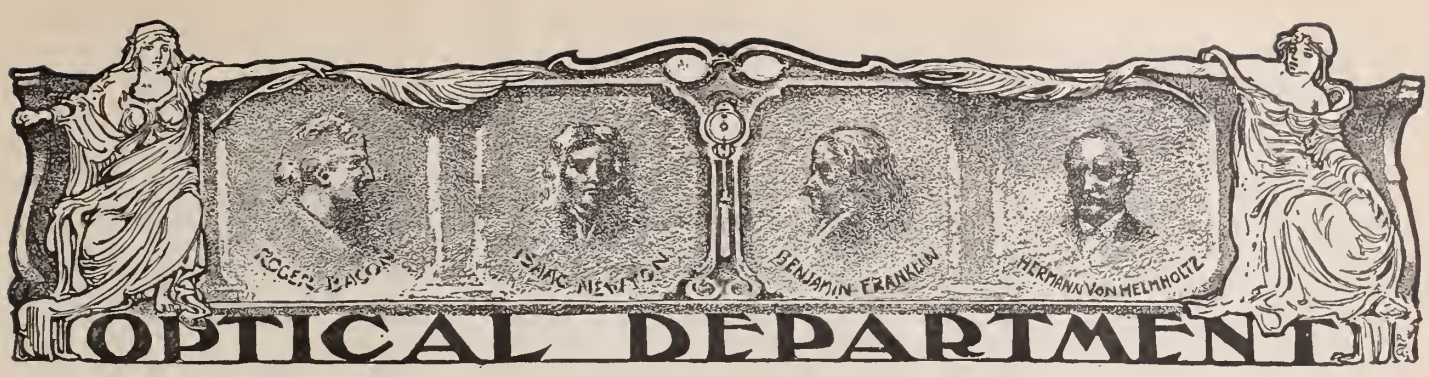
ANTIQUE PLATE OWNED BY THE STATIONERS CO., LONDON.

J. F. Rockwell contemplates erecting a brick building in Middletown, N. Y., to be used as a jewelry establishment.

"Koholia"

For Alcohol Lamps and External Use.

KOHOLIA is a methylic spirit, cheaper than alcohol and better for burning purposes. It can be relied upon, and we guarantee satisfaction with its use in connection with our lamps.



EVERYONE should stock it for the warm weather. It is used extensively in the summer for Traveling Companions, Chafing Dishes, Alcohol Stoves, etc.

WRITE FOR FULL PARTICULARS.

204 Church Street,

Cor. Thomas. NEW YORK.

Ohio Optical Association Affiliates With the American Association of Opticians.

COLUMBUS, O., April 15.—The first annual convention of the Ohio Optical Association was held in this city Monday, with about 50 members in attendance. The first session was called to order at 2.30 P. M. by the president, John C. Eberhardt. In his opening remarks the president said that the meeting of the previous year, at which the organization was effected, was the direct result of a meeting of some of the opticians of this State in Chicago. The only regret concerning the present meeting was the fact that illness had detained at home many who had expected to be present.

The treasurer, L. Beckman, having been detained on account of business, sent in his report, which was read by the secretary. The report showed: Receipts, $120; disbursements, $59.80; cash on hand, $60.20. This report was referred to the executive committee for auditing.

The executive committee had no formal report to make, saying that the president and secretary had needed no help in the work and no legislative action demanded their attention.

The membership committee reported favorably upon 15 new applications and these applicants were elected to membership.

A vote of thanks was extended to the secretary for his services, and his expenses incurred in attending this meeting were ordered paid.

Letters of congratulation and best wishes for the continued success of the association from Dr. Stevenson, of Akron, O., and John H. Ellis, president of the American Association of Opticians, were read. Also a telegram from Dr. Earl J. Brown, Chicago, announcing his inability to be present on account of serious illness.

The president then addressed the convention as follows:

Fellow Opticians, Ladies and Gentlemen:

We have gathered for the purpose of holding the first annual meeting of the Ohio Optical Society, and as the representative of that organization, I bid you a hearty welcome, and sincerely hope that this meeting may not only prove enjoyable and profitable to you, but that it may be the means for inciting that enthusiasm which will awaken your desire for analytical research anew, create more lofty ideals, and enable you to recognize in your field of labor greater possibilities, involving increased responsibilities, and calling for your very best efforts.

It is now a generally accepted fact, that the technicist of optometry deals with that part of the human anatomy, which not only supplies the mechanical means for accomplishing vision, but which if abnormal destroys nerve equilibrium and ultimately results in physical suffering, so that he who would minister to its needs must not only be thoroughly conversant with the various functions pertaining to this organ and its anatomical construction, and he able by mechanical means to neutralize existing abnormalities, but must also have that broad comprehension of the entire human anatomy, which will qualify him to reason from cause to effect, diagnose correctly the many perplexing anomalies, and discriminate between a true condition and a symptom of reflex, all of which, if coupled with a knowledge of human nature and the ability to interpret the imprint suffering leaves behind it on man's physiognomy, will enable him from the various data thus obtained, to build up an intelligent diagnosis and arrive at the true solution of existing conditions, thus making the prescription of the requisite correction a matter of comparative certainty, and enlisting the patient's confidence and co-operation, which so often are of such inestimable value in coercing spasmodic ciliary conditions into acquiescence.

The important question with which we, as members of t...s Society, however, have to deal is, how can our organization be made of value to its membership? The query naturally arises, what are our needs, and can they be supplied through this medium?

It will he unanimously agreed, that the opportunity for interchange of thought afforded by gatherings of this nature must have value, but the question is, how can these opportunities he made to yield the maximum results?

We therefore arrive at the first and paramount issue, "What are our needs?" And this the profession of optometry must solve, for it presents the basis for our claims for recognition. The answer will at once suggest itself, "Specific qualification," but what should the specific qualifications be? This is so serious a problem, in which such vital principles are involved, that the most exhaustive consideration must be given it. Until we have colleges whose courses are extended over a sufficiently long period to make the introduction into their curriculum of certain preparatory studies, such as the various hranches of mathematics, mechanical drafting and the intricate analysis of physiological optics feasible, these must be largely eliminated from our requisite studies. It is an estahlished axiom, that nothing more contributes to a well ordered and methodical mind, than mathematical training, and the optometrician of the future who can hring to his work a thorough knowledge of this science, will be all the better fitted to cope with the intricacies of refraction, but, at this time, when our college courses are so limited, and when those who most need assistance are an army of men already engaged in the pursuit of this profession, who could not if they would, find time to master a sufficiently adequate knowledge of higher mathematics necessary for the intelligent digestion of the textbooks on physiological optics, or the articles on this subject to which the columns of our most excellent journals are largely devoted, and that therefore the time necessary for their compilation and the valuable space they occupy are practically wasted, so far as the large proportion of refractionists is concerned, it seems evident, that the real needs of this element should be, if possible, ascertained, so that these publications and our optical writers can devote their efforts to the end, that they may accomplish the greatest good to the greatest number.

These perplexing conditions have been recognized and thoroughly discussed since the incipiency of our national organization, the outcome of which is the educational hranch of that body, which has for its purpose purely missionary work, and the fact that already "Comprehensive Education" has been accepted by the State organization throughout the country, as the paramount issue would indicate that its efforts are in the right direction, for these will create a demand for the commodity which is so essential to the evolution of optometry, and once you have this the supply will be forthcoming, as is evidenced by the pioneering now heing done by that dean of physiological optics, Prof. Rogers, who, in his elementary and advanced course, covering a period of four years, offers to the refractionist a feasible means for acquiring a thorough education in those branches that will form the curriculum of the attendance of the colleges of the future.

But, coming back to the present with its crudities and shortcomings, how can the general standard of efficiency be raised? Mr. Sweningsen, president of the Minnesota State Board of Examiners, in his address hefore the Dakota Optical Association, said: "Opticians will be benefited most by rendering skilful service to the puhlic. The puhlic in turn will not only trust and patronize the optical profession, but will accord it every possible assistance through its cordial support. Since the time optical science took on the garment of professionalism, a continual advancement has taken place, and at such a rate that it has kept pace, if not exceeded, that of any other of the professions in the same length of time. There are two reasons for this, "education and organization."

What, therefore, are our real needs? First, a thorough digestion of the theory of refraction, values and properties of lenses, a knowledge of the anatomy of the human eye and its various functions, a general knowledge of the human anatomy, more specifically those functions which directly or indirectly contribute to the accomplishment of sight, a sufficient knowledge of ocular diseases and the use of the ophthalmoscope to be able to determine whether an eye presents pathological conditions and whether the various refracting surfaces and fluids filling the eye are free from opacities, so that light may be freely transmitted to the sensitive tunic, finally, skill in the application of the various methods for objectively and subjectively diagnosing refractive conditions, and recognizing spasmodic conditions of the ciliary muscle, as well as carefully determining whether or not a condition of equipoise exists in the various extrinsic muscles, and should imbalances be here found, be able by persistent and varied examinations to seek out the cause of this disturbance, always bearing in mind, that these muscles are but the levers that are not factors in themselves, but depend entirely upon the force exerted upon them, and where a muscle seems inadequate to ascertain why this memher is not receiving its proportionate or normal nerve supply, which usually is found to exist in some refractive error, involving an excessive demand on the nerve center supplying the faulty muscle, thus robbing it of part of its supply, the correction lying not in treating the muscle but in neutralizing the error of refraction and stopping the nerve leak, there being, of course, exceptional cases where an actual anatomical defect exists, where prismatic correction has value.

These are the primary needs of the refractionist, and when he has thoroughly mastered these, he barely stands on the threshold of the mysteries of that most marvelous of our senses, of which Dr. Chalmers Prentice has said: "It is through the feelings produced by sight that in reading a book and looking at its illustrations, we are enabled to live in the very atmosphere of the scene depicted, and to drink and satiate ourselves to the fullest extent, feeling, tasting, smelling and hearing the various things the author suggests."

In analyzing the wonderful phenomena thus described, we find that they all emanate from that force or energy generated by the human machine termed "nerve force," which is the motive and regulative power on which every functional ac-

Optical Department.

tivity of the body is dependent. Because this is true, physical and mental fitness and equipoise are seriously impaired, where depleted or impoverished nerve conditions exist.

It is frequently found that eyes of the male being fitted for presbyopia reveal extreme refractive errors, as well as muscular imbalances, which have been carried through life without causing discomfort. "Why?" Because a rugged physique and splendid nerve equipment have been able to carry the burden without that exhaustion, which the same conditions would have produced in a less favored individual. Nerve force depends upon a healthy circulation, carrying adequate nutrition to the extreme terminals of the human body, one of which is the eye. A knowledge of the value of specific physical culture designed to not only encourage healthy circulation to the ophthalmic arteries, but also to contribute to the general toning up of the nerve centers and bringing the lung and heart action to the greatest point of efficiency, can frequently be made of inestimable value in "neurasthenic ametropia."

Having qualified himself along the lines indicated, he must by the application of these analytical methods begin to study humanity, and endeavor to acquire that intuitive capacity for reading character, that will enable him to become a capable diagnostician. Let us, therfore, endeavor to use the gifts with which nature and science have endowed us, to fathom the constantly varying forms of abnormal vision that daily present themselves to the refractionist, and learn to recognize the value and significance of the phenomena we encounter, collect carefully all available data, as the jurist accumulates evidence, and from this build up a tangible diagnosis, which will result in relief to the patient and satisfaction and ultimate success to the operator.

Let us determine to carry into our work renewed enthusiasm and earnestness of purpose; awaken to the realization of the fact that we are engaged in a pursuit that has for its purpose the alleviation of suffering and the contribution of happiness to our fellow men, and we will rise above trivialities, and assume that position amongst the professions to which the importance of our mission entitles us.

It is here therefore that organization can be made of much value, for man is prone to become a sluggard in his feeling of self-sufficiency, and therefore requires energetic prodding at intervals to awaken him from his mental lethargy. We should meet at least semi-annually, for if these meetings are made the vehicle for the opportunities they afford, we will all be benefited and return to our work with increased enthusiasm, new ideas and a desire to contribute to the evolution of optics.

Every refractionist, who will make comprehensive and classified record of the unusual cases he encounters will ultimately accumulate invaluable data, which, if given to the profession at large, will prove of inestimable value; it is by these opportunities of learning to know each other more closely, and allowing ourselves to become imbued with a broad interpretation of optical ethics, that we can solve many of the perplexing trivialities we inherit from the mercantile phase of optics, and evolve the broader and more generous phase of professionalism.

I would suggest that you make note of any point of interest that may occur to you during these sessions, and present them for discussion during the "Quiz" to be conducted, for you will thereby contribute towards making this meeting profitable.

In closing, I desire to express my appreciation of the co-operation I have received in the preparation of this programme, and to assure you that I esteem it an honor and privilege to preside over this body, which I am convinced will prove itself one of the factors in the future of "new optometry."

After an address on "The Value of Organization," by E. Klein, Cincinnati, O., F. W. Wallis, Columbus, spoke on the subject of "Optical Ethics." In the course of his remarks Mr. Wallis called attention to the fact that right and wrong had always been in existence; that these principles had existed before law was created, which, in fact, was made necessary by the disregard of right principles and really serves to merely emphasize them. The right-minded man does not need nor does he fear law. There are principles of right within every man and these should control his actions. Periods of time affect our courses of action and with the evolution of trades into professions our principles necessarily change.

In continuing the speaker said that it was difficult to formulate any system of optical ethics. The "trade" was just budding into a "profession" and necessarily such questions must be left largely to one's innate principles of right.

The question as to how opticians should regard each other arises under this head. They should, as the speaker said, live upon good terms with each other. There should be no antagonism, nor abuse, nor "rate cutting." Each should place the best possible construction upon the acts of others. It was urged that the much vaunted axiom, "The greatest good to the greatest number" had no place in this code of ethics but that rather the optician should help and judge his brother because it was right so to do. In conclusion, Mr. Wallis spoke of the evolution of optics and the need of considering, in this connection, the rights of the oculist and jeweler.

A very interesting discussion followed the address of Mr. Walis. The consensus of opinion seemed to be that in order to cultivate the right spirit, there was needed a more thorough study of the things justly required of the optician and his responsibilities in living up to these demands. It was urged that the optician must be superior to mere commercialism and to this end broader and more thorough education was urged as a means. It was also urged that opticians do not need and should not use the titles so frequently seen and that good work was the best advertisement. It was also urged that by influencing all opticians in the State to join the association many might be restrained from the evil tendencies to which they seemed so prone.

Secretary Edw. L. Jones, Sandusky, then read his paper on "State Affiliation," which will be printed in full in next week's issue of The Circular-Weekly.

A general discussion on the subject ensued and upon motion it was unanimously decided to affiliate with the American Association. Certain changes in the constitution being made necessary by this action, amendments were adopted increasing the dues from $2 to $3 and the initiatory fee to $4.

The convention then proceeded to the election of officers for the ensuing year, which resulted as follows: President, John C. Eberhardt, Dayton; vice-president, F. W. Wallis, Columbus; secretary, Edw. L. Jones, Sandusky; treasurer, J. R. White, Columbus. Executive Committee—George F. Merry, Dayton; E. Klein, Cincinnati; C. B. Garretson, Kenton.

The committee on membership was appointed as follows: W. J. Reynolds, Youngstown; Albert Zoellner, Portsmouth; William Burns, Coshocton.

The convention recessed at 5.30. At 6.30 a very pleasant and informal dinner was served and at 7.30 the association reassembled, when Dr. Andrew Timberman, of the Ohio Medical University, Columbus, read a paper on "What Should Be the Relation Between the Oculist and Optician?"

Upon the conclusion of this paper C. S. Hartman, Wapakoneta, addressed the association on "Optical Stumbling Blocks." An informal discussion followed, during which several unusual and difficult cases were cited to show what could be accomplished by careful and painstaking work.

The executive committee then reported that it had audited the treasurer's books and found them correct. The report was accepted and after a unanimous vote of thanks to Dr. Timberman the convention adjourned at 10.20.

Indication of the Pin Hole Test.

BY GUSTAVUS KAHN.

THE trouble with recent critics on the value of the pin hole test is the disappointment from overestimation about what is indicated from its use. The pin hole test does not tell us in every case whether there is an error of refraction or not; it does not decide on the nature of the refractive error, nor does it furnish us with a basis for estimating the amount of the ametropia and the strength of the correcting lenses, and if we expect to gain any reliable data of the above mentioned points by means of the pin hole, disappointment must surely follow, and we would feel like relegating the pin hole disk to the archives of oblivion, not being able to understand the purpose of this contrivance as an accessory to the trial case.

Let us take a case of hyperopia with perfect distant vision, where the accommodation amply compensates the shortage in the static refraction, by which means a perfect focus is projected on the retina and by which in perfect focusing no circle of diffusion is present to blur the sight. The pin hole when applied in such cases is not able to distinguish them from emmetropic refraction, but in myopia and astigmatism, also in absolute hyperopia which cannot be corrected by the accommodation, the pin hole at once decides that the blurring vision is caused by diffusion circles consequent to error in focus. Should the pin hole fail to raise the vision it is then either emmetropia or ametropia, with some organic defect, which is the cause of the imperfect sight and not the refractive error.

It is of the greatest importance to be able to decide this, but the pin hole is able to decide still further and give us more important information. Supposing vision is greatly below the normal and not improved by pin hole, and when client is directed to look through the pin hole at a distant point of light, while a ruby glass is imposed over the pin hole and he fails to recognize the change in color from yellow to red in the light point, it proves a central blind spot, for this is a sure indication of toxic amblyopia caused by excessive use of liquor and tobacco.

Every test case is usually furnished with two pin hole disks, which enable us to test vision binocularly and are also useful to measure the interpupilary distance and the amount of decentering required for the lenses. To measure the interpupilary distance of the eyes alone it is invaluable in cases where great accuracy is required for eyes possessing some muscular insufficiency with perfect coördination of the

Optical Department.

binocular function of vision. Especially is this the case for very strong lenses because of the increased prismatic effect caused by the slightest decentration of them.

When great difficulty exists in holding the trial frame on a perfect level for interpupilary measurement we substitute the stenopaic slit for one eye instead of the pin hole. The method of measuring is simple. Let the patient look at the desired distance through pin hole, one for each eye having been placed in the cells of the adjusting trial frame; separate the two eyes until two holes are seen or one hole on one side and the slit on the other side; then turn the thumb screw in until the holes or the hole and slit completely overlap, but no further. The distance they are separated from each other gives the desired result as measured in the trial frame.

What has been said thus far concerned the use of the ordinary pin hole disk furnished with every trial case. Besides that there exists a regular system of eye-examination by the pin hole method, of which the so-called Scheiner's test for refraction is an example of the most primitive mode of it. By having the proper outfit of the different kinds of pin hole disks and using the sight system in connection with spherical and cylindrical lenses by the light point, we are able accurately to diagnose and measure by fogging and otherwise cases of exceedingly high ametropia with amblyopia.

For all normal cases of ordinary ametropia we have much better and more delicate tests than any pin hole method affords, but for the cases already mentioned the pin hole method is the only help, and pretty good at that.

Let me, for the purpose of illustrating, mention the following case: Mrs. R. T., aged 65 years, vision right eye, $\frac{10}{2.00}$ left eye, $\frac{5}{2.00}$ with no improvement through ordinary pin hole. The ophthalmoscope is unable to give us any aid for measuring the refraction in this case owing to the blurring of the media probably in the crystalline lens. The ophthalmometric examination is also not very satisfactory owing to the grayish colored background. With retinascopy, the shadows and their directions and rate of motion are only very dimly discernible through the contracted pupil.

The test case and other subjective means are also without help owing to the small amount of vision present. Applying our system of pin hole tests with the light point in connection with spherical and cylindrical lenses we at once ascertain the refraction in this case with ease. It is: Right eye, Sph.—9.50 D ⊃, Cyl.—3.25, ax. 20° $\frac{20}{2.00}$; left eye, Sph.—12.50 D ⊃, Cyl.—3.75, ax. 160° $\frac{15}{2.00}$; vision with correction of both eyes together, nearly $\frac{20}{1.20}$. The strength of glasses for left eye has been reduced from spherical—12.50 to —9.50 D, which slightly reduces vision from $\frac{20}{1.20}$ to $\frac{20}{2.00}$ The glasses, however, have proven of the greatest benefit, and promise to do so for many years, owing to the stationary condition of the unripe cataract and refractive error present.

A New Artificial Eye Industry Started in Taunton, Mass.

TAUNTON, Mass., April 15.—A new industry akin to the optical business has been started in this city by Douglas Shepard, with a small factory on W. Brittania St. His line is the making of artificial eyes for the use of persons, and also reproducing in glass the eyes of animals and birds for taxidermists. There has been for many years a great deal of "trade secrecy" about this industry.

Those who have been allowed the privilege have been obliged to serve an apprenticeship of five years before being qualified to launch themselves into the business as experts, and even now there are but very few men in the business who can turn out an eye perfectly and unassisted by fellow workmen.

In England, where most of the artificial eyes are made, there are 10 men engaged in the work, and it was there that Mr. Shepard learned the business. So secretly was the art kept that only a chosen few were allowed in the factory, and nothing short of a matter of life and death would permit a man, not a workman, to enter. Mr. Shepard spent five years in the factory and learned the art thoroughly, being not only obliged to acquire the ability of fusing glass properly, but also to study the eyes of all the different animals and birds, their shades, texture and all the little details that give the artificial eyes a natural appearance.

He made a deep study of all the different features, and now he can make an eye in about six minutes. It is said there are only two others in this country who can do the same unassisted, these men being employed in a factory in New York. Aside from these three men mentioned, all others in the business in this country have only a partial knowledge of the art, and it takes four men to make a single eye, each on a separate part of it and all being engaged four times the length of time required by the few men who are capable of doing it alone.

The rooms where the eyes are turned out are in total darkness while the work is going on, in order that the best results may be obtained. As the eye for each individual species of animal or bird has to be studied, the light for each must be as near perfect as possible, and this is had only by the most careful manipulating of the sun's rays. In the artificial eyes there are upward of 200 different shades and colors, and as each has to be blended with extreme care, it is necessary to conduct the operation in a dark room, the daylight being too strong for the work on the delicate rays.

The material from which the eyes are made is fusible enamel and is imported from Germany, both by England and this country. There is a large demand throughout the country for the cheaper grades of eyes, such as used in toys and dolls, but the firm here confines itself to the manufacture of only the higher class of goods, such as used by taxidermists and surgeons. At the factory Mr. Shepard shows a large collection, including eyes for all kinds of big game, the tiniest of song birds and those for human beings. Mr. Shepard is to associate himself in the business with John F. Mason, under the firm name of Shepard & Mason.

Optical Notes and Briefs.

S. Kurtz Zook, Lancaster, Pa., has added an optical department to his jewelry store.

W. C. Wiseman, optician, Asbury Park, N. J., has made extensive improvements in his optical parlors.

James J. Downey, who succeeded S. J. Shimberg, Troy, N. Y., has disposed of his business to C. H. Limerick.

Recent Publications.

OLD PLATE: ITS MAKERS AND MARKS. By J. H. Buck. New and enlarged edition. Illustrated with photogravures and woodcuts. 12mo, 327 pages. Published by the Gorham Mfg. Co., New York. Price, $6.

This work can undoubtedly be classed among the most valuable publications on silver ever offered to jewelers, and one that as a work of reference will be greatly appreciated by the trade. While ostensibly a second edition of the work of the same name issued by the author in 1888, it is in reality an entirely new work, as it is greatly enlarged, takes up new subjects and treats all in a different manner than formerly. In addition are a host of new illustrations.

The subjects treated are principally English and American silver products, and the silversmiths of these countries and their marks, while in the former edition the marks as well as the products of European countries were treated as well.

Beginning with the first reference to gold and silver in the Old Testament, the author reviews the art of the silversmith up to modern times. Taking up the subject of the standards, the work gives extracts on the subject from English publications and laws that are interesting not only to the silversmith but the historian and to all interested in the development of the art of the worker in precious metals. The first chapter is devoted to the subject of gold and silver and their alloys, standards, and the assay and standard weights, while in the second chapter the author takes up the subject of hall marks and the mediæval guilds, etc., with the history of the Goldsmiths' Co., of London, and the early legal regulations in London as to silver and its marks.

Then follows a chapter on the development of the makers' marks from the stage of the crude symbols up to the marks of recent years, with which is given extracts from early laws of the American colonies on the subjects of gold and silver. Many of these laws make interesting reading matter, and the extracts are full and the references copious. One of the first silver laws of this country which was passed Jan. 28, 1814, and was intended to fix and regulate the policy of silver plate manufactured or sold in Baltimore, is given in full. It is a most elaborate law of eight sections, and s rves to show that the subject of silver stamping legislation was even then considered as important, if not more so, than at the present time. The chapter concludes with a brief statement of the laws of the present day in the various States of the Union.

With the beginning of the fourth chapter the author takes up the American silversmiths chronologically and geographically, especially those of Boston, Albany, New York, Philadelphia, Providence, Salem, Newport and Baltimore, and herein is to be found much valuable information that will aid the jeweler in tracing the makers of old plate. In addition there are many points which will be new to the silver trade and jewelers, and even to those who consider themselves well informed upon the subject. For instance, the author calls attention to the fact that silver with the mark "Revere" is most plentiful and shows that this is not due to the prolific work or capacity of the famous patriot of Lexington, but to the fact that there were four Reveres who were silversmiths, the first being Apollos Revoire, born 1702, who later changed his name to Paul Revere, and whose works are marked P. Rewere and P. Revere. He had three sons of whom the third, Paul, born Jan. 1, 1835, was the patriot noted as a silversmith and engraver, and another son Thomas Revere was also a silversmith; a fourth silversmith of the name was Edward Revere, a nephew of the Hero of Concord.

In the chapter devoted to ecclesiastical plate the author takes up the subjects of chalices, patens, beakers, flagons and basons and the text is fully illustrated.

The sixth chapter devoted to domestic plate is the most comprehensive of the volume, and will probably be the one most interesting to silversmiths generally, as it takes up the history of the articles which compose the commercial lines of silver today, namely: spoons, forks, loving cups, tankards, hollow ware, jugs, drinking vessels, porringers, tea and coffee pots, candlesticks, etc., and ends with a long and comprehensive dissertation on maces. The articles are taken up historically both from the standpoint of use and manufacture, and interspersed in the text are hosts of quotations of early authors in which such articles are referred to. In this chapter the illustrations are especially numerous both as to line cuts and engravings, many interesting pieces to be found in the collections of museums or held by churches or private parties, being illustrated in detail; among these should be mentioned the illustrations of the Norfolk, Va., mace made in 1753 and the South Carolina mace made in 1756, both of which are considered to be among the most magnificent specimens of their time.

One chapter is devoted to wine-cisterns, vases, and other decorative pieces such as the Daniel Webster vase now in the Public Library at Boston and Hull vase in Department of State at Washington, etc., both of which have been illustrated in the columns of THE CIRCULAR-WEEKLY. To engraving on plate another chapter is given in which the author takes up inscriptions, monograms, heraldry, and their importance in tracing the history of a work in silver.

One of the most valuable chapters to collectors and to those whose advice is sought on the purchase of old plate, is that devoted to frauds and imitations, which treats also of transformations and reproductions. The author not only describes how antique plate is reproduced by the electrotype and other processes, how genuine hall marks are forged, imitated and sometimes transferred from a small unimportant article like a spoon to a large counterfeit cup or vase, but also tells of methods and gives points by which spurious plate may be detected.

Over 120 pages are devoted to a list of ecclesiastical plate in New York, New Jersey, Pennsylvania, Delaware, Maryland, Massachusetts, New Hampshire, Rhode Island, Connecticut, North Carolina, South Carolina, and Virginia. In this list is given the church or other place by which the plate is owned together with a full description of the articles, their makers, the marks, arms, words, etc., with which they are inscribed, and in many cases there also appears an outline illustration or photogravure of article as well.

The book contains a chronological list of examples of dated American plate mentioned in the volume, giving the date, the maker's mark, the name of the maker, the name of the article, the owner, and in many cases the donor; also a table of the London date-letters and of the London hall marks, and a list of donors of plate mentioned in the volume, concluding with a list of American makers prior to 1850, and an index to the makers and marks mentioned in the book.

As the author states in the preface, his object in bringing out a new issue of Old Plate is to attempt a description of some of the many examples of silverware to be found in various parts of the country not only those by foreign but those by native craftsmen as well, and to endeavor to trace more especially the names, marks and abodes of the latter. He quotes Professor Woolsey, of Yale University, who in an article in *Harper's Magazine* urged the importance of investigating the subject of American silversmithing and stated that a careful list of these works, their dates, etc., is needed.

Mr. Buck speaks modestly of his work in examining collections belonging to various churches to which he obtained access, as well as his study of specimens in private collections, but says little about the amount of research which he must have made to obtain the data necessary to compile this work. There is no man more competent to have undertaken the task than the author, and the work which he carried on by permission and through the liberality of the Gorham Mfg. Co., who published the volume, has resulted in an addition to the literature on silverware that will prove of immeasurable value to collectors, historians, silversmiths, and all interested in the development of artistic handicraft.

In the volume the writer states he would be glad to have the names of any places where old plate is to be found, and will be thankful for any notes, impressions from marks or suggestions with which his readers may be good enough to favor him, in order that greater efficiency may be insured in any future edition.

Grant Jewell, Lamont, Ia., last week was suddenly shot through the hand by a revolver which exploded while he was opening his cash drawer.

By Puteanus.

Repairing of American Watches.

(*Continued from issue of April 8.*)

Fork and Ruby Pin.—In Fig. 1 was shown the workings of fork and ruby pin at four different periods of connection, beginning at the right side. The impulse given by the fork continues in the same manner to the left side until the fork has reached such a position as to enable the ruby pin to freely escape from the notch of the fork, which position is illustrated by E (Fig. 6).

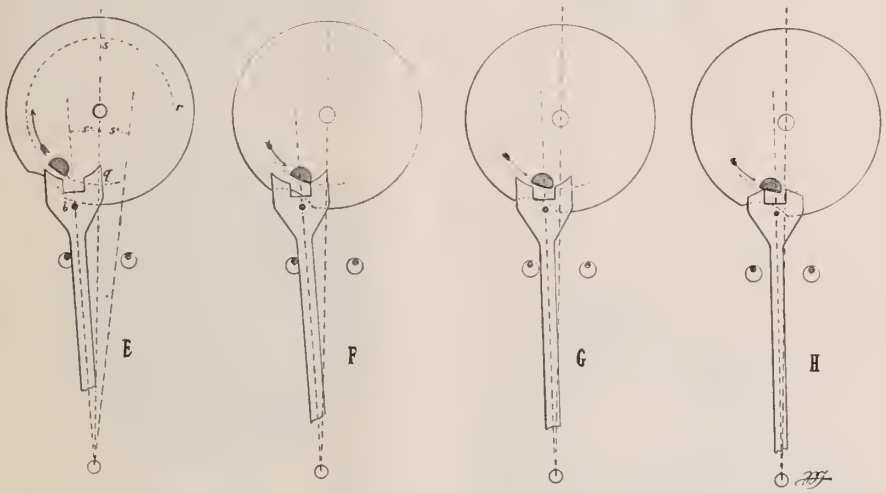

Fig. 6.

The impulse given to the ruby pin, with which the roller forms a solid part of the balance, makes the latter continue its course in the direction of the arrow to about the point *r*, which, measured from the center-line, is three-fourths of a circle.

When at or near this point the balance is pulled back by the tension of the hair-spring, which has been wound up the same length as that of the arc described by the balance, say, three-fourths of a turn. Not all impulses of the fork are strong enough to drive the ruby pin with the balance to the point *r*, which is considered to be the most favorable length of arc described by the balance, its total vibration being in this case one and a half turns, because when returning, the ruby pin, after having received the impulse from the fork, will be carried to the opposite side of the point *r*, on the left.

In order to make the balance describe such vibrations many things have to be observed; for instance, correct strength of mainspring, small friction of pivots, small and difficult in small vibrations that such vibrations are one of the reasons why a watch will run slow.

It is not safe to have the balance describe vibrations which surpass the point *r*, because it would then only need a small additional motion in the same direction to make the ruby pin strike the back, *g*, of the fork, which it would be exposed to receive occasionally when carried in the vest pocket. Such additional impulses not only make adjustment impossible, but they also endanger the existence of the ruby pin, because the ruby pin, knocking against the fork at *g*, while the latter is reposing against the banking screw, is liable to break off, an occurrence which is frequently the trouble with watches brought in for repairing by horseback riders. To prevent the balance from making too great arcs a weaker mainspring can be selected.

The guard pin, *b*, lying near the roller, when the escapement is locked (Fig. 6, E), is to prevent the fork from falling back from one cause or another. This pin must be very near the roller, but should not touch it in any position of the watch, because it would then prevent the balance from turning freely. Were it far from the roller it would be unable to prevent the fork from falling back to the other side. It is only when the ruby pin is ready to strike the fork (Fig. F) that the crescent, cut from the roller, allows the guard pin to pass from the left to the right, or *vice versa*.

The working of the fork and ruby pin cannot be clearly observed in many watches, especially in those called full plate movements, and this is the chief reason why watches are sometimes returned to customers without being properly repaired. The sketches F, G and H illustrate a faulty depth, which occasionally may be encountered. In F is shown the ruby pin coming from a direction as indicated by the arrow. Speaking about the ruby pin we want to correct a misprint which appeared in the issue of April 8. The last three lines speak of the "length of a ruby pin." This should have read, "the length of arc of a ruby pin," etc.

The ruby pin strikes in the notch, although very near the horn, and unlocks the fork, but when the unlocking is finished and the fork is ready to communicate its impulse to the ruby pin (Fig. G), it does not reach it and slips underneath. The momentum of the roller, however, makes the ruby pin follow the fork, and when it is too far behind it is generally pushed in the notch by the horn of the fork. The watch may keep running, but the repairer knows that there is something wrong, which he is unable to discover, with the result that he is unable to regulate the watch.

We have seen several illustrations of Fig. 1, and from E, Fig. 6, that in a correct fork and ruby pin device the pine steers clear of the horns in all positions, hence these latter are apparently of no use. It would therefore be much better to dispense with the horns and to finish the ends of the fork with inclined planes in a reverse direction, such as we sometimes find in English watches and as illustrated by H, Fig. 6.

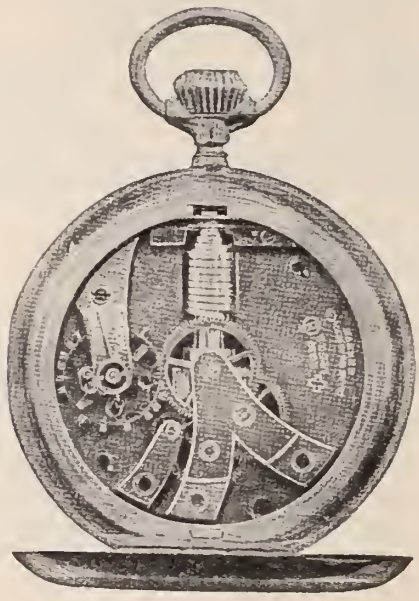
Such a construction, instead of helping the ruby pin into the notch, would operate to make the watch stop when the depth is not correct, which would be a certain indication to the repairer where to find the trouble and compel him to set things right.

The horns, however, cannot be eliminated with safety, because, as stated above, if for some reason the balance makes greater vibrations than the point *r* in Fig. 6, E, the ruby pin would probably fasten itself upon

the flat edge of the removed horn and stop the watch altogether. While horns are needed to check its too great vibrations, they, however, are not required to be very long. This can be inferred from the dotted curve which indicates the place where the ruby pin will strike the fork in that particular case.

Small horns are only required in American watches which carry that kind of ruby pin shown in all our previous illustrations. Later on we intend to show why this American ruby pin is better than all other pins, ovals, triangular, square, or round.

(To be continued.)



The "Grasset" Watch With Cylindrical Springs.

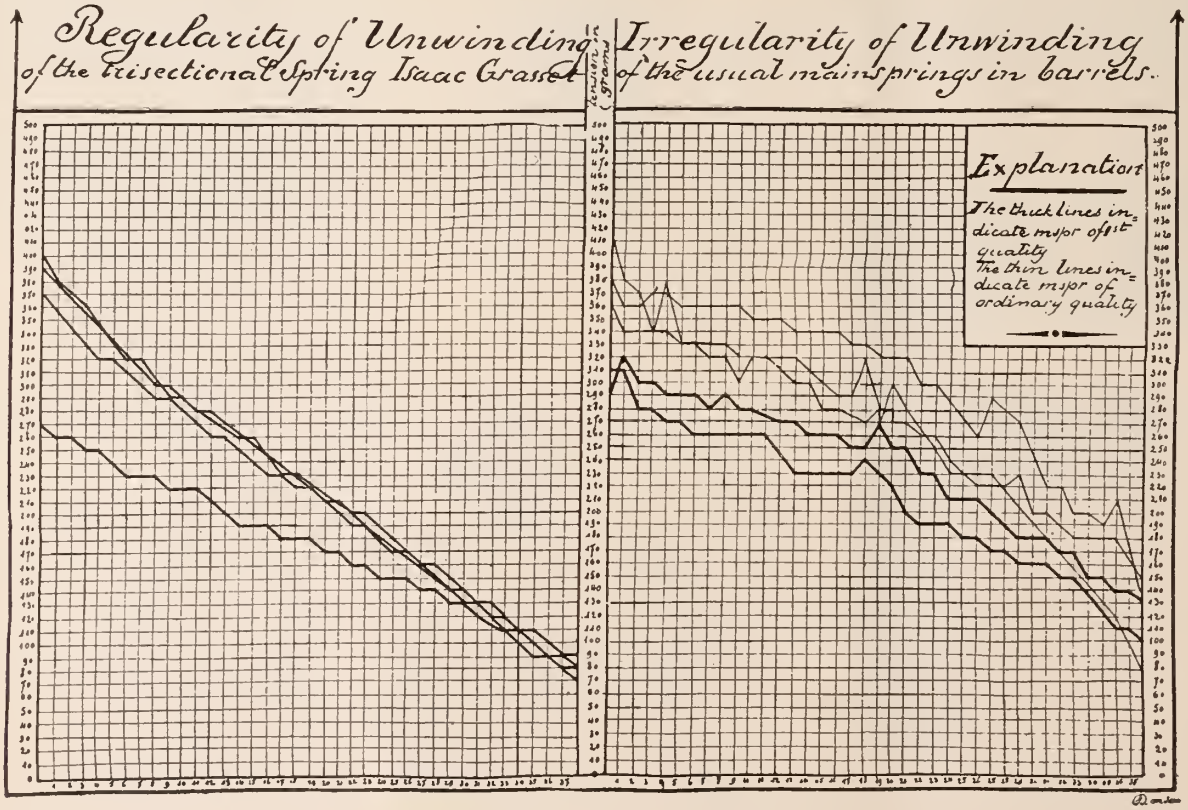
(Translated for THE JEWELERS' CIRCULAR-WEEKLY from the *Revue Internationale de d'Horlogerie.*)

ALTHOUGH not exactly one of the latest innovations in the horological field, the Grasset watch, with its cylindrical spring, is comparatively little known and sufficient interest attaches to it to justify the following lines describing its peculiarities: Its most striking feature, perhaps, is its simplicity, and the presence of a cylindrical spring which takes the place of the barrel, etc., and the usual winding arrangement.

The impression which one receives upon seeing the empty space resulting from the elimination of the barrel and its accessories is that these watches are incomplete. That they have an excellent rate, however, is proven by practical results and especially by the chronometers constructed after this system. These latter have been submitted to the tests at the Geneva Observatory and have obtained a rate bulletin of the first class.

The new motive arrangement consists of a toothed staff parallel to the plate and engaging directly with the center pinoin, a ratchet placed on the same arbor as the staff, and actuated, in winding, by the knob, and a cylindrical mainspring enclosing the staff and the ratchet to which it is hooked

MOVEMENT OF THE GRASSET WATCH.



at each end. The spring tightened by the ratchet, when wound up, is distended at the other end fixed on the staff, moving it as well as the train. The hands are set by drawing the knob. The stem of the winding work is toothed, and gears with an intermediate wheel which engages with the minute wheel.

The number of pieces in this new motive mechanism, including the winding and setting, is reduced to 10, or one-half of the number of pieces (20 to 22) usually necessary for the same purpose in watches with a barrel. It is obvious, therefore, that the cost of manufacturing is materially diminished.

The most interesting part of the arrangement is unquestionably its cylindrical mainspring, which has a force equal to a mainspring 13 or 14 lignes and which weighs only one-third as much as mainsprings of 19 lignes in barrels required for the same work. This spring consists, of course, of a single ribbon, but is composed of three sections; that is, from the ratchet to which it is fixed it first twines around the motive arbor to the opposite end, then returning on itself, it forms the second division up to its point of departure on the ratchet; thence it rolls anew to the other end of the arbor, thus forming the third division. The extremity of the third division (external) is attached to the motor arbor. It is as easy to form this cylindrical spring as it is to wind a wire around a spool, and the conditions of manufacture are the same as with barrel springs; that is to say, the shape is given in the last operation and after the tempering.

The advantages of this spring, outside of its comparative weakness, consist essentially in the perfect regularity with which it gradually unwinds. As a matter of fact, the comparative diagram, reproduced below from a photograph of the original, is conclusive in this respect. It has also been found, after experience with several hundreds of these watches, that the adjustment is more easily and rapidly accomplished than in the case of timepieces which have a barrel.

This result will be easily comprehended, for it will be observed that the cylindrical spring is uncoiled freely and regularly, while the flat spring, confined in the barrel, is subject to friction, to lateral pressure

either against the bottom or the cover of the barrel, as well as among the coils themselves. These unroll and rub against the following ones, causing a momentary adherence and suspending a part of the effective force of the train, which is restored a little later when the adherence has ceased. This deviation manifests itself, as

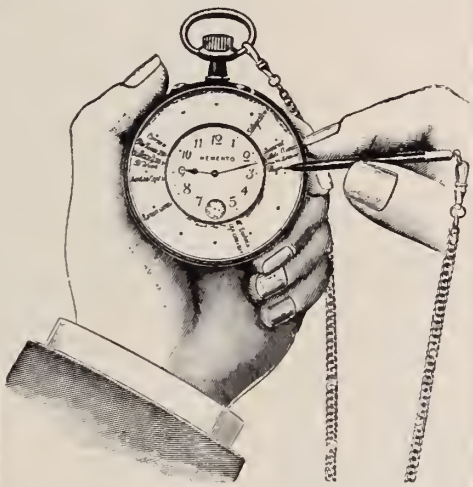
CYLINDRICAL SPRING WHEN WOUND.

shown in the diagram, in the form of a sudden change of tension, followed almost immediately by a resumption of force.

As regards the chances of breaking, the mainsprings do not depend in any way on the shape but on the workmanship, the tempering and the quality of the steel employed, either for flat or cylindrical springs. It will be readily understood that the simplicity of this new caliber will facilitate repairs and considerably obviate the reassembling of the different parts of the watch.

CYLINDRICAL SPRING UNWOUND.

The omission of the barrel and its parts, and the apparatus for winding and setting the time, materially diminishes the weight of the timepiece. It must be remarked, however, that since the motive arbor actuates the center pinion by bevel gearing, the teeth must be very accurate, both in form and proportion, so as to avoid premature wear, which will infallibly occur in badly arranged gearing. In this respect the central gearing of the Grasset watch has been calculated and arranged with the utmost care.



It is obvious that the amount of space on the plate at one's disposal may easily be utilized for additional works, such as date work, etc. Mr. Grasset has indeed carried into effect a really novel idea of incontestable value, both as regards simplicity and facility of manufacture.

J. F. Wachtel, formerly with S. Mussma, Williamsport, Pa., has set out for Johnstown, Pa., where he will have charge of a large jewelry establishment.

The New "Memento" Watch.

THE horologists' inventive genius has recently found a vent in the production of the novel timepiece illustrated herewith and manufactured by M. Didisheim-Goldschmidt, Chaux-de-Fonds, Switzerland. The purpose of this watch is not only to tell the time but to serve as a "gentle reminder" as well, thus dispensing with that pristine recollecting agent—the note book.

The reminiscent power of this watch is accomplished by arranging around the dial,

NOVEL DIAL OF "MEMENTO" OPEN FACE WATCH.

a free space, upon which can be written, near or between the hours, a little note which will be sufficient to bring to mind at once that of which we want to be reminded during the day. This special part

WRITING SPACE IN HUNTING CASE.

of the dial is covered by a hard, ivory colored, indestructible fire enamel. As one frequently refers to his watch to determine the time, by looking at this "Memo" watch he is involuntarily reminded of his engagements, etc. Moreover, the inside cap of the watch case is fire enameled all over, and on this large surface addresses, time tables or numerous notes can be written.

The inscriptions are easily erased by rubbing them with the finger, a piece of cloth, or a moist piece of paper. A gold plated double Albert chain with a pencil is attached to each watch. The pencil can be drawn from its case by turning a button in the same manner as with other metal pencils of the kind. The chain is sufficiently long to allow a person to take notes while walking. This "Memento" watch is qualified to do good service not only to business men, but also to engineers, officers, doctors, professors, etc.

The movement has the lever escapement, with visible pallets, and is non-magnetic. It is nicely finished and is of the popular flat style, with gun metal case. The watch is made in large and small sizes, with open and hunting cases. In these latter the notes are made inside of the cap in which the hour numbers have been placed. The illustrations show the use of two of the note spaces. Patents have been taken out or applied for in all great countries. They also include the idea of celluloid and other watch protectors on which notes and inscriptions can be made.

Flat Watches in Vogue in London.

THE growing disinclination among society men in England and America who study elegance in their attire to disturb the otherwise graceful outlines of their figure by wearing a watch has so injured the sale of pocket timepieces that the wits of manufacturers have been exercised to meet the difficulty, says the Cincinnati *Enquirer*. A London jeweler has just exhibited a watch which evidently solves the problem.

It is no thicker than a silver dollar inclosed in a gold case—that is, the watch and case together are not more than twice the thickness of a silver dollar. It is keyless, and has passed every observatory test. Its presence in the pocket of a thin silk waistcoat is hardly noticeable. A lady's watch, made on the same model, probably is the thinnest practicable timepiece in the world. Its works are no thicker than a silver half dollar.

The Prize Winner for the Best Horological Subject.

THE prize of five dollars offered for the horological subject best calculated to interest the readers of THE CIRCULAR-WEEKLY has been awarded to Edward Bauerle, Waco, Tex. The title of this subject, which will be treated in the columns of this journal, is, "The Escapement and Balance of a High-Grade Movement, and Its Proper Condition to Obtain the Required Results."

The City Commissioner of Toronto, Ont., has reported to the City Council, recommending the illumination of the City Hall clock. The cost of the equipment for this purpose is estimated at $2,700 and the annual expense of maintenance, $2,159. These figures apply to the installation of a special lighting plant and the Commissioner has been further instructed to find out at what cost the clock could be illuminated from outside sources.

Workshop Notes and Queries.

[Answers are solicited from our readers to the questions published weekly on this page.]

QUESTION No. 436.—**Rose Colored Silver.**—*Please give us a receipt for rose finishing sterling silver pieces.* *F. C.*

ANSWER:—To produce a fine pink color upon silver, Fearn recommends the following: Dip the cleaned article for a few seconds in a strong, hot solution of chloride of copper, then rinse and dry, or dip it in spirit of wine and ignite the spirit.

QUESTION No. 437.—**Aluminum.**—*Kindly advise us through your Workshop Notes if aluminum can be oxidized or blackened.* *J. E. S.*

ANSWER:—In answer to Question No. 425, in the issue of THE CIRCULAR-WEEKLY of April 8, 1903, we described how the color of aluminum could be changed to that of any other metal. If it be desired, however, to have the aluminum black or oxidized, it can be easily done after; for instance, it has been brass or copper coated in the manner described in the abovementioned answer. Black for instruments is made of about a thimbleful of lamp black, which is put on a flat stone or smooth slate and thoroughly mixed with four or five spots of gold size by means of a palette knife or other supple table knife. The whole should be about as thick as putty. The less gold size there is the better. Have it so that the lamp black just sticks together. If too much gold size be added, the effect will be a bright black and not a dead black. Now add turpentine, about twice its own volume to the whole, mix with a camel's hair brush and apply to the metal.

QUESTION No. 438.—**Lacquer.**—*How can I make a good anti-oxidizer to be used on gold work?* *J. W. B.*

ANSWER:—This question was answered in THE CIRCULAR-WEEKLY of April 9, 1902, under Question No. 86. The following may be added: *Pale Gold Lacquer.*—One gallon of methylated spirits of wine; 10 ounces of seedlac bruise; and ½ ounce of red sanders; dissolve and strain. *Deep Gold Lacquer.*—Seedlac, 3 ounces; turmeric, 1 ounce; dragon's blood, ¼ ounce; alcohol, 1 pint; digest for a week, frequently shaking, decant and filter. *Gold Lacquer.*—Ground turmeric, 1 pound; gamboge, 1½ ounces; gum sandarach, 3½ pounds; shellac, ¾ pound; all in powder; rectified spirits of wine, 2 gallons; dissolve, strain and add turpentine varnish, 1 pint. Smaller quantities can be made by reducing in weight proportionally all the ingredients of the mixture. The Acme transparent lacquer for silverware, bronze and all kinds of metal works can be bought ready made at 20 cents a small bottle from any of the dealers in jewelers' supplies.

QUESTION No. 439.—**Steel.**—*What kind of acid is used to remove blue from steel? Should the article afterward be plunged in an alkali bath, or will cleaning in alcohol be sufficient?* *J. W. B.*

ANSWER:—This question was answered under Question No. 232 in the issue of Sept. 10, 1902. Some watchmakers use sulphuric acid, which, however, does not whiten well; it often leaves dark shades on the surface. It is better to use diluted hydrochloric acid (muriatic acid). It is important always to remember to thoroughly wash after the use of acid, and then to allow the object to remain for a few minutes in alcohol.

QUESTION No. 440.—**Drilling.**—*Sometimes I have to fit a new balance staff pivot, but I am not always successful in drilling the hole. Although I have very hard drills they seem rather to become polished and to slip over the steel instead of cutting it. Can it be caused by not having sufficiently tempered the balance staff? I always make it of a light blue. Or might it be caused by the lubricant which I use with the drilling, i. e., watch oil? I adjust my staff in a split chuck of the American lathe and revolve it at a good speed.* *H. H. V.*

ANSWER:—If your drills are correctly made, the cause of your failure in drilling is probably the great speed which you use when drilling. You do not give the drill time to cut or to take a hold in the steel, and instead of cutting, it polishes the hole. The inclination to rush with everything seems to be inborn with the present generation of mankind, but rushing can hardly be advised in serious watchmaking. The drilling of tempered steel should be done with a continuous slow rotation, but considerable pressure should be applied. Constantly remove and sharpen the drill, clean the hole and have an abundant supply of oil. Whatever liquid is most effective in keeping the drill cool will probably be the best. Turpentine or petroleum are better than oil, since they have the additional advantage of increasing the "bite" of the drill.

QUESTION No. 441.—**Stripping.**—*In using a cyanide stripping solution for gold I find that I can only strip small pieces of jewelry at a time. When I put in several pieces or one large piece like a watch case it will not strip. Cyanide solution is two oz. cyanide to the quart. I use three-pint solution. Copper cathode, 2x4 inches long. Dynamo capacity, 15 volt and five amperes. Wires leading from dynamo to bath are No. 18 insulated copper wire.* *C. S. S.*

ANSWER:—The method of removing gold from gilded articles varies considerably, according to the way in which gold has been deposited. Iron and steel are "stripped" without any injury to themselves by dipping them into a bath of 10 parts of cyanide of potassium and 100 parts of water and connecting them with the positive pole of a battery. A wire or foil of platinum is attached to the negative pole. This is simply inverting the ordinary position of the poles, and the gold upon the iron or steel is partly dissolved in the solution of cyanide and partly deposited upon the platinum anode, from which it is removed in a regular gilding bath. When there is only a mere film of gold upon iron or steel, it may be removed by the cyanide alone, without the aid of electricity, but this method is slow. Silver, copper and their alloys may also be stripped of gold by this process. But as the cyanide at the same time dissolves not only the gold but also the other metals, it is preferable to operate as follows: Silver which is to be ungilded is heated to cherry redness and immediately thrown into a pickle of more or less diluted sulphuric acid. The gold scales off and falls to the bottom. The operation is repeated until gold no longer appears upon the surface of the silver, which is then white and frosty. This process is imperfect and ill-adapted to light and hollow articles, for which the first prescribed process is preferable. For copper and its alloys, such as bronze, German silver, brass, etc., two different methods may be followed, according to the nature and volume of the object. Small trinkets, thinly gilded, either by current or immersion, are dipped into the following bath: Sulphuric acid, 10 volumes; nitric acid, one volume; hydrochloric acid (muriatic acid), two volumes. The above mixture is simply aqua regia in a large quantity of sulphuric acid. The excess of sulphuric acid allows the gold to dissolve without attacking to any extent copper or its alloys. Ordinarily the sulphuric acid is placed by itself in a stoneware jar, and the mixture of hydrochloric and nitric acid (aqua regia), kept bottled, is gradually added to it as the operation of stripping proceeds. The same sulphuric acid may last a long time provided it is kept well covered, and the action of the acid mixture is promoted by additions, from time to time, of nitric and hydrochloric acids. The articles should be withdrawn often, in order to watch the operation, which is terminated when no traces of gold are seen, and when the copper has acquired a uniform blackish-gray coating. We may also ascertain whether all the gold has been dissolved by plunging the objects into the mixed acids in which they will be perfectly cleansed when the gold has disappeared. Nitrate of potassium (saltpetre) and chloride of sodium (common salt) may be substituted for the nitric acid and hydrochloric acid respectively. The result is the same; but in this case the salts must be introduced into the acid in a finely powdered state and stirred with a glass rod in order that they may dissolve and form aqua regia by their decomposition. A few operators ungild small trinkets by a more or less protracted immersion in the acid mixtures for bright or dead dipping, but they spoil their acids and lose the gold. For removing gold from old or imperfectly gilded articles, Napier, and also Watt, direct that the articles be placed in strong nitric acid (pure), to which some common salt in crystals is then added. By this method, it is affirmed, gold may be removed from any metal, even from iron, without injuring it in the least. This method is no doubt an effective one but will require close watchfulness on the operator's part to prevent the solution of the underlying metal. Mr. Wahl says that he prefers the several methods of Roseleur, in which sulphuric acid is used. Martin Brunor says when it is desired to strip gold from any metal, it will be found more difficult to strip fine gold than lower grades. If the stripping is done by the electric process, the cathode or sheet of copper should be double the size of the object to be stripped. The dynamo used for this purpose should not be less than 10 volts and 100 amperes.

THE RAMBLER'S NOTES.

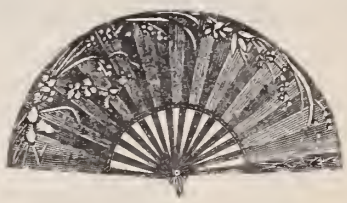
WHAT THE RAMBLER SAW AND HEARD AMONG THE DEALERS IN ART POTTERY, CUT GLASS, BRONZES, ETC.

NEW DECORATIONS IN ENGLISH CHINA.

A POPULAR priced line of china, just received in New York by Davison Bros., American agents for several leading English china and glass manufacturers, 12 Barclay St., shows a return to the styles, decorations and shades in vogue a century ago. The ware is very simple and plain, but because of this it has a delicate and neat appearance not too frequently seen in modern china. It is called the blue figure ware, as the ornamentation consists of a blue figure somewhat similar to a *fleur-de-lis* raised in relief on a perfectly plain and smooth background. This figure is about the size of a sweet pea blossom and does not cover the piece too closely. The pieces are made up into shapes peculiar to the early part of the last century, which are full of curves and stand high from the table on a foot or pedestal bottom. The firm announces that the line is becoming very popular. Among other lines some Adderley china just received shows richness in gold, crimson and other high color designs both in figure and floral effects. The feature of these designs is the peculiar effect produced by the irregularity of treatment on the panel of the plate or plaque which it decorates. This vignette by virtue of the peculiar combination of solid bands of gold or crimson is cut up into fantastic shapes so that the entire interior of the plate almost seems to have an irregular shape. Most of this ware is made into plates and tea and coffee sets. Another variety of china that is creating something of a sensation is that known as the Dragon pattern and shows a gold or silver dragon applied to the plate and border in a strikingly realistic manner.

*

NOVELTIES IN WALKING STICKS AND PARASOLS.



WALKING sticks and fine umbrellas of every style and variety and showing artistic qualities can be found in the line manufactured by W. W. Harrison, 405 Broadway, New York. A particularly striking style of walking stick is made of partridge wood mounted in sterling silver and gold. These sticks are made round, square or twisted in general shape. Another popular style of mounting consists of silver pierced work of various designs. Gun metal handles decorated with silver appliqué work are among the latest goods shown by this concern, while another variety showing burnished copper handles with silver appliqué work is very attractive. The demand for Weichsel for silver trimmings is now greater, so the manufacturers say, than at any time during the last 20 years. Supplementing this line of walking sticks is a fine assortment of umbrellas and parasols, the handles of which have artistic mountings in solid gold and silver, which are occasionally combined very attractively with copper. A number of riding crops and other striking novelties akin to those already enumerated are also handled by this house.

*

NEW PEDELLETES AND PEDESTALS.

A NUMBER of new pedelletes or combined jardiniere and pedestal are among the features of the line introduced by S. A. Weller, Zanesville, O., whose New York ware rooms are at 37 Park Place. They are made up in the style of the concern's regular Rubina ware, which consists of a multitude of different shades and hues, blended in such a way that the colors appear to be splashed on without method. The decoration is chiefly noted for the absence of sharp contrasts of color, the different shades being graded one into another so as to produce something of a grain effect frequently seen in the finish of fine oak and hard wood. This is particularly true in regard to panels on the sides of the pedestals and the jardiniere bowls. The space between these panels is ornamented with figure and floral decorations in relief, and occasionally the panels themselves show in relief representations of historical scenes, famous buildings or landscapes. A number of these now on display have decorations showing the Brooklyn bridge, the Capitol at Washington and Niagara Falls. The pieces are shaped like a combination of a jardiniere and pedestal, except that instead of a sharp break where the two pieces would come together there is a gradual widening of the top of the pedestal into the bowl of the jardiniere. This gives the top of the pedestal a sort of trumpet effect. The bowl is gracefully shaped and is likewise practical, as the neck is so fashioned that it will admit of a flower pot almost exactly the same diameter as the jardiniere itself. The bottom of the pedestal has a wide spread and flares gracefully like the top. The base and also the top of the pedestal is ornamented with the decorations already described. The panels on the pedestal occur just before the flare at the top begins, and the panels on the jardiniere run round its longest circumference and are separated by

a decoration similar to that which ornaments the pedestal. The whole piece has a deep underglazed effect and in general tone is quiet but extremely artistic.

THE RAMBLER.

China as a Market for Rose Quartz and Jade.

AN official report says that among other things that are esteemed by the Chinese may be mentioned jade and colored quartz. A translucent jade of deep brilliant green is almost priceless, as much as $7,000 having been paid for a thumb ring. A transparent deep rose-colored quartz is almost as costly.

The writer of the report in question does not know whether green jade is found in America or not, but he believes the rose quartz must be plentiful. The latter would find a ready market in Tientsin, but it must possess transparency and a brilliant rose color. Some of our mineralogists, he says, should send a few specimens for trial. Should these stones prove to be identical with those admired by the Chinese, the market should be carefully manipulated, so as not to lower the price. In fact, the policy of the De Beers Co. to maintain the price of diamonds should be imitated, only with greater circumspection, since a monopoly cannot be enjoyed.

A Novel Watch Crystal.

WHEN the late Gen. Macdonald last visited his relatives in Scotland he wore a very curious watch, says an exchange. The curiosity did not lie in the watch itself, which was of large size, but in the glass, which was rough and thick, but served its purpose as well as another. Macdonald was very proud of this glass and told its story with much circumstance.

One day during the Soudan campaign he had broken the original glass, and was puzzled to find a substitute for it in the desert. At last, however, he smashed a tumbler. The bottom he ground on a stone until it was fine enough, and the size he shaped until it fitted tightly into the setting. And so good was the handiwork that it lasted until he returned home. He never had it removed.

A contract whereby certain parties agreed to "introduce, sell and prosecute the introduction and sale of" certain goods and to "use due diligence" in such introduction and sale, does not amount to a warranty that the goods will become popular with the public and be purchased generally, but is satisfied, if they are put on the market, brought to the attention of the public, and an effort made to sell them. (61 N. E. Rep. 759.)

Rare Minerals for the St. Louis Exposition.

ACCORDING to reports from Washington, great preparations are being made by the geological department of the National Museum for the exhibit at the St. Louis Exposition. The exhibit will not be the most pretentious in size ever made by the division, but it will be the best selected and most representative collection of minerals ever shown in the country.

Agents of the division have been on the lookout everywhere for unusually fine specimens and have succeeded in obtaining some that have greatly pleased those in charge of the exhibit. Recently three beautiful quartz specimens were received. The most impressive of the three is of white quartz and came from Hot Springs, Ark. It is hexagonal, about two feet from apex to base, and about 10 inches thick. The second specimen is a quartz crystal from Siberia, which has a peculiarly uniform smoky color throughout and a surprisingly regular conformation from base to apex.

Perhaps the specimen which will receive the most attention is an amethyst geode about two feet in diameter. Agate two inches thick has been hollowed into a saucer-shaped affair, the interior of which is filled with sparkling amethyst crystals of small size, but perfect color. Acid will be used to clean the crystals, and at St. Louis, it should be one of the most interesting specimens on exhibition.

Old Tower Clock of Niagara Falls Tolls its Last Knell.

THE old clock in the tower of the First Presbyterian Church, Niagara Falls, N. Y., has ceased its life of usefulness and will shortly be removed from its lofty position.

At a meeting of the Common Council, recently held in Niagara Falls, the trustees of the church called the attention of the board to the fact that the clock was not in good condition, in fact, had not been running for a long time. Local jewelers were consulted, but it was decided that it would be impossible to repair the clock.

As a last resort, a dealer in junk was requested to examine the clock and make an offer for it. The offer was too insignificant for acceptance and the old timepiece still stares down upon the gaping passerby, wondering what its ultimate fate will be.

R. Van Keuren & Co., Savannah, Ga., have a unique watch chain, which they are cleaning for a customer. The chain and fob are made of 30 gold dollars of uniform size, and each dollar is connected by four gold links. From the fob is suspended a $20 gold piece. The entire chain can be separated without in any manner damaging or mutilating the coins.

THE GOLDSMITHS' ART IN CASKET MAKING.

AMONG the cherished possessions of Field Marshal Earl Roberts are the many golden caskets which have been presented to him since he finished his successful campaign in South Africa. Of these, few, if any, are more beautiful and elaborate than the gold and silver gilt casket which came to him from the corporation of the City of Liverpool, in October last. Unlike the casket presented to Earl Roberts by the Ulster Association, which was illustrated in THE CIRCULAR-WEEKLY Jan. 21, the casket presented by Liverpool is not elaborately jeweled, the ornamentation being principally the work upon the metal and the beautiful enamel designs which appear throughout the piece.

GOLD CASKET PRESENTED TO EARL ROBERTS BY THE CORPORATION OF LIVERPOOL.

As will be seen from the illustration, the design is carried out in the style of Viani, and the lines are eminently artistic in every detail. The general outline is that of an oblong with projecting ends, or pedestals, upon which rest finely modeled allegorical figures, the angel on the left hand holding a palm branch representing Peace, and that on the right hand representing War. At the center of the casket appear the full arms of the City of Liverpool, enameled in colors, and on either side appear the Star of St.

(*Continued on page* 11.)

HAVE YOU SEEN "THE RAPHAEL?"

There is nothing a Jeweler needs in his stock more than handsome patterns of flat ware, fancy spoons, etc., so suitable for presents.

"THE RAPHAEL," a small sized berry spoon here illustrated, is particularly suitable for this purpose. It is the handsomest figure pattern ever placed before the jewelry trade. A heavy weight pattern finished in French Grey and Rose Gilt, made in fancy pieces only, striking, very artistic and entirely original. Notice how the figure on the handle stands out; nothing could be more beautiful.

We also have complete sets of flat ware in other patterns.

The Goldsmiths' Art in Casket Making.

(*Continued from page* 1.)

Patrick and the Order of the Indian Empire, while above the arms is the Victoria Cross, surrounded by a laurel wreath supported by figures of boys bearing palm branches.

The body of the casket is divided into six panels, two on each side and one on each end, between them appearing a shamrock decoration, and above them a fish scale chasing. These and the applied figure of the Irish harp at the corners refer to the Field Marshal's Irish descent. The panels, which are in enamel, include, at the front, a fine view of St. George's Hall at Liverpool and the Government building at Pretoria, and, at the back, the Landing Stage and Exchange of Liverpool, while at the ends appear the Town Hall of Liverpool and the Government House at Bloemfontein. Between the two panels on the back are representations of the Order of the Bath and the Order of Merit, with an ornamental shield containing the inscription.

The top, or lid, of the casket is finely chased with a series of wave-like mouldings, dolphins and cherubs; the last are blowing trumpets and are supposed to be heralding the recipient's victorious career. On the front appear the initials, "F. S. R.," while at the top the lid is surmounted by a blazon of the Field Marshal's arms enameled in colors.

The lower portion of the casket has rich waved mouldings with a band of ornamentation in relief, and the lower moulding has the words, "Kandahar" and "Abyssinia," on the front, and "India" and "South Africa" at the rear. The lower part of the base is finished off with characteristic scroll work.

The casket is composed of 18 karat gold, the plinth and two figures only being of silver gilt. It stands upon a velvet pedestal and is fitted in a morocco case. The work was designed and manufactured by the Goldsmiths & Silversmiths' Co., Ltd., 112 Regent St., London, and was supplied to the donors through Henry Wainwright, Parker St., Liverpool. It is an exceptionally beautiful specimen of the English goldsmiths' work of the present day and combines almost every branch of high art work in the manufacture of presentation pieces.

American Watches and Cheap Jewelry Reported To Be in Demand in Tunis.

WASHINGTON, D. C., April 22.—Importations of American goods into Tunis are badly handicapped by the additional cost of indirect transportation and by commission charges. Many of our goods, however, are forcing their way into that market in spite of existing difficulties. For instance, our watches, clocks and cheap jewelry are held in stock in the Tunis shops and meet with a brisk demand.

If direct communication were established, even in a limited way, our goods could be placed so advantageously that we could secure the greater part of the trade. That country is compelled to import nearly all the manufactures used. Consequently, the field is open to our competition, and it is quite worthy of attention.

THE FIRST STEP in right selling is right buying. THE FIRST PROFIT IN RETAILING is the saving by wise selection of stock.

OUR FIRST SERVICE to you is in placing at your disposal a stock containing in unequaled abundance the goods that best suit your resources and patronage.

OUR NEXT SERVICE is our experienced aid to you in identifying and selecting this most suitable stock.

OUR THIRD AND GREATEST SERVICE is the assurance you take away with you that you have "bought right"—that you have secured reliable goods that suit your trade and at the most favorable prices the market can furnish.

WE STEER YOU PAST MISTAKES in buying; we know you can rely on yourself in selling.

OUR DIAMOND AND WATCH STOCK for spring trade is the cream of the world's markets. To see it is an education that will profit you.

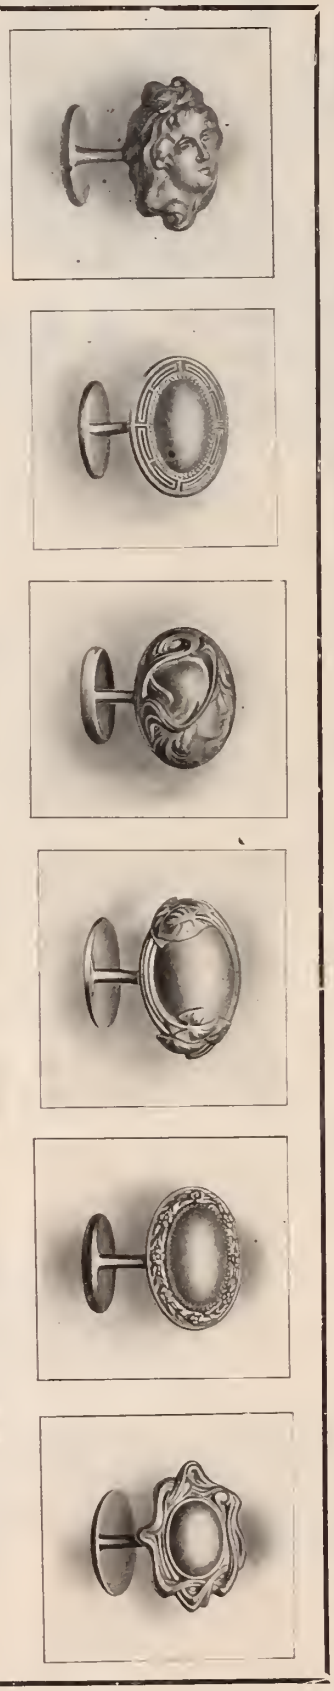
The New Cuff Button.

We are now putting on the market a large line of Cuff Buttons with a new construction.



The primary principle of this new button is having the bar at one side, making it easy to insert, readily removed, and holds cuff just right.

This construction also overcomes the difficulty of inserting a pair of buttons with four sides alike, as this style is just as easy to put in a cuff as one with a bean end.

We have complete lines of buttons with bean ends and buttons with four sides alike, all with this new bar.

We herewith show a few fine illustrations of new patterns with the bean end.

Many other patterns of both styles in the process of manufacture.

Larter, Elcox & Co.,
21-23 MAIDEN LANE, NEW YORK CITY.

Canadian Government's Tariff Policy And Its Effect on the Jewelry Trade.

OTTAWA, Can., April 22.—Hon. W. S. Fielding, Finance Minister of Canada, delivered his budget speech announcing the tariff policy of the government Friday. He said that the government had not been unmindful of the fact that there had been some agitation for a general revision of the tariff, but there was nothing in the present circumstances of the country which called for this and there were some strong reasons why any extensive changes in the tariff schedules would be inopportune, as the general condition of the manufacturing interests was highly prosperous.

There might be a necessity at some early date to make further tariff changes to those he had to propose but their extent and character might be to a considerable degree dependent upon the attitude of other countries toward Canada. While anxious to improve trade relations with the world at large, there were two countries with which they naturally would like to have intimate trade relations. He referred to Britain and the United States, saying that the American Republic was so near and so closely identified with Canada in many things that we must desire to have close and friendly relations with them.

The most important feature of the speech dealt with the obnoxious action of the German Government in the treatment of Canadian goods and the adoption of a retaliatory policy. He described the nature and effect of the "favored nation" clause of the German tariff and the terms of the new provisional treaty between Germany and Britain from the benefits of which Canada is particularly excluded. After five years of negotiation it was their duty to take steps to assert the rights of Canada to make trade arrangements with the mother country without admitting the right of any foreign nation to interfere.

He proposed to insert in the tariff a clause to the effect that when any foreign country treated the imports from Canada on less favorable terms than the imports from other countries there might be imposed on the goods of such foreign country a surtax, over and above the general tariff, such surtax to be one-third of the duty, so expressed in the general tariff. This provision was general in its terms and might be applied at any time to any foreign country treating Canadian products unfavorably.

"But," said the Finance Minister, "we propose to apply it immediately to the case of Germany and it will take effect as respects German goods in all the Custom Houses of Canada to-morrow morning—subject, however, to this reasonable qualification that it shall not apply to any goods which have actually been purchased by any corporation or firm or person in Canada prior to this moment for immediate transportation to Canada."

The words of the resolution embodying the retaliatory policy thus set forth are as follows:

Articles which are the growth, produce or manufacture of any foreign country which treats imports from Canada less favorably than those from other countries, may be subject to a surtax over and above the duties of Schedule A, such surtax in every case to be one-third of the duty as fixed by such Schedule A. Such surtax shall apply to any article the chief value of which was produced

in such foreign country, although it may have been improved or advanced in value by the labor of another country, notwithstanding the provisions of the British preferential tariff and regulations thereunder.

"Any question arising as to any foreign country or goods coming under the operation of this section shall be decided by the Minister of Customs, whose decision shall be final.

TORONTO, Can., April 22.—The adoption of a retaliatory tariff policy as against Germany announced in Hon. Mr. Fielding's budget speech at Ottawa yesterday has created a profound sensation in political and commercial circles here. Protectionists, though disappointed owing to the absence of any general changes in favor of higher duties in the tariff schedules, look upon the adoption of the retaliatory principle as an indication that protectionist ideas are making headway, and hope eventually to see the principle pushed further.

A representative of THE CIRCULAR-WEEKLY interviewed some of the leading importers connected with the trade to-day to ascertain how the change was likely to affect their business.

Walter J. Barr, manager of the Goldsmiths' Stock Co., said:

"So far as jewelry proper is concerned importations will only be slightly affected. The imports from Germany are principally cheap goods, many of them imitations of Canadian styles. Enameled goods bearing Canadian designs such as the maple leaf are made in Germany and largely sold here at a low price. Under the increased tariff Germany will still have the advantage in price on the same class of goods. This is also the case in regard to some lines of clocks. Musical alarm clocks, for instance, cannot be produced elsewhere at nearly as low a price as that at which they are imported from Germany.

"As regards other varieties of clocks, the trade will be affected, and cutlery will be seriously interfered with. Generally speaking, the Germans will be able to hold their own despite the increase in regard to articles which are German specialties, while as to those goods which are imitations or articles of a sort largely manufactured elsewhere the effects of the tariff will be heavily felt. Rope chains, for instance, of which many of German make are now imported, will be manufactured more extensively in Canada.

"The American manufacturer will reap part of the benefit. In the items of nickel clocks and cheap pocket watches in imitation of American styles the tendency will be to import more largely from the United States in place of ordering from Germany. The German manufacturer, however, will probably try to meet the retaliatory tariff by a cut in prices and recoup himself by reducing wages."

Edmund Scheuer said:

"The bulk of the jewelry importations from Germany are the cheaper lines and the action of the government is hardly likely to affect these to any appreciable extent. It will, however, be prohibitive, or nearly so, as regards gold goods, high class jewelry and nickel clocks, which latter form a considerable item in the trade with Germany. Gun metal goods will also be affected, as the discrimination against the

Germans will give the French manufacturers the advantage."

L. Herbert Luke, secretary of Ambrose Kent & Sons, Ltd., said:

"The cheap jewelry trade would have been a more important item a few years ago, but importations in this line have greatly declined recently, so far, at, least, as the regular jewelers are concerned, owing to the trashy quality of the German goods, though they are still largely sold at the department stores. As respects enameled goods, the effect will undoubtedly be to encourage home manufactures. So far as we are concerned, our trade will be but slightly affected, as we import little or nothing from Germany but articles used in manufacture of society regalia, which can be had as advantageously in France." He strongly approved the action of the government.

Lionel G. Amsden, of the Cohen Bros.' Co., Ltd., wholesale and manufacturing opticians, stated that his firm imported but few goods from Germany and those mainly in the cheaper grades. Whatever effect the change had would be in the direction of stimulating home manufacture and enabling their own lines to take the place of the imported articles.

The annual report of the Department of Trade and Commerce for the year ending June 30, 1902, gives the following figures showing the value of the principal dutiable articles in connection with the jewelry and kindred trades imported from Germany into Canada for the fiscal years 1901 and 1902:

ARTICLES.	1901.	1902.
Jewelry	$24,959	$37,660
Gold and silver, manufactures of.	42,418	33,107
Cutlery, all kinds	122,443	141,472
Optical, philosophical, photographic and mathematical instruments	8,301	13,493
Watches, and parts thereof	3,737	12,691

"Fancy articles" to the amount of $361,325 and $392,363, respectively, were imported in 1901 and 1902, but the great bulk of these were textile fabrics, toys, etc.

The following items, however, appear under this head:

	1901.	1902.
Bead ornaments	$6,489	$7,243
Fancy boxes, ornamental cases, etc.	18,977	14,266
Braids, bracelets, cords, fringes, etc.	110,034	109,368

The residence of W. H. Appel, Allentown, Pa., was slightly damaged by fire last week.

The case of W. S. Taylor, Utica, N. Y., against Isabelle Simpson, was tried before Justice Colegrove Thursday afternoon. The action, which is to recover $26, involved an exchange of a diamond ring and a loan of some money. The defense claims that the charge was against the husband, deceased, and that the wife was not responsible. It was also claimed that the borrowed money had been paid. The case was concluded and decision reserved.

Consul Ozmun Reports on the Trade Conditions of Wurtemberg.

WASHINGTON, D. C., April 22.—In a recent report to the State Department, Edward R. Ozmun, United States Consul at Stuttgart, gives a brief history of the conditions of the business in various industries of his district, in which he speaks particularly of the trades embracing jewelry, musical instruments and watchmen's detectors, among others.

Notwithstanding the prevailing commercial depression, says Mr. Ozmun, 1902 showed a slight improvement over the preceding year, in that many factories which were obliged to curtail greatly their force in 1901 have re-employed the workmen and striven sturdily to maintain a fitting place in the world of trade. With a rising market for raw materials and a falling market for their products, the lot of the German manufacturer has, generally speaking, been a troubled one. It will probably be some time before confidence is restored. There seems to be a general feeling of doubt regarding the effects of the new tariff law.

MUSICAL INSTRUMENTS.

The chief musical instrument exported from Wurtemberg is the harmonica, which is sold in greater quantities in the United States than in any other country. There are several large factories in neighboring smaller towns. One concern has one main factory and 15 branches in which are employed 1,500 hands. Much of the work is done at home by the employes. The annual output of this one concern has for several years past been about 5,000,000 harmonicas. Competition in this line is extremely keen and goods are often sold for unusually small profits in order to hold the trade. The firms ship direct to all their customers in nearly every country in the world. It is said that the harmonica manufacturers intend to send an exhibit to the St. Louis Exhibition.

JEWELRY.

The manufacturers of jewelry in this district have only recently begun to turn their attention to the United States as a field of export, although the neighboring country of Baden has for many years sold largely not only to the United States, but also to Porto Rico and Cuba.

About six months ago, a large manufacturer of jewelry in this district sent a member of the firm to the United States to study the market. He took along with him a fine line of samples and succeeded in selling about $6,000 worth of goods. He considers these sales as merely sample orders, and expects to do a very satisfactory business in the near future. The firm has come to the conclusion that there is no market in the United States for cheap German jewelry, as the manufacturers there have better machinery; but on the other hand, it believes that the American manufacturer of jewelry cannot compete with the European in the markets of Europe. This firm expects to sell the finer grades in the United States, and realizes that it can be successful only by closely studying American tastes and conforming to American ways of doing business.

Both the English and the domestic markets have been dull in the last 12 months, and no great revival is expected for this year. It is thought, however, that the worst is over and trade will gradually recover. The orders received late in the Autumn indicate that the feeling is better.

WATCHMEN'S DETECTORS.

The business is in the hands of one firm, which exports largely to the United States, nearly every State in the Union supplying customers for this product. The export trade with America increased about 20 per cent. and its outlook for the future is bright.

Arthur M. Felson Again Examined in Bankruptcy Proceedings.

UTICA, N. Y., April 22.—The affairs of Arthur M. Felson, the Gouverneur jeweler, are slowly jogging through the bankruptcy courts. There will be a meeting of his creditors before Referee Tulloch at Ogdensburg, May 2, when there will be argued an order to show cause why Felson should not turn over about $20,000 for the benefit of his creditors. Felson is again working in the jewelry business at Gouverneur, claiming to act as the agent for Sig. Weis, of New York.

Felson was on the stand before Referee Tulloch on Saturday, and some of his testimony was quite conflicting. Eleven attorneys were there to question him, and Felson swore that on Oct. 10 he purchased some property in Hamilton St., New York, paying $8,200 down. In November he bought some property in Fifth Ave., paying $8,500 down. He also bought property on 61st St., paying $5,000 down. While Felson was making these purchases he was giving notes and other security for the $40,000 stock which he ordered. When the New York property was bought Felson said ' owed $20,000 on goods ordered before he failed. Felson got tangled when telling about his present business. He swore that Sig. Weis paid him $25 for services as manager. Later he said his wife paid him and finally he again said it was Sig. Weis.

Felson has been in Gouverneur for about one month. Evidence has been given showing that Felson sold stock below cost and at wholesale prices just before going into bankruptcy.

The Diamond Markets.

ANTWERP, April 10.—Notwithstanding the bad weather and the approaching Easter holidays, the Antwerp market shows a certain improvement as compared with last month. The presence of several foreign buyers is one of the reasons for this improvement. There is a good demand for "schilfers," of 70 to 85 francs per carat. The demand for two, three, four, five and six grain stones of best grade is unchanged.

The following buyers were at the "Diamant Club" last week: Messrs. Lauterbach, Rees and Dreyfus, of New York; Messrs. Strauss, Frier and Urbanech, all of Frankfort-on-Main, and Mr. Langbanck, of Paris.

It is the general opinion of our merchants that April and May will prove satisfactory months with the diamond men.

There was talk again last week of the beginning of a strike of the diamond employes, in order to obtain a nine-hour workday, instead of 10 as now. The strike was to have begun last Monday, but so far all the men remain employed. It is hoped that the unfortunate agitation of two years ago will not again take place.

The officers of the diamond department of the "Chambre de Commerce d' America" are as follows: M. Wauters, president; J. Kryn and J. Walk, vice-presidents; Chas. Van Antwerpen, secretary; M. Daniels, treasurer; G. Antoine, Ad. Adler, A. Lehrfeld, M. Tom, J. Van den Bosch, counselors.

A. Bonard, a diamond merchant of this city, died April 8, aged 57 years.

AMSTERDAM, April 9.—The market here is very quiet now, owing to the general strike of carriage workmen in Holland. Correspondence and traveling have become very difficult this week. A large number of diamond employes have stopped work also, notwithstanding the request of the officials of their unions to wait until the publishing of a letter of directions. Several merchants and jewelers, fearing the strike and its consequences, refused to give out goods to be cut by their workmen. However, some sales were made last week, the buyers being principally Americans, who bought mêlée.

LONDON, April 9.—An improvement has been observed in the gem market here during the past few days. A number of sales were made in fine brilliants of two to seven grains. There is talk again of another rise of 5 per cent. on rough diamonds. It is unnecessary to say that the market is very firm.

Pearls continue to be very high and New York houses are giving orders for these gems.

PARIS, April 9.—The fine weather has had a good effect on our trade in general and considerable business was done in the precious stone trade last week.

The reports of a new increase in the price of rough make it easy to sell such cut goods as have been bought at the old prices. Mr. Ullmann was among the large buyers of flat goods here.

Messrs. Arons and Pompé returned from Antwerp, where they made large purchases. Several foreign buyers were also here last week, and their presence lent a firm tendency to the market.

The demand for colored stones was somewhat quieter at the end of March, but at present they are held at the old prices.

Medals Presented to Members of the New York Stock Exchange.

Six medals of solid gold were presented by the New York Stock Exchange to its building committee in commemoration of the completion of the new building at the dedication exercises held Wednesday in New York. The medals, which were made by Tiffany & Co., New York, show beautiful relief work and they are notable examples of the advance made in metallic art in this country. Each medal measures five inches in diameter and weighs about 320 pennyweight each. On one side is shown a picture of the Exchange and on the reverse a wreath of laurel symbolizing success enclosing the following inscription: "The New York Stock Exchange to (name), in grateful recognition of services rendered during the construction of the Stock Exchange building, MDCCCCIII."

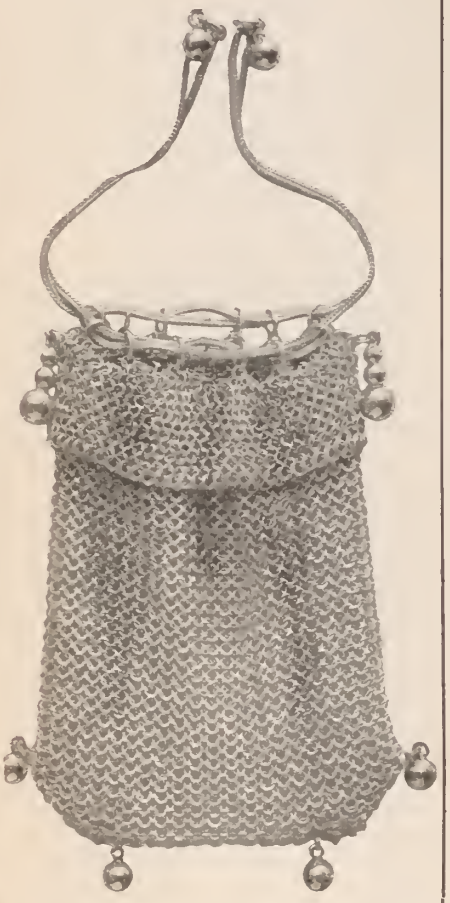
TRADE MARK.



Leather is King

FROM the realm of utility, leather has invaded the realm of beauty and conquered it; and is now supreme in both utility and beauty. The truth of this is demonstrated by the splendid line of leather goods made by this house for the jewelry trade. First in the royal family of leather come Bags of every description for the *grande dame.* She also demands Purses for her money, Boxes for her jewels, Letter Cases for her polite correspondence and Card Cases for her calls on the *elite.* Thus leather is a "leader in society." It comes in dainty colors to suit my lady's gowns, and with artistic designs to please my lady's eye. And the wise jeweler joins with other subjects of the realm in paying homage at the Court of King Leather.

Smuggled Diamonds Forfeited.

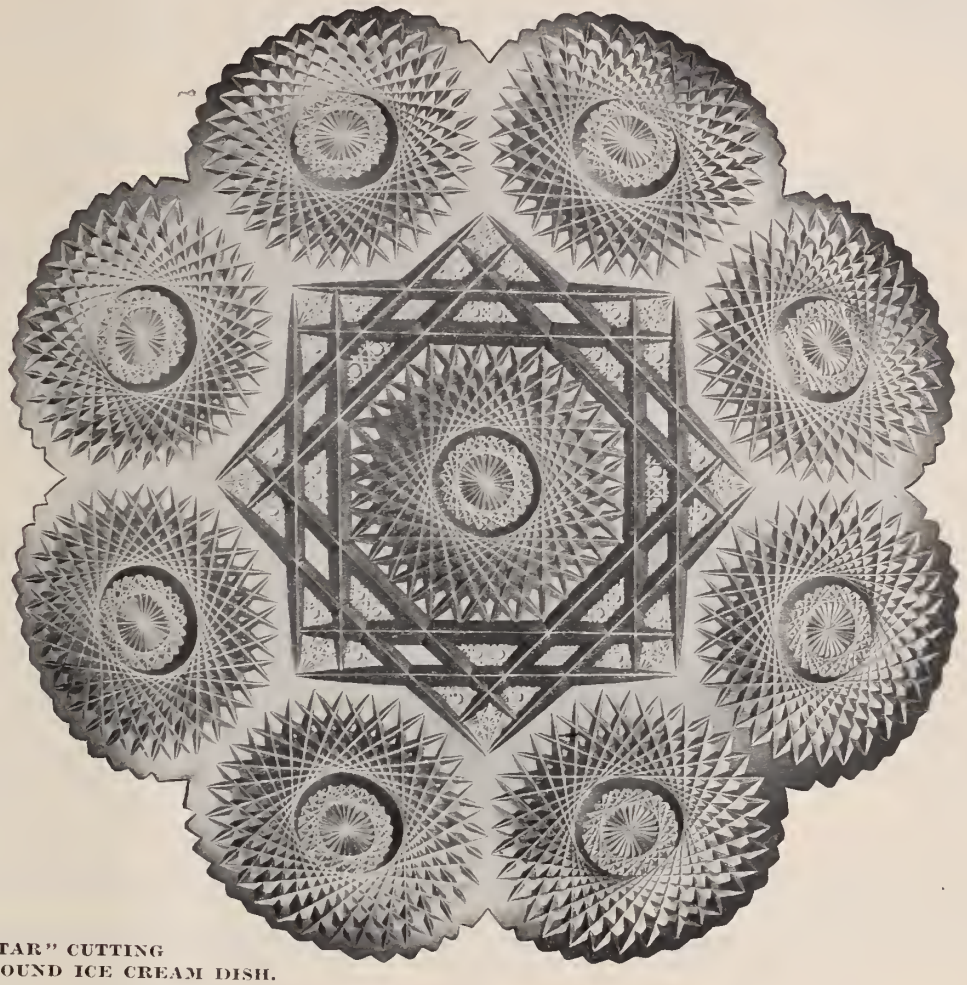
Jury Decides Against Claim of Wm. Goldwasser To Diamonds Seized From Michael Leinkram.

The attempt of Wm. Goldwasser, of Antwerp, to get possession of the $27,000 worth of diamonds seized Feb. 23, 1902, from Michael "Leinkram," which was begun in the United States District Court, of New York, April 16, resulted Thursday in a verdict for the Government. The most interesting point in the trial was reached Thursday when "Leinkram" himself, who had been brought from the Elmira Reformatory under guard on a writ of habeas corpus took the stand and testified as to how the diamonds which were seized from him came into his possession, and also told of his connection with the alleged conspiracy to get them into New York, free of duty. "Leinkram's" presence was the result of a lively tilt in the court Tuesday of last week between Assistant United States Attorney Baldwin and Abram J. Rose of counsel for claimant. This argument and the circumstances which led up to it, were briefly outlined in the last issue of THE CIRCULAR-WEEKLY.

When the case opened Tuesday, Wm. Goldwasser, the claimant, was put on the stand and cross-questioned by Mr. Baldwin as to his transactions with Zinner in Antwerp. Nothing worthy of note grew out of this cross-examination. Following Mr. Goldwasser on the stand, came Christian Dimmig, who, at the present time, is the claimant's business partner. Mr. Dimmig testified to having seen the diamonds in question weighed and the records thereof transferred to the memorandum paper. He also testified to having seen Zinner sign the memorandum.

At a former session of the trial Goldwasser had testified that Zinner's handwriting alone appeared on the memorandum, he having written both the body of the memorandum and signed his name thereto. In rebuttal of this evidence, Mr. Baldwin now put Mr. Carvalho, handwriting expert, on the stand, and asked his opinion as to whether or not the body of the memorandum and the signature thereto were in the same handwriting. Mr. Carvalho stated emphatically that they were not.

The next witness in the case was Gen. Mindil, examiner of precious stones for the Port of New York, who was called by the Government in rebuttal of Goldwasser's testimony, to the effect that only a part of the diamonds in question was suitable for the American market. Mr. Mindil stated positively that all the stones were suitable for the American market, and that shipments of that quality and variety of diamonds for the American market were passing through his hands almost daily.



Mr. Baldwin then moved that the Court direct the jury to find a verdict in favor of the Government. In support of this motion Mr. Baldwin used practically the same arguments advanced by him when, earlier in the trial, he had moved for a judgment on the case without submitting it to the consideration of the jury. And in replying to this motion, Mr. Rose answered practically the same as on that occasion. The Court after weighing the question carefully, was about to grant the motion, when Mr. Rose asked permission to reopen the case, for the purpose of introducing the testimony of Michael "Leinkram," whom, he said, he would obtain from the Elmira Reformatory on a writ of habeas corpus, and have him in court inside of 48 hours. A hot debate between Mr. Rose and Mr. Baldwin then ensued, but the Court eventually granted Mr. Rose the favor he sought.

Thursday morning when the court opened, "Leinkram" was immediately put on the stand, and furnished some interesting information concerning the alleged conspiracy to get the diamonds into New York. He said that he had lived in New York about a year and a half before he was arrested for smuggling the diamonds. About the last of January of 1902 he said he went to Bremen. In Bremen he met Zinner, after having written him in Antwerp. Zinner, he said, had advised him not to remain in Europe, and had induced him to go back to America. This inducement, "Leinkram" said, consisted of a return ticket to New York and $60 in cash which Zinner gave him. About 15 minutes before he sailed for the United States, Zinner produced the flannel belt which contained the diamonds, and which was found strapped about "Leinkram's" body when he arrived in New York, by Special Treasury Agent Theobold. Zinner told him, he said, that the belt would keep him warm while on the steamer; he did not tell him what was in it, although it was very apparent at the time he took it that something was in it, as he could feel the packages with his hand. Zinner told him, he said, to take this belt when he got in New York and deliver it to a man at 42 W. 116th St., New York.

"Leinkram" admitted that his real name is Hochberger, and that he is a brother of Isidore Hochberger, a New York diamond dealer. "Leinkram" said that he had changed his name from Hochberger to "Leinkram" when he left New York, as it was his original intention to go back to Austria, where he had formerly lived, and that if he appeared there under the name Hochberger, he would be arrested as soon as he arrived and made to serve in the Austrian army, as he had run away from that country without serving his time. Mr. Baldwin asked the witness why he did not go on to Austria as he had originally intended, instead of stopping at Bremen, and "Leinkram" replied that after getting a letter from Zinner, whom he had known in Austria and who was a brother-in-law of his brother Isidore Hochberger, he had changed his mind again. The witness said emphatically that he did not know Wm. Goldwasser and had never seen him

Mr. Baldwin placed Mr. Theobold on the stand, and the latter declared in rebuttal of "Leinkram's" testimony, to the effect that he did not know Goldwasser when he saw him, that he had seen "Leinkram" bow and smile to Goldwasser when he appeared in the court room that morning. Immediately upon this testimony, Mr. Rose became greatly concerned and took the stand in behalf of the claimant. He said that he had spent the few minutes before the opening of the court that morning in consultation with his client in the court room, and that his client had not seen or recognized "Leinkram" during that time.

Mr. Baldwin then asked the Court to

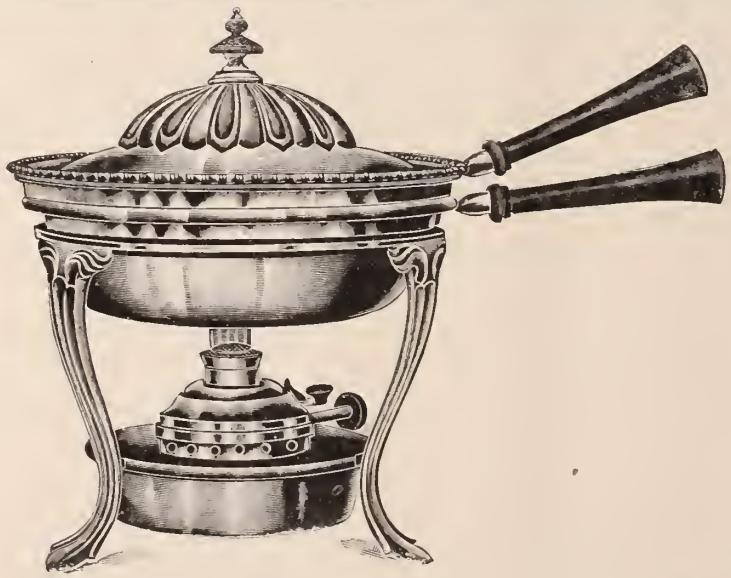
direct the jury to find a verdict for the Government. This the Court refused to do, and both attorneys then summed up the case before the jury.

In charging the jury, Judge Holt took occasion to review certain parts of the evidence in the case. He said that the burden of proof as to the ownership of the stones and the absence of conspiracy on the part of Goldwasser to have them brought into New York free of duty, was upon Goldwasser. He said that the case was a very important one, that it was very difficult, both for the Government and for the claimant. He said that Goldwasser had not attempted to prove or to bring out certain points which seemed essential for his side of the case. Goldwasser's failure to get any kind of evidence whatsoever from Zinner, or evidence from his wife as to whether or not she sent the cablegram; evidence as to his and Zinner's standing in Antwerp, and his failure to prove why he was willing to trust Zinner with more than half of his stock; his utter ignorance of the man in Berlin to whom Zinner was to sell the stones, and his (Goldwasser's) leaving for New York so soon after entrusting the stones to Zinner; his failure to show that his (Goldwasser's) wife was in possession of a code book; his failure to show that a private code book was necessary, when there were so many printed ones that would seemingly answer his purpose on the market; his failure to show why part of the telegram should be written in French and part in cipher, when all could have been in cipher, and his failure to explain that part of the cablegram as to why he should go back to Antwerp, when his diamonds were in New York, must all be taken into consideration by the jury.

The jury retired, and later returned with a verdict in favor of the Government.

Creditors Elect Leon Nordman Trustee of Rudolph Barth.

A meeting of the creditors of Rudolph Barth, a retail jeweler, of San Francisco, Cal., was held last week in the rooms of the Jewelers Association and Board of Trade, 170 Broadway, New York, and Leon Nordman, of Nordman Bros., 134 Sutter St., San Francisco, was elected trustee to take charge of the store and dispose of the goods of the bankrupt jeweler.



Barth gave a bill of sale to Mr. Nordman the first week in April, for the benefit of his creditors, and it was thought by the creditors at the meeting that they could do nothing better than to elect Mr. Nordman trustee.

Death of John B. Powers.

OLD ORCHARD, Me., April 22.—John B. Powers, optician, died at his home in Old Orchard yesterday, aged 57 years. Mr. Powers left the beach last Fall and was apparently in excellent health, but he was taken seriously ill in the Winter.

He purchased a residence on Staples Ave. a year or two ago, and intended to make Old Orchard his permanent Summer residence. The deceased is survived by a widow.

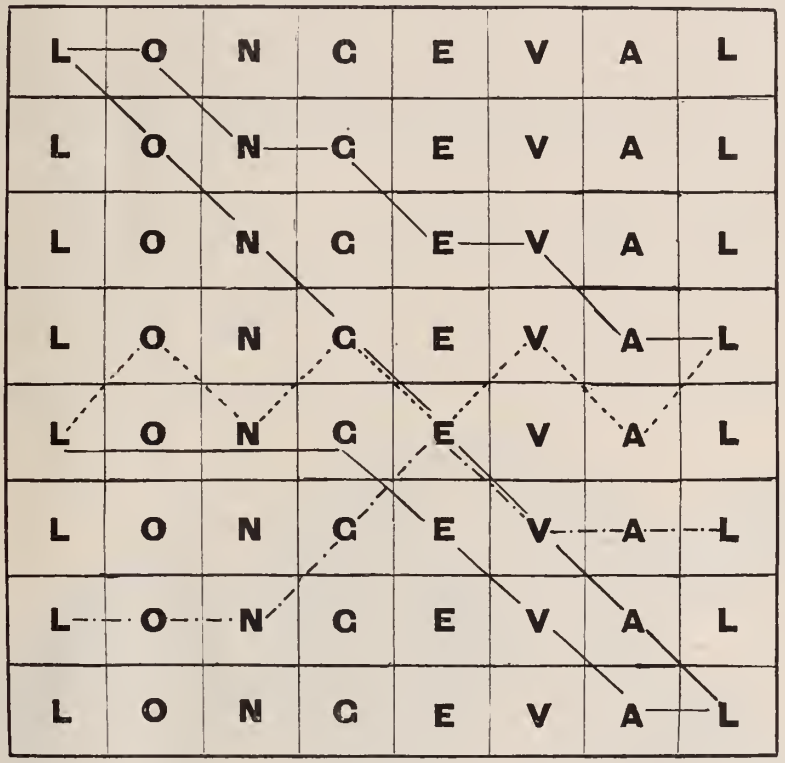
Death of William Fenton.

BOSTON, April 27.—William Fenton, New England manager for the Wm. L. Gilbert Clock Co., died at his home, in Wollaston, Tuesday, April 21, after a long illness. The immediate cause of his death was heart disease, but he had been confined to his bed with paralysis for several weeks.

The announcement of Mr. Fenton's death was received with feelings of genuine regret

THE LATE WILLIAM FENTON.

and sorrow by the members of the trade in this city who had the good fortune to know him, and these were many, as he had been identified with the jewelry business in this city for the last 19 years.



Mr. Fenton was born in Scotland, and his first line of work was in connection with the trade in his own country. At the age of 17 he was a traveling salesman for one of the largest firms in Edinburgh. Business transactions brought him to America in 1881, and three years later, in 1884, he settled in Boston, where he was actively engaged in the clock business, until his illness necessitated his confinement about two months ago. Mr. Fenton's first position in this city was as agent for the New Haven Clock Co., in which capacity he served for about 10 years. In 1849 he became the New England representative of the Wm. L. Gilbert Clock Co., and continued as such until his death.

Funeral services were held from his late residence, 354 Beale St., Wollaston, Sunday, Rev. E. D. Webber, pastor of the First Baptist Church of that place, officiating, assisted by the Rev. Preston Gurney, former pastor. The services were largely attended by prominent jewelers of Boston and elsewhere, as well as by a large number of friends and neighbors in Wollaston, by whom the deceased was held in high esteem.

Mr. Fenton leaves a widow and 11 children. Two of his sons also hold positions with the Wm. L. Gilbert Clock Co., J. B. Fenton being in the New York office, and William Fenton, Jr., being a traveling salesman, representing the house in the south. A brother of the deceased is one of the largest wholesale jewelers in Scotland.

Prize Contest

FOR WATCHMAKERS.

THE CONTEST consists in spelling the word "LONGEVAL" in various ways, from the above table, using consecutive letters, either across, up, down or diagonally. A few ways are suggested by the lines in the table.

THE PRIZES. To each of the five contestants, spelling the word "LONGEVAL" in the greatest number of ways, will be given 1 gross of Longeval Mainsprings AND A CABINET, absolutely free, express prepaid. In case of one or more contestants sending in the same number of ways, the prizes will be given to the answers first received, and most easily decipherable.

SEND FOR duplicate copies of the table and in sending replies, use a separate sheet for each initial letter, viz.: all beginning with the first "L" on one sheet; all beginning with the second "L" on another sheet, etc.

THE CONTEST WILL CLOSE JUNE 10, 1903.

Hammel, Riglander & Co., Importers,

35 Maiden Lane, New York.

The Longeval Mainspring for American Watches is the best on the market. It is so packed that it is protected from rust and climatic changes, and so that only one spring need be handled at a time instead of a dozen. Every spring is fully guaranteed.

ORDER A SAMPLE DOZEN FROM YOUR JOBBER.

Bostwick Bill Did Not Pass.

Act to Regulate Gold Stamping Crowded Out in Last Hours of the New York Legislature.

ALBANY, N. Y., April 25.—Assemblyman Bostwick's bill, to amend the Penal Code in relation to stamping or marking articles manufactured of gold or any alloy of gold died in the Committee of General Order in the Senate Thursday. Every effort possible was made to have the bill passed, but the action of the three independent Senators at the session on Monday night, April 20, in holding up all bills, was the direct cause of the Senate being unable to consider this measure.

Since the introduction of the bill, up to the time it was cast aside in the committee, the advocates of the measure took a large amount of interest in it, and avoided any and all delay in the progress of the bill. It was arranged to have it passed before the session adjourned, and everything appeared favorable for this plan until Monday night, when the Senate calendar went to pieces, and no bills were considered. If the programme arranged for Monday night for the passing of a batch of bills had been carried out, the Bostwick measure would have been in order to receive consideration on the following Tuesday or Wednesday; but as it was not, when the Senate got down to business, there was only time left to pass and discuss the most important bills, and others of lesser importance were left to die.

The Bostwick bill was approved by nearly every member of the Legislature. In the Assembly, at the time it was passed, it met with little opposition, and there were few bills introduced in either house at this session that made the headway that the Bostwick bill did. It was brought before the Assembly late in the session, and was in line with bills that were introduced several weeks before.

All the large jewelry manufacturers and business stores throughout the State were in favor of the bill, and urged its passage. Several prominent firms of New York sent a petition to Mr. Bostwick and to the Legislature, favoring the bill.

In speaking about the Bostwick Gold Stamping Bill Monday, F. L. Crawford, of G. H. & F. L. Crawford, the attorney who has championed the bill from its introduction and took charge of the measure before the Legislature, explained to a CIRCULAR-WEEKLY reporter the reason for its failure to pass.

"My arrangements for having the bill passed were quite perfect," said Mr. Crawford, "and there is no doubt whatever that it would have gone through had it been possible to reach it, but the delay caused by the "insurgent" Senators, and particularly their action in procuring an adjournment of the Senate April 20, without doing business, caused the loss of practically three legislative days and made it impossible for the Senate to take up any bills which were on general orders in the Committee of the Whole, and our bill, with a great number of other private and public bills in the same position, was left unacted upon."

W. Myers, Kutztown, Pa., has moved from the Ramer building into his new location on Main St., which he recently purchased from the Lewis Fisher estate. Mr. Myers intends to erect a large open front to the store.

A $500 jewelry theft was discovered in Leopold Reinheimer's establishment in Joplin, Mo., last week, and two negroes, Ed. Henley and Wm. Dale, are under arrest, charged with the burglary. Henley had formerly been a porter in the store. Some of the jewelry has already been recovered.

Haas & Voigt File Bankruptcy Petition to Get Rid of Old Debts.

WASHINGTON, D. C., April 24.—Chas. Haas and Edward Voigt, formerly trading as Haas & Voigt, have filed a voluntary petition in bankruptcy in this city. In their petition they set forth that from October, 1883, until 1891, they were engaged in the jewelry business at 713 7th St., N. W., as copartners; that in 1891 the copartnership became insolvent and went out of business, the petitioners having on Jan. 13, 1891, made a voluntary assignment to Owen E. Duffy. The debts contracted by the copartnership were not paid in full, and there was no final settlement of the copartnership business. The firm still owes the debts on account of said business, many of which are now barred by the statute of limitations, and other debts which have been kept alive by means of judgments and other proceedings, which are provable. The petitioners are unable to pay the copartnership debts in full, but they are willing to surrender all their property for the benefit of their creditors, except such as is exempt by law, and desire to obtain the benefit of the bankruptcy law.

The liabilities are $11,020.55 and there are practically no assets. There are bills receivable due the firm to the amount of $2,000, which are barred and uncollectable. Mr. Haas has an interest in his father's estate, now being settled, but when all debts against said estate are paid his share will not amount to over $50.

The creditors, nearly all of whom hold judgments, are as follows: Jandorf & Bro., $250; Waterbury Watch Co., $213; Jacot & Son, $167; Kuhn, Doerflinger & Co., $346.09; Chas. A. Brickwedde, $400; New Haven Clock Co., $378.36; Henry Lightwardt, $2,000; Hartford Silver Plate Co., $493.31; Bradley & Hubbard Mfg. Co., $206.04; Weis & Oppenheimer, $304; H. Z. & H. Oppenheimer, $354; Philadelphia Optical and Watch Co., Ltd., $926; Stern Bros. & Co., $357.55; Jandorf & Bro., $395.96; Odenheimer & Zimmern, $496.89; I. Michelson & Co., $270.75; M. D. Rothschild, $211.16; Rogers, Smith & Co., $1,036.19; Max Freund & Co., $1,007.95; Alois Kohn & Co., $217.02; Chas. Knapp, $500; Henry Fera, $300; Thos. G. Hensey, $575, and E. Adler, $162.

The Court has referred the case to E. S. McCalmont, referee in bankruptcy.

THIS WEEK—16,000 JEWELERS

WHO ARE NOT SUPPLIED WITH "1847 ROGERS BROS." GOODS DIRECT FROM FACTORY WILL RECEIVE ONE OF THESE CARDS, PRINTED IN TWO COLORS:—

You can't miss the Mark

"Silver Plate that Wears"

You will find it on the silver plate that is most desirable in design, most suitable in style, most salable as to trade-mark. This stamp is a sign of old-fashioned, enduring honesty in the materials and making—new-fashioned energy and good taste in the finish. In handling Spoons, Forks, etc., make sure each piece is stamped

"1847 ROGERS BROS. XII"

With all the experience and skill gathered from half a century of silverware making by an organization financially as strong as most banks, is it not reasonable to suppose that our ware is a better and a more permanently profitable brand to handle than the weak imitations, "made to sell" without regard to quality?

The first question from the lips of persons wise in silver handicraft is getting to be, "Is it '1847 ROGERS BROS.'? If it is, it is all right." Made only by the successors to Rogers Bros.,

MERIDEN BRITANNIA CO., Meriden, Conn.
(INTERNATIONAL SILVER COMPANY, SUCCESSOR)

This card is the SEVENTH of a series of twelve—FIVE to follow—one each week.

EVERY LEADING JOBBER

Should be able to supply the demand, but an order placed in advance of immediate requirements will be advisable.

Formal Merger of the National Broadway, Seventh National and Mercantile National Banks.

The last act in the consolidation of the National Broadway Bank, the Seventh National Bank and the Mercantile National Bank was completed, April 21, when all the accounts of the National Broadway Bank were transferred to the books of the Mercantile National Bank. The Mercantile National and the Seventh National Banks were merged April 9. Out of the 40,000 shares of the National Broadway Bank, 37,000 voted in favor of the consolidation. Two shareholders holding a small number of shares voted against it. The consolidation is now in effect in full force, and the business of both the Broadway and the Seventh National Banks from now on will be conducted at the headquarters of the Mercantile National Bank, 191 Broadway, New York.

The consolidated bank will continue under the name of the Mercantile National Bank, will start with a capital of $3,000,000, and with a surplus and undivided profits of about $5,000,000. The price paid for the National Broadway Bank by the Mercantile National Bank was $3,000,000. Shareholders of the National Broadway Bank will receive one share of the Mercantile National Bank valued at $300 for every four shares of National Broadway Bank stock. Upon their option, however, they may take cash for their shares, in which case they will receive $75 in cash for each share, the par value of these being $25.

Frederick B. Schenck will continue as president of the bank. Miles M. O'Brien, formerly president of the National Broadway Bank, is first vice-president of the consolidated institution, and William H. Taylor, of the Bowling Green Trust Co., is second vice-president. James V. Lott is cashier and Emil Klein assistant cashier. All the clerks of the Broadway National Bank have been taken into the Mercantile, thereby greatly enlarging the force of clerks under the consolidation. The following are the directors: Frederick H. Schenck, T. Albeus Adams, William Ballin, Charles T. Barney, William F. Carlton, Robert C. Clowry, William Nelson Cromwell, William J. Curtis, Edwin Gould, William F. Havemeyer, Edward T. Jeffery, John F. Kehoe, Emanuel Lehman, Seth M. Milliken, Charles W. Morse, Miles M. O'Brien, William B. Putney, Dick S. Ramsay, Adolphe Rusch, George H. Sargent, Abraham Stern, William Skinner, William H. Taylor, Ernst Thalmann, Edward R. Thomas, Robert M. Thompson, Warner Van Norden, Isaac Wallach, John Skelton Williams, Richard Young, Augustus G. Paine.

Treasury Department Opens Bids to Supply Wall Clocks for Government Buildings.

WASHINGTON, D. C., April 24.—Bids have been opened at the Treasury Department for furnishing United States buildings under control of the department east of the Rocky Mountains, as the requirements of the service may demand, during the next fiscal year, with either eight-day pendulum or electric wall clocks, with 12-inch dials.

The bidders were as follows: H. T. Allen, mainspring clocks, $9 each; E. Howard Clock Co., No. 70, $11; Seth Thomas Clock Co., No. 2 regulator, $10.15; American Clock Co., No. 5B electric clocks, $19.25; No. 16B electric clocks, $21.25; Chelsea Clock Co., No. — pendulum, $10; No. 3 regulator, $12; Prentiss Clock Improvement Co., spring clock, $7.80.

Oppenheimer Bros., Kingston, N. Y., are inspecting the timepieces of the employes of the West Shore Railroad, for which they are the official watch inspectors.

Burglars Rob Store of Tallmadge & Dalton, Auburn, N. Y.

AUBURN, N. Y., April 22.—The jewelry store of Tallmadge & Dalton, at 53 Genesee St., this city, was entered by burglars early Monday morning, and jewelry valued at about $250 was carried away. The crime is supposed to have been committed by a gang who have been operating in this city in a small way for some time.

Entrance was gained through a window in the rear, which, owing to the fact that it was a considerable distance from the ground, was not strongly protected. The glass of this window was cut by one of the thieves, and this done, he must have loosened the fastening of the window and leaped into the store. Nothing bulky was taken, but a large quantity of small goods, consisting of opera glasses, plated chains, emblem goods, stick pins, fountain pens and similar articles were carried away. Before departing the thief or thieves removed the tags from the articles and left them on the floor.

The burglary was discovered shortly after 3 A. M. by a roundsman, who noticed that the light in the store had been extinguished, and going to the rear, discovered the window open and the thieves gone. Investigation showed that the safe of the firm had not been tampered with, only the articles in the show case having been taken. The only clue to the thieves is the muddy imprint of a foot, which the police have in their possession.

Geo. Brinckerhoff, son of Chief of Police J. D. Brinckerhoff, Middletown, N. Y., is a new apprentice in the store of D. W. Dusenberry, of that place.

Fred Huber, of Huber Bros., Dillon, Mont., who formerly conducted the establishment now owned by Chas. E. Goldsmith, Virginia City, was a recent visitor to the latter place, where he was calling on his old friends.

Leach & Miller, Attleboro, Mass.

From every part of the country, small towns, big towns, and cities alike, the calls for the Simmons Chain booklets have poured in, the total number has jumped by leap and bound into many thousands, and the first edition is wiped out. It's gone completely.

We are now turning off another large edition as fast as high speed presses can run, and by the middle of May we will be in position to fill this unprecedented demand.

In our advertising here and in the prospectus of our plans mailed you last month we told of the Simmons Chain booklets, told you that we would furnish you free with a reasonable number imprinted on the covers with your name and address so that you could mail them to your people, and thereby interest them in your store and in Simmons Chains.

The majority of dealers immediately saw the value of advertising of this kind, and the way they called for the booklets proved beyond the shadow of a doubt that they believed as heartily in the success of our co-operative policy to advertise Simmons Chains as they do in the goodness of the chains themselves.

Fred. L. Baker Pleads Guilty to Larceny Charge and is Sent to Prison for Three Years.

LANCASTER, Pa., April 23.—Fred L. Baker, the jewelry salesman who absconded in January, going to Brazil with a sample trunk containing about $18,000 worth of jewelry belonging to the Non-Retailing Co., of this city, for whom he was traveling at the time, to-day pleaded guilty in court to the charges of larceny as bailee, and embezzlement, and was sentenced by Judge Landis to three years in the Eastern Penitentiary, and to pay a fine of $1,500.

Before Baker was sentenced his counsel made an eloquent plea for leniency, arguing that Baker had not resisted return to this country, and the Non-Retailing Co. had recovered nearly all of its property as well as $1,500 which Baker had with him when arrested. He further stated to the Court tnat Baker had completely collapsed physically, and in the judgment of his doctors he would not live out his punishment.

Baker will be remembered by readers of THE CIRCULAR-WEEKLY as one of the best-known watch and watch case salesmen in the country. He was employed for 18 years by Hayden W. Wheeler & Co., New York, until about a year and a half ago, when irregularities were discovered in his transactions, and he was arrested on a charge of embezzlement. He was acquitted of this charge, and later entered the employ of the Non-Retailing Co., the officers of which, it is said, had confidence enough in him to give him a new trial. He was sent on the road by the Non-Retailing Co. with trunks and samples, sometimes valued as high as $25,000. Early in January, Baker wrote to his employers from Detroit, saying that he was on his way to Lancaster to close up his account for a period of several months. Several days later a customer from Columbus wrote to the company, stating that it had settled its accounts with Baker. Meanwhile nothing had been heard from him, and the concern becoming alarmed, asked the Jewelers' Protective Union to look him up.

This association employed Pinkerton detectives, who traced Baker to New York, and from New York to Brazil, where he was arrested Jan. 26, through the intervention of the State Department, and was brought back to the United States on the same boat on which he arrived in Rio de Janeiro. After arriving in New York he was taken to Lancaster for trial.

G. A. Howe, who was burned out at Duncan, Ind. T., is buying a new stock.

This is the house of very good taste,
Who forward their orders with neatness and haste.
If you have a call for goods you have not,
Drop them a line, ten to one they have got
Just what is wanted, as they're up to snuff:
The wide-awake firm of ELIASSOF.

AVERY & BROWN,

68 Nassau St., New York.

Death of Ephraim B. Nicewaner.

BALTIMORE, Md., April 25.—Ephraim B. Nicewaner, who was for many years a prominent jeweler of this city, died of heart failure Tuesday afternoon, at 4 o'clock, at his home, 329 N. Gilmore St. He had been ill for about a year. Mr. Nicewaner was a native of London County, Virginia, where he was born 66 years ago, and was a son of the late Jacob Nicewaner, of Harper's Ferry.

Mr. Nicewaner served his apprenticeship as a jeweler and watch repairer under the late Thomas G. Holt, in Hagerstown. At the age of 21 years he went into business for himself at Suffolk, Va. Later he came to Baltimore, and took charge of the watch department of Canfield Bros. & Co., which position he retained until the dissolution of the firm, about 20 years ago. He then entered the employ of Weist Bros., who succeeded Canfield Bros. & Co., in a similar capacity, retaining that position until about six years ago.

The funeral took place Friday morning, the services being conducted by Rev. Conrad Clever, of the Third Reformed Church, assisted by Rev. F. T. Togg. The pallbearers were Messrs. Samuel Golibert, Alexander Cook, Ezekial Grey, Blessing Brown, Lewis Houghton and J. O. Maynard. Interment was in Loudon Park Cemetery.

C. C. Gere, Urbana, Ill., has declined the candidacy as member of the school board of that place, declaring that his business duties will not allow him to accept it.

Granger, Tex., Jewelry Store Robbed of Watches and Rings.

GRANGER, Tex., April 22.—Some time Monday night burglars gained an entrance into the jewelry store of Nunn & Pope, and secured jewelry valued at more than $1,000. The thieves got in through the rear door, and carried away a large number of watches, rings and chains from the establishment.

The jewelry business is located in the front of the drug store of Herbert Pope, but nothing relating to the drug business was carted away. The police are now working on the case, but have not reported that they have any clue as to who committed the burglary.

Body of Watchmaker Found in an Arkansas River.

VAN BUREN, Ark., April 22.—The body of John Lind, a jeweler and optician, who worked in this city for several months, was found in the river about 20 miles below this city early yesterday morning.

Lind was last seen about 10 days ago, and had then been drinking hard, and was in a state of collapse. He is supposed to have fallen in the river while under the influence of liquor.

The deceased was well educated and came of a good family, in Iowa. He was a member of a Masonic order.

Wm. J. Pick, Jewelry Salesman, Accused of Larceny by His Employers.

PITTSBURGH, Pa., April 25.—William J. Pick, stock clerk for Gattle, Ettinger & Hammel, diamond importers, of 68 Nassau St., New York, was arrested in this city to-day charged with the larceny of a large amount of diamonds. The arrest was made at the request of New York authorities by Detectives William Elmore and E. E. McGough, of the Pittsburgh Detective Bureau. It is said that Pick was just on the point of leaving for South America. He acknowledged the theft to the officers, and with his wife, was taken to-night to New York by Detective James McVey, of the New York Detective Bureau. Pick had been hiding in Allegheny, it is said, at the home of his wife's parents.

Pick is 29 nine years old, and was a trusted employe of the firm with which he had been for 17 years. The detectives state that his peculations had been going on for three or four years. Recently the firm missed a large number of diamonds when an inventory of the stock was taken, and Mr. Hammel, of the concern, so the detectives state, spoke to Pick about the missing stones, but the clerk turned the matter off by saying that there might have been some mistake in checking them up. The members of the firm put a detective to work on the case, and in a few days the clerk was seen to pawn six large diamonds.

The clerk was not questioned at the time, for the firm wanted to make a more thorough investigation. A few days ago Pick went out to lunch and did not return. Detective McVey went to his home, which was in a handsome flat in Harlem, but found there only the man's wife, who was surprised when informed that her husband had taken flight.

Mrs. Pick's home before she was married was in Allegheny, and she told the detectives that possibly her husband had gone there. Accordingly, she left for that city in company with Mr. Hammel, of the concern, and Detective McVey. The three arrived in this city at noon. They went to the office of Superintendent William McQuaide, at the Central Police Station, and Mrs. Pick agreed to go to Allegheny to get her husband.

Detectives Elmore and McGough, of the local staff, followed the woman to that city, and when she and her husband returned across 6th St. bridge they were placed under arrest and taken to the Central Station. After they were questioned by Mr. Hammel and the officer, Pick is said to have confessed to taking the jewels. He said that he had taken jewelry to keep his wife in luxury. He said that he intended going to South America, although he had only $500 with him when arrested.

Pick came to New York voluntarily in charge of the detectives, and on his arrival at the Cortlandt St. ferryhouse, of the Pennsylvania Railroad, he was arrested and taken to Police Headquarters. Mrs. Pick accompanied her husband to Headquarters, and bade him an affectionate farewell just before he was locked up.

He was arraigned Monday morning in the Centre Street Police Court, and held by Magistrate Cornell in $3,000 bail for the Grand Jury.

An examination of his books are being made by his former employers, in order to determine the exact amount which Pick has stolen. Mr. Hammel, when seen by a CIRCULAR-WEEKLY reporter Monday stated that he did not know exactly how much the clerk had taken, but that it was in all probability no where near as large as was given in the newspapers. As far as he had been able to determine, he said, the thefts had been going on for three or four years. Pick was not only a stock clerk, but the confidential man of the firm. All the partners thought highly of Pick, and he was considered thoroughly trustworthy and honest. He had been with the firm 17 years, coming with them when he was 13 years old, and having been employed before that time with the old firm of Falkenau, Oppenheimer & Co.

Gorham Mfg. Co. Announces Plan To Pension Employes.

PROVIDENCE, R. I., April 25.—The Gorham Mfg. Co. came to the front again last week with a plan for the pensioning of its employes. The scheme is a most commendable one in every respect and will go into effect May 1. The system is one that will affect about 2,400 employes of the concern, of whom 1,800 are located in this city at the big factory in the Elmwood district. The others are located in New York and through the various sales departments. The company is said to have had the matter under consideration for a year and finally hit upon the plan announced this week. It provides for an annual appropriation determined by the amount paid for labor during the year, and for the payment of an amount to eligible employes based upon their salaries as active employes and their years of service. The circular giving the details of the plan was posted in the company's works and is as follows:

Employes whose records are satisfactory to the company will, if disqualified for work on account of age or permanent ill-health, be eligible to pensions under the following age limits and terms of service: Seventy years of age, 25 years' continuous service; 65 years of age, 35 years of continuous service; 60 years of age, 40 years of continuous service.

When the company shall have been satisfied that an employe is entitled to a pension, they will cause the name of such employe to be placed upon the pension roll, and he will be paid monthly a sum equal to one per cent. for each year's active service, computed at the wage paid at the time of enrollment, provided that no pension shall exceed $1,000 yearly.

A sum will be set aside each equal to one per cent. of the entire amount paid for labor during the preceding year, said amount to be carried to a fund called "pension reserve fund," from which all pensions will be paid.

When the amount paid out for pensions during three consecutive years shall exceed by five per cent. the appropriation under the foregoing provision, all outstanding pensions shall be scaled down to come within the average of the three years' appropriation, and a new schedule adopted for future pensions.

If such reduction of pensions becomes necessary the original rates on outstanding pensions and the original schedule will be resumed whenever the appropriation for three consecutive years shall exceed by five per cent. the amount paid for pensions.

C. H. Harris, Portsmouth, O., is now established in his new quarters, in the Daum building, where he has better facilities for his increasing business.

Buffalo Jewelry Case Co.

MANUFACTURERS OF

JEWELRY & SILVERWARE CASES

PAPER BOXES, TRAYS, CHESTS.

329-335 BROADWAY BUFFALO, N. Y.

Estimates cheerfully furnished. Samples on application

Providence.

J. P. Ford, of Ford & Carpenter, sailed for Europe last week. He will visit the principal European markets.

A new firm that soon will begin the manufacture of jewelry will be known under the firm style of Wheelwright & Lees.

Irons & Russell, owing to increasing business, have taken the space formerly occupied by C. J. Beekman & Co., on the first floor of the building in which the firm is located.

The Union of Jewelry Workers has decided to hold a series of mass meetings prior to June 1, and an endeavor will be made to secure further additions to the list of members.

The property of J. W. Capron & Co. has been attached for $1,000 by Albert Lorsch & Co., in an action for debt. One of the local papers erroneously stated that the attachment had been placed on the property of Albert Lorsch & Co.

There are no marked signs that there will be any "Jewelers' League" to represent the manufacturers on the diamond this season. In some instances this year nines have formed among the shop members, but no steps have been taken to form a league, and the nines play with other independent teams.

James T. Hunt, who was formerly engaged in the jewelry business here, and who is now under two indictments, one charging embezzlement, the other, assault with a dangerous weapon, did not appear in court when his case was called the other day, and was defaulted. He recently asked for a new trial, but this was denied.

The sound of a muffled explosion disturbed the serenity of the officer patrolling in the jewelry district at about 2 A. M. Friday. Visions of robbers looting safes in the heart of the big district came to him at once, and he proceeded to send in a hurry call for help. The patrol wagon, with officers from the Central Station, was soon on the scene, and an investigation was started. A hunt through various buildings failed to bring to light any intruders, or anything that was out of the way or in the least suspicious.

Following the step taken recently by other well known concerns in the trade, the O. C. Devereux Co. has taken out articles of incorporation at the office of the Secretary of State. According to the articles the company is formed for the purpose of engaging in the business of manufacturing, buying, selling and dealing in jewelry and other articles useful and ornamental. The concern will retain its location in this city, and the capital stock is $30,000. The incorporators are Oren C. Devereux, Walter A. Burdick and James Campbell, all of this city. Mr. Burdick is the bookkeeper and Mr. Campbell is foreman of the concern.

The Ostby & Barton Employes' Mutual Relief Association held its fifth annual ball last week. The affair was an unqualified success. Not only was the attendance large, but the hearts of the committee in charge were gladdened by the receipt of a check for $100 to go into the treasury of the organization. This was a slight reminder from the Ostby & Barton Co. that it still had the interest of the employes at heart. Visitors were present from other beneficial

organizations existing among jewelry establishments in the city, and the time until an early hour in the morning was spent in dancing. The Committee of Arrangements included: William P. Tracy, Albert Germershausen, Frank Armstrong, James Campbell, Thomas Norton, Fred Yorkrey and James P. Sullivan. James P. Sullivan, William J. Murphy and William Hargraves were the Reception Committee. Fred Yorkrey was floor director, and his aids were: Thomas Norton, James Campbell, Gustave Grode, Ernest Widergreen, Charles Linstrom, John Johnson, James Bailey, John P. Lenan, Irving Bissell, Antone A. Carlen, Albert Broomstrom. The officers of the association are: President, James P. Sullivan; vice-president, Frank Armstrong; financial secretary, William P. Tracy; recording secretary, James Bailey; treasurer, John P. Lenar.

North Attleboro.

Frank S. Gilbert has returned from a flying visit to New York.

John P. L. Ballou was married on Thursday to Miss Florence Carpenter.

The Bugbee & Niles Co. is remodeling its offices to afford increased facilities.

Rheinhold Selig, an employe of E. Ira Richards & Co. for 30 years, died last week.

Thomas Totten has returned from Porto Rico, where he has been spending the Winter.

John E. Tweedy, of Cheever, Tweedy & Co., is visiting his father, J. A. Tweedy, in Brooklyn.

Charles A. Warren, formerly of the C. A. Warren Co., has associated himself with a jewelry concern in Newark.

Harry Bishop has been installed as foreman for H. F. Barrows & Co. in place of Edward A. Irvine, who resigned.

George K. Webster, of the Webster Co., has presented to the Bank St. school a supply of maples for planting on the school grounds.

Harry E. Hull, of W. H. Bell & Co., has returned from Crescent City, Fla., where he and his wife have been spending a pleasant vacation.

George Day, of Providence, son of C. H. W. Day, of this town, has taken a responsible position with the estate of O. M. Draper, and will take up his residence in town.

The employes of F. H. Cutler & Co., F. S. Gilbert, Sturtevant, Whiting & Bigelow, Riley, French & Heffron, and H. F. Barrows & Co., have formed base ball teams and talk of forming an inter-shop league.

John P. Bonnett has been active in circulating a petition to reward anyone procuring the conviction of any person guilty of illegal sales of liquor. The town is to be dry after May 1, and the jewelers are a unit in favor of a strict enforcement of the law.

The late Owen B. Bestor, of the estate of O. M. Draper, who died on New Year's eve, left his extensive Masonic library to Bristol Lodge F. and A. M. Mr. Bestor was known as one of the best informed men in the State on matters Masonic. His library contained books on this subject dating as far back as 1798, including many copies long out of print.

2½ Tulpstraat, Amsterdam. IMPORTERS 12 Maiden Lane, P. O. Box 1625. NEW YORK.

Attleboro.

Homer M. Daggett, Jr., formerly head of the Daggett Jewelry Co., was married in Rochester, N. Y., yesterday, to Mrs. Eliza Williams Brown.

Frank E. Smith has withdrawn from the firm of Allen, Smith & Thurston, and the remaining members of the house, Walter B. Allen, Elmer Thurston and James McNerney, have incorporated under Rhode Island law as the Allen, Smith & Thurston Co.

Major Everett S. Horton, of the Horton, Angell Co., and Emmons D. Guild, of W. H. Wilmarth & Co., left yesterday for Andersonville, Ga., as members of the official party sent by the State of Rhode Island to dedicate there a monument to the men from that State who died in the prison maintained there by the Confederate States.

James W. Hume, formerly of P. J. Cummings & Co.; James Hume, formerly of the D. F. Briggs Co.; Frank Mossberg, of the Frank Mossberg Co., and Homer M. Daggett, Jr., formerly of the Daggett Jewelry Co., are members of the new United States Auto-Motor Co., which is about to erect a large plant to make gasolene autos in this town.

A part of the jewelry plant of Teed, Crandall & Co. was sold at public auction last week. It was bought by Judge Fred B. Byram, as an agent for an unknown client. Judge Byram stated that it will soon be set in operation again. The sale was due to the forced settlement of a mortgage held by Anthony H. Bliss, of A. H. Bliss & Co., of North Attleboro.

A number of the Attleboro jewelry factories were imminently threatened with fire Friday, when a blaze broke out in the job printing house of the Attleboro Press, in the Robinson building, on Union St. Occupying the same building are the shops of Sykes & Strandberg, the C. H. Eden Co., F. H. Hill & Co., F. W. Weaver & Co., and John M. Fisher & Co., all large manufacturing jewelers. The firemen stopped the flames in the printing house, so that the only ones to suffer above that were the C. H. Eden Co., the fire coming through the floor in one corner, and Sykes & Strandberg, whose quarters were filled with a dense smoke. Otherwise the damage was slight. The cause of the fire is not yet known.

The townspeople suspended business, the factories were closed, and a parade of 2,000 residents, Odd Fellows and Red Men, dedicated Saturday the Solomon Sanatorium, the $400,000 venture of John M. Fisher, of J. M. Fisher & Co. Maxy W. Potter, of J. M. Fisher & Co.; David E. Makepeace, of the D. E. Makepeace Co.; Emmons D. Guild and Edward A. Sweeney, of W. H. Wilmarth & Co.; Charles O. Sweet, of Regnell, Bigney & Co.; William L. King, of E. D. Gilmore & Co.; J. Thomas Inman, of J. T. Inman & Co.; William Spier, of Spier & Coles; Charles M. Robbins, of the Chas. M. Robbins Co., and Charles C. Wilmarth, of Walter E. Hayward & Co., were on the reception committee.

James C. Wright, McRae, Ga., has awarded the contract for the erection of a large building to be used by him as a jewelry establishment.

Boston.

August Loyen, Abington, returned recently from a 10 weeks' trip to Norway and Sweden.

A. G. Farnham, with H. P. Doe & Co., Lawrence, has been in town on his annual buying trip this week.

E. M. Clarke, watchmaker for Gordon & Burgin, 86 Jewelers' building, has severed his connection with that firm.

Henry L. Houghton, Jewelers' building, has been away for a week on a business trip to New York and Philadelphia.

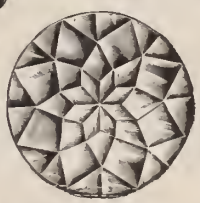
G. J. Crampton, New England representative for Jennings Bros. Mfg. Co., Bridgeport, Conn., was in Boston last week.

W. W. Buxton, formerly a salesman for Daniel Pratt's Son, has secured a position in the clock department of Jordan, Marsh & Co.

J. C. Barlow, of the Montreal office of the American Waltham Watch Co., and R. A. Kettle, of the Chicago office, have been in Boston during the past week.

John H. Baker, salesman for Harris & Lawton, has just returned from a successful business trip through the western part of Massachusetts and Connecticut.

Sven Nelson, who recently sold out his jewelry store in Harvard Square, Cambridge, intends to start shortly on an extended tour of Europe. He will return some time in the Fall and will then open a factory for making scientific instruments and tools.



In spite of the fact that Mayor Collins saw fit to veto the petition of John C. Sawyer for permission to erect a clock sign in front of his new store at 10 Summer St., Mr. Sawyer evidently found a way to obtain such authority, for the clock is there, and surmounted as it is by an electric light display, it adds much to the beauty of the locality.

Buyers in town recently were: Mr. Hewitt, H. S. Hewitt & Co., Brockton; Edward Moulton, Worcester; J. M. Odie, Worcester; L. F. Whitney, Clinton; S. K. Gurney, Gurney Bros. & Co., Brockton; A. G. Farnham, of H. P. Doe & Co., Lawrence;

EICHBERG & CO.,

WADSWORTH Gold Filled Watch Cases

THE WADSWORTH WATCH CASE CO.

Factory and General Offices

DAYTON, KENTUCKY

New York Office
11 John Street

Chicago Office
Columbus Building

G. H. Herrick, Attleboro; Thomas R. Cushing, Rockland; W. A. G. Smith, Rockland; E. A. Hewitt, Bridgewater; Mr. Bruce, Bruce & Chapin, Worcester.

E. J. Gregory, auctioneer, has been selling out the stock of the store under the old Boston Museum, known for years as Remick's. Mr. Remick intends to retire from business, as the building in which he has been located is to be torn down May 1.

The E. Howard Watch Co. has received an order from the L. S. Starrett Co., Athol, for a new watchman clock system for the company's plant. Orders for tower clocks have been placed with the Howard concern by the G. H. Gilbert Mfg. Co., Gilbertville, and the Back Log Club, Littleton, Mass.

Baltimore.

A. Braun will shortly open a new store on Baltimore St., near Gay St.

Talbott W. Jenkins, of Jacobi & Jenkins, has left for a trip with his wife through the south, going as far as New Orleans.

Jacobi & Jenkins have made extensive improvements in the interior of their store. Especial attention has been given to the display windows, on which about $500 have been expended.

The transportation committee of the Merchants and Manufacturers' Association have recommended that the rebate system be continued this Summer, as it has proved very successful in past years. The system is to induce southern and western buyers to come to Baltimore for their stock, and as an inducement those who purchase goods at an aggregate cost of $1,200 have one-half of their round-trip fare reduced.

The directors of the Maryland Glass Co. have decided to wind up the affairs of the company by proceedings in court. It has been arranged to have one of the creditors make application for a receiver. An unsuccessful attempt was made to sell it to New York capitalists for about $75,000. Forty thousand dollars was loaned to the company about a month ago by Bernard M. Baker on a first mortgage, with a view of aiding the company. The company has an authorized capital stock of $150,000.

F. Stein, now in business at Glendive, Mont., has entered into partnership with Mrs. Mary Stein, for the purpose of continuing the business of the late F. W. Stein, Miles City, Mont.

Philadelphia.

John Demmert, opened his new store, 504 Federal St., Camden, Saturday.

James Bathgate was in New York last week visiting the trade on business solely.

Otto Moock, manufacturing jeweler, 809 Sansom St., is reported to be critically ill.

J. J. Zimmern, with M. Sickles & Sons, left Monday for a trip through neighboring States.

C. G. Markley, watchmaker, has accepted a position with J. B. Bechtel & Co., 725 Sansom St.

T. Taylor Shannon, 3853 Lancaster Ave., is seriously ill with pneumonia, but has passed the crisis.

Edmund Diesinger, casemaker, has renovated his establishment at the northeast corner of 7th and Sansom Sts.

Reed & Barton have the contract to supply an $8,500 silver service for the new Hamilton Court apartments.

Wm. R. Dougherty, builder, this city, is figuring on plans for an addition to the Standard Watch Co.'s plant.

W. Hopkins Izard, 929 Chestnut St., supplied a handsome loving cup which was last week presented to an official of the Fourth St. National Bank.

Judgment was entered in the local courts last week by Gustav A. Bisler against 10 Philadelphia jewelry manufacturing companies for $169.45 for want of an affidavit of defense.

It is reported in the local trade that Harry Stevens, of New York, buyer of Stern Bros., jewelry department, is to succeed James Bathgate as manager of Strawbridge & Clothier's jewelry store.

The Wm. L. Gilbert Clock Co. entered suit in Common Pleas Court, No. III, last week, against the Market Street Novelty House, to recover on a contract. The clock company is represented by G. W. Carr.

Wm. Scherr, aged 25 years, a watchmaker, employed with A. Bonsal, 2d and Spruce Sts., died last week after a lingering illness at his home, 2d and Brown Sts. He was a nephew of George Scherr, a one time prominent jobber.

Charged with stealing jewelry from the stores of E. J. Hertz, 13th and Chestnut Sts., and M. F. Hamilton & Son, 112 S. 13th Sts., Georgiana Miller, a scrub woman, formerly employed by the jewelers, was arrested and held for trial last week. It was asserted that the woman hid the stolen

REMOVAL NOTICE

WE ARE NOW LOCATED AT

NOS. 2 AND 4 MAIDEN LANE,

In the Broadway-Maiden Lane Building,
Third Floor, Rooms 311-317,

WHERE WE WILL BE PLEASED TO SEE OUR FRIENDS.

ADOLPHE SCHWOB,

Importer and Jobber in Watches. NEW YORK CITY.

jewelry in her bucket, and had systematically robbed the stores. The total loss of the firms is not yet known.

Wm. G. Earle and W. J. Bruehl were guests at the banquet Thursday, of the Fellowship Club.

J. E. Caldwell & Co. made the prize cups for award at the golf tournament of the Atlantic City Country Club.

W. R. Bush, watchmaker, has resigned his position with Gimbel Bros. and returned to Wanamaker's.

Mr. Browne, buyer of the jewelry department of N. Snellenberg & Co.'s store, has resigned his position.

Charles C. Lockhart, a well known material salesman, is again making his headquarters at 735 Sansom St.

Notices of the annual shad dinner of the Philadelphia Jewelers' Club, to be held next Monday, have been sent out this week.

W. J. Allrich, late of the jewelry department of Strawbridge & Clothier, has accepted a position with N. Snellenberg & Co.

J. E. Caldwell & Co., advertise a liberal reward for the return of a long lace brooch sapphire, set in diamonds, and lost last week.

Edward Weeder, watchmaker for George Grau, 722 Chestnut St., is at his home in Pennsberg, Pa., convalescing from typhoid fever.

J. B. Dickinson and Charles E. Hurlburt, of the Elgin National Watch Co., passed through Philadelphia last week on their way south.

W. M. Engle is making extensive alterations to his store at 4233 Lancaster Ave., intending to remodel the entire building and make it one of the most attractive shops in West Philadelphia.

James Orr, 11 S. 9th St., has acquired two splendid specimens of old English cut glass decanters which have been in one family 135 years.

J. Neill, jobber, 727 Sansom St., officiated at the public presentation of a championship pennant to the Camden Basketball team last week.

Andrew Little has resigned his position with J. B. Bechtel & Co., to accept a place with W. O. Pierce, the Indian watchmaker, at 13th and Pine Sts.

Wm. C. Williams, with Chas. H. O'Bryon, spent part of the week at Avalon, N. J., where he has purchased a lot and where he contemplates building a cottage.

Judgment was entered in this city, last week, against Edward M. Riley and Wm. G. Earle for $1,000 on a bond by the New Southwark Building Association.

The contract for the prize cups, watches, medals and other trophies awarded at the annual University relay races, Saturday, was given to Wm. P. Sackett, of Wanamaker's.

J. Warner Hutchins had as his guests at the Ours Club, Atlantic City, over Sunday, a number of jewelers from the city and State, the occasion being the anniversary of his birth. There were about 25 guests, and talent was taken down to assist in their entertainment.

Among the rural retailers in town buying last week were: F. M. Lewis, Bridgeton, N. J.; Joseph M. Lewis, Lambertville, N. J.; C. A. Sterner, Allentown; C. Ross Boas, Harrisburg; E. C. Albertson, Bridgeton, N. J.; R. Russell Blair, Bellefonte, Pa.; J. W. Parrish, Newark, Del.; Wm. Beck, Vineland, N. J.; R. W. Quicksall, Mt. Holly, N. J., and H. P. Black, Sykesville, N. J.

Syracuse.

M. L. Mantell is issuing a fine catalogue.

E. G. Saunders has succeeded W. E. Clark as bookkeeper for H. J. Howe.

Michael Lemp, of 113 N. Salina St., recently installed an optical department in his store.

H. N. Edwards has closed his store at 440 S. Salina St. and retired from the jewelry business.

H. J. Howe has given a fine electric clock to be placed in the new Carnegie Library in Canastota.

Blumberg Bros. & Co., 224 E. Washington St., are advertising a reduction sale preparatory to their removal to 440 S. Salina St.

The Fred F. Meade Co. is fitting up a handsome jewelry store in the Larned Block at Washington and Warren Sts., and will open up for business in the near future.

The Lyons Cut Glass Co. has commenced operations on a small scale. Preparatory work is going on so that the factory can start about May 1 with a full force of hands.

J. William Brown, Ortonville, Minn., has moved his building to a new location, in order to permit the erection of a new structure.

To Importers and Large Dealers in Diamonds.

We are now operating, and have been for the past ten years, the most extensive and best equipped Diamond Cutting Works in this country, equaling any in Europe.

We are continually buying large series of Rough direct from the Syndicate controlling the output of the associated Diamond mine owners, and can offer to Importers and Large Dealers, Original Lots at prices equal to those of the European Markets, thereby saving the 10 per cent. import duty.

We do NOT solicit memorandum orders.

Meeting of the Creditors of the Spencer Optical Mfg. Co.

A meeting of the creditors of the Spencer Optical Mfg. Co. of New York was held Monday in the office of Morris S. Wise, Referee in Bankruptcy, 40 Exchange Place. Twenty-eight claims aggregating $6,100 were proved. The majority of the indebtedness appeared to be represented by the Jewelers Association and Board of Trade of New York. Hiram A. Bliss, the temporary receiver of the company, was elected trustee and his bond fixed at $55,000, which is $5,000 more than his receivership bond. He was authorized to continue the business, using his own discretion as to details.

After the election of the trustee, Geo. Carlton Comstock, attorney for John and James Spencer, took occasion to censure the Jewelers Association and Board of Trade for filing a petition against the New Jersey corporation. Mr. Comstock said that the filing of the petition might block the sale of the lens factory, for which a deal was pending. Mr. Comstock said that this lens factory disposed of by the assignee would bring about $9,000, that this was $2,000 more than its appraised value, and was probably $8,000 more than the machinery in the factory would bring as old junk. He said that it had been his intention to pool the assets of the New York and New Jersey concerns, and that if this was done the creditors of both companies could undoubtedly obtain 100 cents on the dollar. Because of the filing of the petition, he said, he did not know now whether or not such a thing could be done.

Albert H. Gleason, of Hastings & Gleason, attorney for the Jewelers Association and Board of Trade of New York, in replying to Mr. Comstock, stated that the petition against the New Jersey firm had been filed for the purpose of protecting the New Jersey creditors. He said that the Chatham National Bank, having a heavy chattel and real estate mortgage against the property, could, under the assignment law, sacrifice the plant to the great loss of the creditors at any time it chose, by foreclosing these mortgages. Mr. Gleason declared that filing a bankruptcy petition was the only safe and methodical way of settling the concern's business.

It developed during the meeting that the liabilities of the New York concern amounted to $83,647 and the nominal assets to $54,327.

The next meeting of the creditors will be held in the same place, Monday, May 11, at 2 P. M.

New Stores and Enterprises.

(New Optical concerns will be found in the Optical Department and new enterprises in New York will be found under heading "New York Notes.")

E. E. Allen is a new jeweler in Wilton, N. D.

A new retail store will shortly be opened in Dundas, Minn., by Geo. Sears.

W. H. Durham has just established himself in business in North Yakima, Wash.

Benyas & Co. last week opened their new jewelry establishment in Marquette, Mich.

Negotiations are pending for the establishment of a retail business in Croton, N. Y.

C. J. W. Parker, formerly watch inspector for the Santa Fé Railroad, has opened a new store in Colusa, Cal.

C. M. Maxon, formerly of New York, has leased quarters in Webster City, Ia., where he will conduct a jewelry and piano business.

August Baumann, of the Grand Island, Neb., Post Office Department, intends to resign his position to engage in the jewelry business in Iowa.

Charles Peck, formerly with the jewelry department of the Glass Block, Minneapolis, Minn., has opened a repair store at 507 4th St., S., in that city.

L. E. Willis and Geo. W. Marvin, Saint Albans, Vt., have secured the lease of exceptionally fine quarters in which they will open a first-class store.

The Burlington Drug and Jewelry Co. was incorporated in Burlington, Col., last week, with a capital stock of $2,000. The incorporators are Chas. Creglaw, Minnie E. Creglaw and Anna F. Dunn.

R. M. Hughes and Hugh Cameron have formed a partnership and opened a retail store at 137 N. Main St., Lima, O. Mr. Hughes had previously been in the employ of Adolph Fox, Lima, for a period of 18 years.

Death of Charles Babcock.

SALT LAKE CITY, Utah, April 22.—Charles Babcock, a watchmaker who, 50 years ago, passed through his apprenticeship at Troy, N. Y., with Boyd Park, of this city, died of heart disease at 11 o'clock last Saturday morning, in the store of his old friend, where he had been employed for 14 years.

Only a week ago he returned from Troy, where he had gone last December to bury his wife. Before his departure his heart had been troubling him and, by the advice of physicians, he had remained in Troy until the longing for the west overcame him and he insisted on returning to Salt Lake. Mr. Babcock had just entered the store from his visit to Dr. Burrows when he reeled and fell dead.

The deceased was 72 years old, and is survived by three sons and one daughter, all of whom live at Troy. He was a member of Apollo Commandery, No. 15, Knights Templar. No arrangements will be made for the funeral until his relatives in the east are heard from.

A. J. Catchadal, Hebron, Neb., has sold out.

Another Fight Necessary.

THE failure of the Bostwick Gold Stamping bill to become a law of New York will, no doubt, prove a severe disappointment to the great majority of retail and manufacturing jewelers of this State who believe the measure to be a thoroughly just one and an act that has been needed for many years. There is some consolation, however, in the fact that the bill was not defeated, but was lost simply through its failure to be brought to a vote before the adjournment of the Senate, owing to the great pressure of business in the closing hours of the session.

Had the bill come up for consideration, there is practically little doubt that it would have become a law, as nearly all the opposition to the measure manifested when it was first introduced had died down, and no member of the Legislature avowed himself as opposed to the measure, while a large number declared themselves emphatically in favor of such an act. It is, therefore, to be hoped that the merchants who made such a strenuous fight in favor of the act, will not let their failure to have it placed among the laws of the State, keep them from introducing the bill at the next session of the New York Legislature.

Should it be introduced again, it should be done early in the session, as it was simply lack of time that was responsible for its failure to become a law this session. The bill was not introduced into the Assembly until March 25, but it rapidly passed through the committee stages, and received the favorable action of that body. It then went to the Senate, and was reported favorably by the Senate Committee on Codes. Under ordinary circumstances, even at that late date, it would have passed the upper house but for the unfortunate disagreement between the Senate and Assembly and the action of the independent Senators in forcing an adjournment during the busiest time of that body. When the Senate finally did meet, it had barely time to act on the measures of greatest moment, and was unable to consider the Bostwick bill, among a host of others of lesser importance.

One thing that was made clear by the introduction of the bill was that the sentiment in favor of it throughout the entire State is strong, as it came not only from the jewelry trade, but was also manifested by the press and public at large.

An Important Victory.

THE result of the trial in the suit brought by the United States Government, to forfeit the $27,000 worth of diamonds which had been seized from a smuggler, should be a subject of congratulation, not only to the United States District Attorney and his assistant, but to the jewelry trade as well, as this verdict in favor of the Government, it is generally believed, will do more to put a stop to the nefarious operations of the small coterie of Antwerp smugglers than did even the conviction of the man who brought in the goods. While the first interests of honest merchants, in cases of this kind, are always in the conviction of the smuggler, the effect produced by the conviction in this case would have been modified, had not the Government also been successful in confiscating the goods.

While it is unfortunate for the Antwerp merchant who claims that the goods were his property and were obtained from him by fraud, that he should lose the diamonds through the actions of other parties, nevertheless, had he been successful in his attempt to have the goods turned over to him, the smuggling fraternity would have seen in the precedent thus established, a way by which they might circumvent the law in the future, even when their agent was detected and convicted; for they could have arranged beforehand all the details so that one of their number might make a claim for the goods, similar to that set up by the claimant in this case.

If the testimony of the claimant be true, there is no doubt that he has suffered a great hardship, but this is a case where the law has sacrificed the interests of an individual to the benefit of a large business community, and the decision cannot, therefore, fail to be gratifying to the entire jewelry trade.

Dissolution of Firm Organized Nearly Half a Century Ago.

LOUISVILLE, Ky., April 22.—It was announced Saturday that the firm of Geo. Wolf & Co., one of the oldest jewelry houses in the city, was to go out of business. The firm, which was organized by Wolf & Durrenger in 1856, has been located at Fourth Ave. and Jefferson St. since 1876.

Mr. Durrenger retired in 1871 and the business was carried on by George Wolf until his death in 1897. Since that time Mrs. Wolf has conducted the business. Owing to her advanced age she has decided to close up the affairs of the firm.

Martin T. Hagerty, Phillipsburg, N. J., was recently defrauded out of two rings, valued at $75 and $80 respectively. The swindler gave his name at the time as Wm. H. Moyer.

Polishing Law Passed.

Brackett Bill Now Before Governor, and Gold Pen Manufacturers to Fight It.

ALBANY, N. Y., April 27.—Senator Brackett's bill, which makes it a misdemeanor to employ females at all, or males under 18 years of age, in polishing and buffing shops where tripoli, rouge and other abrasives are used, except in jewelry and silverware factories, passed the Assembly Thursday, having passed the Senate April 17, and is now before the Governor for his signature.

This bill, which was originally drafted to cover every manufacturing plant where tripoli, rouge and other abrasives are used, was amended early in April by a committee representing the Manufacturing Jewelers' Association, of New York, who went to Albany to fight it. This amendment, however, does not exempt the gold pen manufacturers, who use iridium, and its passage, therefore, in its amended state, has caused no little stir among that class of manufacturers.

Some attempt to kill the bill or further amend it so that it would not affect the gold pen industry, was made in the Assembly last week, but with little result.

A strenuous effort is now being made to obtain a hearing on the bill before Governor Odell, who has been requested to withhold his signature until this hearing can take place. If he grants the request of the gold pen manufacturers for a hearing, a committee will go to Albany and set forth their position to the Governor. If, in spite of their efforts, the Governor should sign the bill, and its provisions are enforced, the pen manufacturers will attempt to prove that the bill is unconstitutional. Failing in this, it is not unlikely that some of the manufacturers will be obliged to move their plants into New Jersey or some other nearby State which does not have such a law.

Governor of Arkansas Vetoes Amendment To Myers Pearl Bill.

LITTLE ROCK, Ark., April 24.—The amendment to the Myers Mussel Law, which, if passed, would have allowed the use of "crow feet" in water over seven feet in depth, and the use of dredges in lakes and bayous, was vetoed by the Governor yesterday, and an effort to pass the measure over his veto was lost in the Legislature by a few votes.

As told in THE CIRCULAR-WEEKLY last week, the amendment was introduced by Mr. Myers himself, after a protest had been made against his original bill to protect the pearl fisheries of the State. The first bill established a "closed season" during the months of April, May and June, while the amendment would have changed the season to January, February and March.

The veto of this bill by the Governor is looked upon as a hard blow to the button and pearl interests of the State, as well as to many laboring people engaged in hunting for pearls and mussels.

Burglars last week gained an entrance to the store of C. L. Adamson, Augusta, Ark., by boring through a rear door. While ransacking the premises they were heard by a clerk, who slept upstairs, and who frightened them away. They escaped with about $20 worth of jewelry.

Last Week's New York Arrivals.

THE CIRCULAR-WEEKLY each day posts in its office a bulletin of the latest buyers visiting New York, which every member of the trade is ordially invited to copy.

For the sum of $10, (payable in advance, a daily list will be mailed or delivered, during the Spring season (ending July 1, 1903, to the offices of those desiring this service.

Involuntary Petition in Bankruptcy Filed Against the Philadelphia Jewelry Mfg. Co.

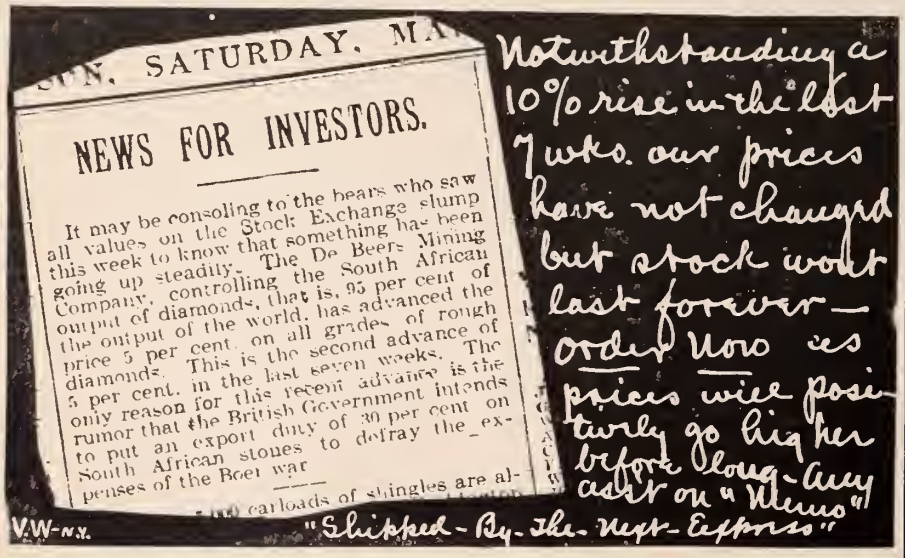
PHILADELPHIA, Pa., April 24.—An involuntary petition in bankruptcy has been filed against the Philadelphia Jewelry Mfg. Co., 26th and Market Sts., this city, by creditors of the concern. The defendant in the proceeding is a corporation organized under the New Jersey laws, and the officers are: J. G. Rosengarten, president, and Wm. D. H. Wilson, secretary and treasurer.

The business was started a number of years ago by J. G. Rosengarten and Elmer E. Pfersich, under the style of J. G. Rosengarten & Co. The firm was unsuccessful, and the business was subsequently carried on by Mary Rosengarten, and later under a limited co-partnership. The house made an assignment in 1899, after which the business was reorganized and incorporated with the present officers. The company has a capital of $35,000, of which $20,000 is common stock and $15,000 preferred. The principal line manufactured by the concern has been cheap jewelry, and ornaments for government uniforms.

Dismissal of Attorney General's Appeal Against Devore Diamond Co.'s Manager.

DETROIT, Mich., April 25.—The Supreme Court yesterday dismissed the appeal in the case of the Attorney General against Frank W. Parsons, of Detroit, manager of the Devore Diamond Co. The State tried to restrain the defendant from doing business. The local Circuit Court denied the petition for an injunction on the ground that it was not the proper remedy, and the Attorney General appealed.

The question of the right to use an injunction in such cases was a close one, and the Attorney General hoped to secure a decision favorable to this method of procedure. The case will have to be tried again at Detroit on demurrer. The Attorney General claims the contract of the Devore Diamond Co. will not finance out; that it depends for its fulfillment on lapses and increased business, and that it is a gambling contract against public policy.



The company, it is alleged, proposed to give a diamond worth $200 to those who mature contracts by paying in about $80 in monthly instalments.

Importations at the Port of New York.

Alfred Reinhorn, Winona, Minn., will admit G. F. Meier, Minneapolis, to partnership. Mr. Meier expects to take a post-graduate course in optics in New York during the Summer, and will enter into active partnership about Sept. 1.

Buy "Diamonds" Now!

CROSS & BEGUELIN

Importers and Cutters of Diamonds and Precious Stones

8 Rue de Mesley, PARIS *Telephone, 2188 Cortlandt* *17 Maiden Lane, NEW YORK*

New York Notes.

N. Aaron has opened a store at 293 Eighth Ave.

M. Abramowitz, 2017 Third Ave., is having his premises renovated.

I. Boorer has removed from 354 Columbus Ave. to 2366 Eighth Ave.

N. Goodman has removed from 294 Rivington St. to 1405 Third Ave.

John E. Lomberg, 1442 Third Ave., will remove May 1 to the double store 1534 Third Ave.

Harris & Schuster have removed from the ninth to the 12th floor of the Jewelers' building, at 9 Maiden Lane.

Berkman & Herbert is the title of a new concern at 166 E. 106th St. The firm makes gold jewelry and diamond mountings and does watch and jewelry repairing, stone setting and engraving and coloring for the trade.

F. Drissler, the first president of the International Jewelry Workers' Union, and Charles Beisele, for four years treasurer of the union, have gone into business for themselves at 76 Nassau St., under the style of Beisele & Drissler.

Maurice J. Nolan has bought out the manufacturing jewelry business of Geo. J. Miller, 45 Maiden Lane, and with Chas. G. Buchner, general engraver and designer, under the name of Buchner & Nolan, will manufacture badges, medals, etc., do repairing for the trade and engrave crests, initials and inscriptions on watches and silverware.

David Edward, of Edward & Sons, Glasgow, Scotland, one of the largest jewelry and silverware jobbing houses in that country, has been in the United States for the past two weeks on his way to Mexico and the Pacific Coast, on a pleasure trip. Mr. Edward is reported to have purchased over $10,000 worth of high class art silver to be shipped to Scotland.

E. C. Heathcote, who, until Dec. 1 of last year was the New York representative of the Attleboro Mfg. Co., has gone into business for himself at 7 Maiden Lane. He will import diamonds and precious stones. Prior to becoming the New York manager for the Attleboro firm, he was in the precious stone business in the employ of his father, Wm. H. Heathcote.

W. F. Chambers, who is well known to the trade in New York and vicinity, having for a number of years had charge of the New York office of the Daggett & Clapp Co., manufacturing jewelers, of Providence, R. I., is now located at 180 Broadway, and is in charge of the New York office of P. & A. Linton, manufacturing jewelers, of Providence. Mr. Chambers succeeds E. H. Fordham, who died a short time ago.

Regarding the newspaper reports from Oregon, that valuable jade discoveries have recently been made in that State, Geo. F. Kunz, gem expert for Tiffany & Co., was seen Saturday by a CIRCULAR-WEEKLY reporter. Mr. Kunz said that he had examined samples of the alleged jade, and said that the material was not jade, but some other cheaper substance, which any inexperienced person might take for that kind of stone.

David Kaiser & Co. will move to-morrow to the Anderson building, 12 John St., New York, from 35 Ann St., where they have been located for 20 years. The firm was founded in 1883 under the style of A. Luthy & Co., who were succeeded in 1889 by Lewis, Kaiser & Luthy, who in turn were succeeded in 1896 by David Kaiser & Co. The present members of the firm are David Kaiser and Fred L. Smith, who have been connected with the trade for 37 years and 30 years respectively. The firm, which manufactures fine diamond mountings, has long been noted for the originality of design and the superior workmanship of its products.

The schedules of Petit & Carson, retail jewelers, of New Rochelle, N. Y., against whom an involuntary petition in bankruptcy was filed August 20, 1902, were filed Wednesday in the United States District Court, at New York. Among the creditors for $100 or more are: Harrison Bros., $3,000; Arnstein Bros. & Co., $1,250; the Gorham Mfg. Co., $598; A. Wittnauer, $567; J. B. Bowden & Co., $174; Eastman Kodak Co., $142, and the Van Bergh Silver Plate Co., $131. The liabilities are estimated at $11,897, and the assets at $74. John S. H. Petit has individual debts of $1,958, and assets of $700 in accounts. His stock of

Fine Glassware for the Table.

Plain, Engraved, Etched, Cut, and Rock Crystal Decorations.

C. DORFLINGER & SONS, 36 Murray Street, New York.

Announcement is hereby made of our removal from 64 John Street to larger quarters at

87 Maiden Lane.

A cordial invitation is extended to the trade to visit us at our new location.

Silbermann & Co.,

PH. SILBERMANN.
MAURICE KOHN.
MILTON H. WALLENSTEIN.

MANUFACTURING JEWELERS,
Office and Factory, 87 Maiden Lane,
New York.

WE RETAIN OUR OLD TELEPHONE NUMBER, 2021 JOHN.

$4,500 was sold out by the Sheriff in June, 1902.

Louis Halpert has removed from 41 to 57 Maiden Lane.

H. Herbert has sold out his store at 2179 Eighth Ave. to D. Davis, 779 Sixth Ave.

N. Glauber, importer of diamonds, pearls and colored stones, 25 Maiden Lane, has removed to 14 Maiden Lane.

The new, large vault of the Maiden Lane Safe Deposit Co., 170 Broadway, is now completed and ready for use.

The American Watch Case Co. has removed from the 10th to the 11th floor of the Jewelers' building, at 9 Maiden Lane.

The New York office of Bennett & Bradford, manufacturing jewelers, Providence, R. I., will, after May 1, be at 7 Maiden Lane, instead of 3 Maiden Lane.

J. O. Jacot, manager for Emile Jacot, retail jeweler, of Quebec, was in New York last week, on his way to Switzerland. This is the first time Mr. Jacot has been abroad since 1866. He left on the *Cedric*.

Mr. Dreihlato, buyer for Stern, Wolikowisky, Mann & Co., dealers in jewelry and diamonds, left for Europe Saturday on the *Zeeland*, to be gone several months. Mr. Dreihlato will visit the diamond markets.

A judgment of $487.18 against the Montana Diamond Co. of America in favor of Julius Wodiska was filed Wednesday. The judgment is the outgrowth of the suit reported in the last issue of THE CIRCULAR-WEEKLY.

J. Hochhaus & Son, importers and cutters of diamonds, 51 Maiden Lane, have leased offices on the ninth floor of the Prescott building, 65 Nassau St., where they will have larger and finer quarters and will be better able to conduct their increasing business.

The appeal from an order overruling the demurrers to the complaint of Asher Green in his suit for slander against Andrew Davies and others, was argued Thursday in the Appellate Division of the Supreme Court. Judgment was reserved.

R. J. Finke, formerly of Wolf & Finke, 61st St. and Columbus Ave., has opened a jewelry store at 1678 Amsterdam Ave., near 143d St. Mr. Finke was associated with Mr. Wolf for 27 years, 21 years as workman and six years as partner.

The New York office of W. G. Clark & Co., manufacturing jewelers, North Attleboro, Mass., has been removed from 3 Maiden Lane to 7 Maiden Lane, where it will be in the office formerly occupied by Chas. L. Trout & Co., who moved about two weeks ago to 15 Maiden Lane.

F. Myzel, 1929½ Broadway, will remove some time in May to his new premises in the Arcade building, between 65th and 66th Sts., on Broadway. Mr. Myzel has heretofore enjoyed the distinction of possessing the smallest jewelry store in New York, his present premises occupying the space of 4x10 feet.

Wm. Thompson, of the Anglo-American Plate Co., London, Eng., is in New York in the interest of his firm, which is handling silver goods, having connections for the disposal of these lines abroad. The concern comes in contact with the best trade in England, France, Germany, Holland, Belgium, Russia, India and Australia, and is prepared to take commissions for American manufactures and to supply designs for French, Spanish, Dutch or Austrian novelties in jewelry or silverware.

One of the oddest jewelry signs in New York hangs above the entrance to the store of B. U. Jackle, 866 Third Ave. The sign is in the shape of a large pair of spectacles lighted inside at night by electricity. The electric current is intermittent, so that the effect is that of the spectacles blinking. The sign was designed and conceived by Oscar C. Jackle, who has charge of the optical department of the store.

Louis Gotthold, manufacturing jeweler at 2345 Eighth Ave., now conducts a retail department in connection with his business.

St. John Wood, of J. R. Wood & Sons, manufacturers of rings and importers of diamonds, 170 Broadway, was the subject of considerable unpleasant notoriety in the newspapers last week. Wednesday the papers stated that Mr. Wood, who owns an automobile, had run over Michael Hurley, of Yonkers, breaking two of his ribs. Mr. Hurley was seriously injured, and an examination into the causes of the accident will be held in Mount Vernon in a few days. Mr. Wood believes that he is in a position to exonerate himself from responsibility in the affair. The newspapers also stated Saturday morning that Magistrate Mayo, in the Centre Street Court, had issued a summons for the appearance of Mr. Wood May 11, to explain why he should not be prosecuted for the careless act of his chauffeur in running down one horse of the coach "Pioneer" in Central Park. According to the information laid before the Magistrate, the accident occurred March 27. Alfred G. Vanderbilt, Reginald W. Rives and Charles H. Wilson were in the coach exercising the horses, when Mr. Wood's chauffeur, who was the sole occupant of the car, ran into the off leader of the coach. Mr. Vanderbilt claims that the horse was left in such a condition as to be absolutely useless for coaching, and had to be sold for a price that was nothing compared to its former value. Mr. Wood stated to a CIRCULAR-WEEKLY reporter Monday that he had not been served with a summons to appear in the case, and that in his opinion the horse claimed to be so severely injured was only slightly grazed by his auto.

Mary Goldman, 5 E. 118th St., formerly a manufacturing jeweler, who filed a petition in bankruptcy in the United States District Court, of New York, Feb. 2, with schedules showing liabilities of $15,739 and nominal assets of $1,500, was discharged

of her debts Monday by the United States District Court.

Camerden & Forster, jewelers and importers of art products, now at 273 Fifth Ave., will remove about May 10 to 450 Fifth Ave.

The suit brought by Alexander W. Lodomez, against Max Nathan, diamond dealer, at 45 Maiden Lane, for $25,000 for alleged alienation of the affections of Mrs. Lodomez, who is now Mrs. Nathan, resulted last week in a verdict in favor of Mr. Nathan.

Tiffany & Co. are offering a reward of $5,000 for the return of a necklace containing 57 pearls. The concern began by offering a $1,000 reward, but as this brought no returns, the amount was raised to $5,000. The necklace belongs to a customer, and was lost on the afternoon of April 2, in the vicinity of Madison Ave., Park Ave. and 35th St. The sum offered is said to be much larger than a pawnbroker would pay for the necklace.

John R. Kennedy, Pittsburgh Clockmaker, Shot in Cleveland, O.

CLEVELAND, O., April 22.—John R. Kennedy, a clockmaker, was shot last Monday noon at the home of Herbert S. Reed, 180 Summit St., and Mrs. Reed charges her husband with having committed the deed. The bullet entered the body just above the heart, and the man is in a very dangerous condition.

Kennedy's home is in Pittsburgh, but he had been working in Cleveland for some time, making his home at the Imperial Hotel. About two weeks before the tragedy, he went to board with the Reeds, and it was said they were friends until the time of the shooting.

F. Post & Son, Biloxi, Miss., are making extensive improvements in the exterior of their store.

Complimentary Dinner Given To Superintendent August Beucke.

NEWARK, N. J., April 27.—A complimentary dinner was given, Saturday night, in Achtel-Stetter's banquet hall, to August Beucke, superintendent of the Crescent Watch Case Co., of Newark, by the foremen of the different departments of the factory, the occasion being a farewell reception to Mr. Beucke, who will sail to Europe Tuesday on the *Kaiser Wilhelm II.* for a three or four months' visit at his old home, in France. During his trip abroad Mr. Beucke will also visit Germany and Switzerland.

Mr. Beucke came to this country from Switzerland 32 years ago, and for a quarter of a century he has been an employe of the Crescent Watch Case Co., and for several years superintendent of the factory. During the 32 years he had never returned to his native land, and the present visit is his first.

There were 25 at the dinner, only two of whom were guests, the others being department foremen. Assistant Superintendent Arthur Cobb was the toastmaster of the evening, and performed his duties creditably. The menu was particularly fine, and was supplemented by a variety of fine punches and cigars.

Among those present were: A. Beucke, Arthur Cobb, Frank McDermitt, Charles Nobs, Jr.; Charles F. Brinck, Jay Wood, H. A. Flinn, F. Farrel, Charles Chabot, Fritz Lesquereux, V. Pretot, F. Fenwick, G. Dexter, R. O. Crommelin, Allen Feeks, L. J. Faure, C. L. Ramsdell, Wm. Dwyer, Ed. Pretot, Albert Markel, Fritz Hinni, John Geiger, Wm. Kleh, P. A. Flaumont, George Buguelin.

Ernest Black, Greenville, S. C., has purchased the stock of W. M. Miller, Greer Depot, and will continue the business at that place.

Newark.

Benjamin Mayo, who for many years was in the jewelry business at 887 Broad St., will resume the diamond and jewelry business about May 1, occupying one of the offices in the Kinney building, 792 Broad St.

The name of the Keller & Henerlau Co. has been changed to the O. L. Henerlau Co., and it is now at 251 New Jersey Railroad Ave. The Chicago office of the company has been established in the Columbus building, room 306, and will be in charge of G. T. Bynner, who will look after the Chicago and western jobbing trade.

Harry Nelson was locked up at Police Headquarters Wednesday on suspicion of having stolen a number of opera glasses from the jewelry store of Charles Hartdegen & Co., 677 Broad St., during the temporary absence of the clerk in the opera glass department. The alarm bell, indicating that the show case was being tampered with, began to clang, and on investigation Nelson, it is said, was found walking from behind the counter. He was taken into custody, but refused to tell the police anything about himself. When brought to court he was discharged for lack of evidence.

Jewelers' Gold Bars Withdrawn and Exchanged at New York.

Week Ended April 25, 1903.

The U. S. Assay Office reports:

Gold bars exchanged for gold coin	$250,232.61
Gold bars paid depositors	38,992.15
Total	$289,224.76

Of this the gold bars exchanged for gold coin are reported by the Sub-Treasury as follows:

April 20	$57,238.61
" 21	46,499.43
" 22	30,749.02
" 23	41,907.79
" 24	58,477.95
" 25	15,359.81
Total	$250,232.61

BROADWAY, CORNER OF DEY STREET, NEW YORK.

News Gleanings.

John Reese, Newton, Kan., has given a warranty deed for $200.

New quarters are being fitted up for the stock of R. S. Thornton, Cozad, Neb.

August Princen, Minneota, Minn., has received a patent on an automatic blowpipe.

M. O. Stanley has purchased the business of Edward S. Gregory & Co., Gallatin, Mo.

A. B. Cohen, Scranton, Pa., has moved his stock into new quarters at 424 Spruce St.

A. J. Johnson, Ada, Minn., has engaged the services of Lewis Lee as working jeweler.

C. A. Cantwell, Malone, N. Y., has announced his intention of retiring from business.

Preston Cooley, Van Alstyne, Tex., has given a chattel mortgage for $300 on his tools.

H. N. Holderness has removed his stock of jewelry from Stephenville, Tex., to Abilene, Tex.

Fayette Kerr, Murphysboro, Ill., has opened a branch store and watch repair shop at Thebes.

J. W. Smith's establishment, Hornellsville, N. Y., was slightly damaged by fire last Wednesday.

Edwin H. Brandes has been admitted into the firm of the Paegel Jewelry Mfg. Co., Minneapolis, Minn.

W. F. Baier, who recently sold his jewelry store at Jordan, Minn., will go north for the benefit of his health.

W. H. Haupt, formerly of Haupt Bros., Peabody, Kan., is going to start a business at Bartlesville, Ind. T.

S. M. Smith, Woodstown, N. J., will shortly take up his abode in Camden, where he will continue business.

S. Isador Sulzbacher, of Isaac Sulzbacher & Son, Florence, S. C., has set out on a purchasing trip to New York.

B. M. Howell, Louisville, Ill., has moved his stock of jewelry into more commodious quarters in the I. O. O. F. building.

The first store in Augusta, Me., to display the union card of the Jewelry Clerks' Union is the establishment of Guy O. Vickery.

Wilson Hanes, a jeweler of Clayville, N. Y., was a prize winner last week in a fishing contest held at Sauquoit Creek.

E. Israel, Harrison, O., has refitted the interior of his establishment and considerably improved his optical department.

Albert E. Prescott, North Creek, N. Y., is now located in the quarters formerly occupied by the postoffice of that place.

Bailey & Plumb, Ogdensburg, N. Y., have dissolved partnership, Mr. Plumb continuing the business at the old stand.

S. W. Wadsworth, formerly engaged in business in Plymouth, Neb., has left for California, where he will remain permanently.

Harper Hospital authorities last Saturday awarded the contract for furnishing handsome gold medals for the nurse graduates to Roehm & Son, Detroit, Mich.

A fire in Riley, Kan., recently destroyed about half a block of buildings, and W. W. Dingman lost his stock of jewelry, which was stored in the Worboy building.

Dennis Schram, who recently purchased the stock of F. H. Stebbins, Jacksonville, Ill., has made extensive improvements in the establishment. The interior has been renovated and an entirely new stock installed.

Col. Watson J. Miller, of the International Silver Co.'s Shelton factory, left last Sunday in company with Governor Chamberlain for a short visit to St. Louis, Mo.

J. Allan Kirk, said to be a watch expert from two large factories, has been inspecting and repairing watches recently in Rochester, Pa., and vicinity.

Thieves last week entered the jewelry and dry goods establishment of Mrs. Lovelace, Como, Tenn., and escaped with a large amount of miscellaneous jewelry and a quantity of dry goods.

Douglas Farrell, Warren, Minn., has donated a silver shaving cup as the first prize for the highest score at bowling for the current month. Only residents of the county are allowed to compete.

Invitations are out for the wedding of Miss Anna Patterson to Harry T. Lander, with Solomon Marks, Lawrence, Kan. The wedding will take place this evening, at the home of the bride's parents, 1011 New Hampshire St., Lawrence, Kan.

The show window of J. Hohmeyer, Stroudsburg, Pa., was broken last week in rather a peculiar manner. A spirited team attached to a light wagon ran away, and, in turning a sharp corner, caused one of the wagon wheels to fly off and plunge through the window.

The death is announced of Rowland L. Morgan, for many years employed as watchmaker by the Elgin National Watch Co., Elgin, Ill. Mr. Morgan died suddenly, at his country home, near Pensacola, Fla., after eating a prepared breakfast food from an original package received by mail.

J. C. Kirkpatrick, Augusta, Me., has moved his jewelry business to 231 Water St., having arranged to share the quarters of the Singer Sewing Machine agency. Since the fire in his store, last February, the jeweler had been located in temporary quarters at 191 Water St.

A bill of sale was placed on record last week reciting the transfer of the interest in the establishment of Sweeney & Fredericks, Houston, Tex., held by Mrs. Lottie B. Fredericks, to J. J. Sweeney. The consideration named is $22,000, and the bill of sale calls for the transfer of all interests in the business.

Mayer Rothschild, a retired clothier and jeweler, of Shamokin, Pa., has received a letter from a New Jersey metallurgist, informing him that he had found gold and silver in the sample pieces of ore taken from Mr. Rothschild's mine in Mahantango Valley, and advising Mr. Rothschild to mine the place at once.

The president of the New Britain Business Men's Association, at the association's annual meeting, held Thursday, touched upon the Itinerant Vendor law which the jewelers of Connecticut were very active in getting adopted. He said: "One of the objects of this association and of the State association has been to regulate, if possible, the so-called itinerant vendor, meaning by this the party who comes into our city with a stock of miscellaneous goods, almost invariably of the cheapest description, putting out flaming signs, drawing crowds of our people off the streets and working them up to a point where they will buy this worthless stuff, and while the goods do not compete with any of the goods that the legitimate dealers sell, it takes just so much money out of the pockets of our people and leaves them with so much less to expend with us.

H. Schinbaum, who claims to be a jeweler, of Montgomery, Ala., was arrested last week and fined $50 and costs in the Recorder's Court of Montgomery, on the charge of petit larceny, preferred against thim by three negroes, who alleged that Schinbaum intentionally swindled them out of a certain amount of money.

Through a typographical error it was reported last week that J. M. McKinney, East Liverpool, O., had been adjudged a bankrupt with liabilities amounting to $3,500. The item was intended to refer to W. J. McKinney, who failed many years ago. The business of J. M. McKinney is reported to be prosperous, and the error is, therefore, to be regretted.

The trustee in bankruptcy for Brown & Willis, Fitchburg, Mass., has sold the stock and fixtures of the concern for $2,750, which is two-thirds of the value at which they were inventoried. This was the best offer received. The proceeds of this sale will be held until a final adjudication by the Court on the validity of the chattel mortgage credited against the stock.

The following assessments are announced as applying to Connecticut jewelry firms: Factories "L," "M" and "P," of the International Silver Co., $202, 503; R. Wallace & Sons' Mfg. Co., Wallingford, $174,600. Individual taxes include: Col. W. J. Leavenworth, $5,880; L. M. Monroe estate, $9,521; D. E. Morris, $24,766; Morris E. Leavenworth, $6,710; C. H. Tibbits, $10,550; F. A. Wallace, $22,968; Miss H. Wallace, $8,030.

Trans-Atlantic Voyagers.

TO EUROPE.

J. O. Jacot, with Emile Jacot, Quebec, sailed Friday on the *Cedric*.

S. K. Jonas, of Jonas & Brod, New York, sailed Saturday on the *Etruria*.

Meyer Goodfriend, of Goodfriend Bros., New York, will sail to-day on the *St. Paul*.

S. H. Bauman, of the Bauman-Massa Jewelry Co., St. Louis, Mo., will sail tomorrow on the *Blucher*.

J. Parker Ford, of Ford & Carpenter, Providence, and Oscar Tewels, with Swartchild & Co., Chicago, sailed Thursday on the *Auguste Victoria*.

John C. Dueber, of the Deuber Watch Case Mfg. Co., Canton, O., accompanied by his daughter; August Beucke, of the Crescent Watch Case Co., Newark, N. J.; Henry Fera, of Fera & Kadison, New York; Jacob Strauss, of Jacob Strauss & Sons, New York, and Julius Spandau, of Spandau Bros., Pittsburgh, Pa., and C. A. Longstreth, Philadelphia, Pa., accompanied by his wife, sailed yesterday on the *Kaiser Wilhelm II*.

FROM EUROPE.

Geo. Greenzweig, of Geo. Greenzweig & Co., San Francisco, Cal., returned Saturday on the *Campania*.

Julius Van Vliet, of the Van Vliet, Latz Co., Berlin, Germany, arrived last week on the *Kaiser Wilhelm II*.

Canada Notes.

R. M. Biggs, Ottawa, is retiring from business.

G. A. Richardson, Dunnville, Ont., is taking an optical course in Toronto.

Miss Emily Taylor, of J. Taylor & Co., Hamilton, Ont., died last week of pneumonia.

W. H. Hopper, Cobourg, Ont., accompanied by his wife, is spending a few days in Toronto.

A. R. Watson, Newmarket, Ont., is in Toronto, having just recovered from a severe attack of illness.

F. C. Tansey, Montreal, who consented to assign a short time ago, has now filed his statement, showing liabilities of about $2,000.

The trustees have wound up the insolvent estate of J. W. Spring, Rossland, B. C., which has realized 80 cents on the dollar net for the creditors.

One of the most handsome trophies ever presented in sporting circles is the one given by Mackie & Co., of White Horse Cellar fame, through William Farrell, Montreal, for competition in some branch of sport, which Arthur Farrell has not yet decided upon. The trophy is not the ordinary shield, but is something entirely new. It is a snuff mill. The head is that of a north of Scotland sheep, silver mounted. The tips of the horns are sterling silver with an amethyst on the point, making a Scotch thistle. Surmounting the head is a sterling silver snuff mill with a "White Horse" and a fine specimen of Cairngorm stone. Attached by chains are all the requisites in the way of a snuff stirrer, spoon, brush, comb, etc.

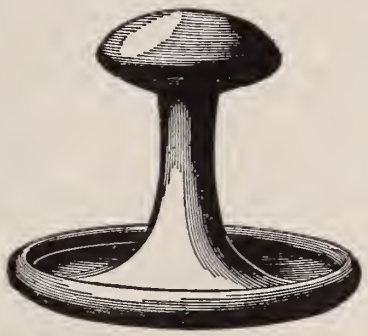
Albany.

Myer Morje, traveling representative of Miller Bros., is ill.

Jacob Miller has returned from a trip to the northern part of the State.

P. D. F. Goewey, who has been ill with la grippe is able to be around again.

F. W. Hoffman, 81 N. Pearl St., has returned from New York, where he has been on business.



James Mix, who has been ill for some time, was able to be at his place of business Saturday.

Isaac Brilleman is to retire from business to-morrow and the store occupied by Mr. Brilleman at 31 N. Pearl St. will be taken possession of by the American Express Co. after May 1. Two employes of Mr. Brilleman are to establish a store on S. Pearl St. in a building recently purchased by Mr. Brilleman. It is believed that a large amount of the stock remaining in Mr. Brilleman's store will be bought in by the new concern.

For stealing a watch from the house 271 Main St., Willimantic, Conn., occupied by Mrs. Zoe Brissette, Solomon Geminder, a New York jewelry peddler, was last Thursday, in Police Court, fined $7 and costs and sentenced to jail for 30 days, the charge against him having been changed from statutory burglary to petty larceny, as Miss Brissette, from whose room the watch was taken, could not say whether the door of the room was closed or open.

The Giant of Collar Buttons

IN QUALITY,
IN SALES.

One Million Five Hundred Thousand Krementz One-Piece Collar Buttons made and sold within the last year. . . . . .

WHY? Because of their HIGHEST QUALITY, BEST CONSTRUCTION, GIVING THE MOST WEAR, AND GREATEST COMFORT and their IRON-CLAD GUARANTEE.

To verify this we invite the trade to read **"The Story of a Collar Button, with Illustrations;"** which may be had **FREE** for the asking, and to try the experiment suggested on page 5 of that booklet.

Extract from "Printers' Ink," Nov. 23, 1898.

The Little Schoolmaster now suggests, to every pupil in his class, to send a two-cent stamp to Krementz & Co., 49 Chestnut Street, Newark, N. J., and ask to be favored with a copy of their leaflet, "The Story of a Collar Button." Afterward, if any pupil will send to *Printers' Ink* another leaflet, new or old, that is half as good as this one, or that approaches it in excellence, the deserving student will be rewarded with one of *Printers' Ink's* souvenir spoons as an acknowledgment of his discovery and contribution. "The Story of a Collar Button" is the best piece of advertisement construction that has come to *Printers' Ink's* attention in the yeat of our Lord 1898.

Should you wish to utilize this booklet to increase your collar button business, we will, on receipt of your order, print your card upon and send you a quantity of them.

Krementz One-Piece Collar Buttons are stamped as follows, ON BACKS:

Patent sustained by United States Supreme Court.

Quality and Construction have made our reputation.

All Krementz Collar Buttons are Manufactured by

KREMENTZ & CO.,

in their Factory,

49 Chestnut Street,

Selling Agents to Jobbing Trade.

Optical Notes and Briefs.

K. P. Sumby has started an optical business in Long Eddy, N. Y.

Edmund J. Blake, optician, New York, is now in San Francisco, Cal., en route to Honolulu.

Charles Johnson, Marshall, Minn., has added an ametropometer to his optical equipment.

Daniel K. Cole & Son, Woonsocket, S. D., have added an optical parlor to their establishment.

George E. Whitlock, optician, Boise, Idaho, has considerably improved his optical department.

A. Loersch, optician, Santa Barbara, Cal., is visiting San Francisco, Cal., combining business with pleasure.

Herbert C. Watts, Syracuse, N. Y., left Thursday morning for a week's stay at Fair Haven, on Lake Ontario.

Dr. Kennedy, eye specialist, who located in Harrisburg, Pa., a few weeks ago, has decided to return to Kentucky.

A. G. Barber, of the Globe Optical Co., Boston, Mass., is taking a few days' rest at his homestead in Epping, N. H.

R. V. Lucker has returned to his home in Mediapolis, Ia., after completing a course in optometry in one of the optical schools of Omaha, Neb.

D. H. Darling, optician, Guilford, N. Y., is making an extended business trip throughout the northern part of the State in the interest of his optical business.

M. Zineman & Bro., opticians, Philadelphia, Pa., last week celebrated the 25th anniversary of their opening by distributing free to their patrons a serviceable brass-rimmed eye shade.

The Culverhouse Optical Co. has removed from 74 Yonge St., Toronto, Can., to more commodious quarters next door, where it has better facilities for its increasing trade.

At the regular monthly meeting of the Rochester Optical Club, held Tuesday, April 21, in Rochester, N. Y., Dr. E. J. Bissel delivered an interesting lecture on "Imperfect Binocular Vision."

Frederick F. Mesmer, Syracuse, N. Y., has returned from New York, where he had been on business relating to the opening of his new optical offices in Syracuse, cor. Warren and Washington Sts.

The Kuhle Mfg. Co. has been incorporated in St. Paul, Minn., to manufacture surveyors' instruments, optical and stereopticon supplies. The company commences business May 1 and has a capital of $50,000. The incorporators are Walter H. Dickerman, Arnold Kuhle and C. D. Bruce Tudor, all of St. Paul.

Oscar Caspari, head optician at Archie Tegtmeyer's establishment, Milwaukee, Wis., is studying the manufacture of watches in the Old World, and writes from Metz that he has visited many of the leading cities of Europe. Mr. Caspari will return to Milwaukee to resume his business duties after his course of studies is completed.

R. B. Oberteuffer, manufacturing optician, Davenport, Ia., who recently passed away, left a widow and a son, aged eight years. T. S. Richards, who managed the store for the deceased, has purchased the same from the estate and will continue the business at the same location. He was with Mr. Oberteuffer for eight years and was manager for three years.

The wedding of Briggs S. Palmer, manager of the John W. Sanborn Optical Co., Boston, Mass., to Miss Marianne Gaillard Ashcroft, of 101 N. Common St., Lynn, will take place to-night at the home of the bride. The ceremony will be performed at 7.30 P. M., and will be followed by a reception. Mr. Palmer and his bride will return from their wedding trip in about two weeks and will take up their residence at 4 Park St., Brookline.

At the regular meeting of the New England Association of Opticians, held in Boston last week, Miss L. F. Marble, the first lady member, was voted in. At a previous meeting there was considerable discussion as to the advisability of admitting ladies, but it was finally voted to accept them as members. Other names accepted as active members were: Samuel W. Baker, Rockland, and David S. Ferguson, Fall River. It was voted to hold the annual meeting and banquet at the Hotel Brunswick, May 19, when officers will be elected for the ensuing year.

The regular monthly meeting of the Buffalo Optical Society of Western New York will be held Friday evening, May 1, at 8 P. M., in room 8, of the Central Y. M. C. A. building, corner of Mohawk and Pearl Sts., Buffalo, N. Y. A feature of the meeting will be a practical demonstration on "Spec-

To the Trade.

THE copartnership of Potter & Buffinton, having terminated by the death of Col. Isaac M. Potter, the property, business, etc., of the firm have been transferred to the Potter & Buffinton Company, a corporation incorporated under the laws of the State of Rhode Island, and the high standard maintained by that firm for so many years in the jewelry trade will be sustained by the corporation.

The officers are John M. Buffinton, of the old firm, President and Treasurer; Reuben Mason, for 34 years in charge of the New York office of the firm, Vice-President; Edgar A. Woodmancy, for 30 years with the old firm in charge of its books, etc., Secretary.

The corporation will continue the factory and office at No. 7 Eddy Street, Providence, R. I., and Mr. Mason will remain in charge of the New York office at 65 Nassau Street.

All debts due to the old firm are payable to the Potter & Buffinton Company.

Thanking you for favors to the old firm for so many years, and soliciting your future patronage,

We are,

Very respectfully yours,

POTTER & BUFFINTON COMPANY.

tacle Fitting," by Secretary R. F. Williams. Special provision will be made for members desiring to attend the convention of the American Association of Opticians, to be held in Atlantic City, N. J., July 7, 8, 9.

Eighth Annual Meeting of the Central New York Optical Society

SYRACUSE, N. Y., April 24.—The eighth annual meeting of the Central New York Optical Society was held last Wednesday in the Law College lecture rooms, 111 University Block.

The business meeting was opened at 7.45, with President H. C. Watts presiding. The minutes of the previous meeting were read by Secretary A. G. Golder and approved. The applications for membership of Jesse W. Hall, of Cazenovia; Daniel L. Snyder, Syracuse; J. P. Stiles, Arcade; Jules La Rocque, Plattsburg, and Otis C. De Long, Oneonta, were reported on favorably and they were duly elected members of the society.

The auditing of bills and the report of the treasurer were followed by the reading of various communications by the secretary. Resignations were received from C. B. Hibbard, Pulaski; Clarence Sherwood, Auburn, and D. W. Beadel, New Castle, Pa., and will be accepted when the by-laws are complied with. Announcement was made of the annual convention of the American Association of Opticians, which will be held July 7, 8 and 9, at the Royal Palace Hotel, Atlantic City, N. J., and also of the annual meeting of the New York State Optical Society, June 9-10, at Rochester.

The election of officers for the ensuing year was next in order and resulted as follows: President, Wm. D. Oertel, Syracuse; vice-president, W. B. Gorham Camillus; secretary, James Holden, Syracuse; treasurer, G. N. Luckey, Baldwinsville; librarian, A. G. Golder, Syracuse. H. C. Watts and A. G. Golder declined reelection as president and secretary, respectively. An extended discussion in regard to the advisability of holding the meetings more frequently was entered into, the consensus of opinion being that the old regime of meetings once a month was the better. It was also suggested that it would be advisable to send out notices of the meetings a week in advance of the date of holding them.

At 8.30 the opticians gave their attention to the address of the evening by J. Spencer Purdy, M.D., president of the Seneca County Medical Association, on "The Relation of the Optician to the Physician."

At the close of Dr. Purdy's address, which was listened to with close attention, there was a general discussion of the relative merits of the appellations of eyesight specialists, refractionists and opticians; also of the various other points brought out in the Doctor's address. There followed a discussion of difficult cases met with in recent individual practice, after which the opticians adjourned to meet again in June.

Among those in attendance were: F. L. Swart, Auburn; A. W. Golder, Seneca Falls; G. P. Bell, Waterloo; W. B. Gorham, Camillus; Edwin Wilcox, Fulton; G. N. Luckey, Baldwinsville; H. C. Watts, A. G. Golder and D. L. Snyder, Syracuse.

Incorporation of the New Jersey State Optical Society.

NEWARK, N. J., April 23.—The New Jersey State Optical Society, which was recently organized in this city, filed a certificate of organization at the County Clerk's office to-day. The trustees are L. B. Hilborn, of this city; Otto A. Stillman, New Brunswick; Robert G. Smith and Adolph Walters, Jr., Jersey City; Frederick H. Hewlett, Paterson.

Fire at Columbus, O., Damages Stocks of Jeweler and Optician.

COLUMBUS, O., April 26.—A disastrous fire broke out at 2.30 o'clock this morning. The damage amounts to $600,000. Among the many sufferers was T. T. Tress, whose jewelry store is at 99 N. High St., and F. W. Wallis, an optician at the same address.

The damage to Mr. Tress's stock was only slight. Mr. Wallis, who occupies part of the same store, estimated his loss at $3,500.

Jacksonville, Fla.

Hess & Slager have been appointed official watch inspectors for the Atlantic Coast Line.

J. Shaw, Tampa, representing the International Silver Co. and the Wm. L. Gilbert Clock Co., was in town last week.

L. I. Stephens is suffering from rheumatism in the wrists of both arms and is unable to occupy his usual place at the repairing table.

R. T. Riles has just returned from Braidentown, Manatee County, where he had been visiting his brother, W. L. Riles, who recently removed his stock to that place from Lusburg. He has fitted up an establishment in his new location which he believes will meet the demands of the trade in Manatee County, which is one of the best orange growing and trucking counties in South Florida.

T. McKinney, formerly of Eldon, Mo., has purchased the business of Bruno Mantele, Hutchinson, Kan.

W. H. Galloupe, with the Crescent Watch Case Co., returned last week from a two months' trip.

Morris Silverberg, with the Stein & Ellbogen Co., left recently for an extended western trip.

George Binner, manufacturers' agent, has returned from a visit to some of the eastern factories.

Robert Fechtner, a retail jeweler at 5053 South Ashland Ave., has been succeeded by Max Strohm.

George Eustis, of Eustis Bros., Minneapolis, Minn., looked up his old friends in this city last week.

J. C. Hirt, secretary of the Juergens & Andersen Co., has been ill with pneumonia for the past two weeks.

C. Heegen, 2424 Wentworth Ave., who had been ill with pneumonia for some weeks, is now convalescent.

Charlie Garlick, western representative for Charles F. Wood & Co., left last week for a trip through the north.

Harry Hahn, of H. F. Hahn & Co., returned from the east Sunday after having left his family at Atlantic City, N. J.

J. M. Kadan, Grand Haven, Mich., accompanied by his wife, was in this city last week looking over various lines.

Swartchild & Co. and the Western Watch Case Mfg. Co. have been admitted to membership in the Chicago Jewelers' Association.

Otto Young, of Otto Young & Co., and his daugnter, Miss Laura Young, have returned from a northern pleasure trip.

J. W. Stoneburner, western representative for the J. G. Fuller Co., has returned from a visit to the factory of the company.

Edw. Walthier, western representative for the D. F. Briggs Co., leaves this week for a visit to the factory of the company.

Charles J. Jacobs, secretary and western representative of the Knickerbocker Silver Co., left last week for his western territory.

C. J. Schroeder, Manning, Ia., has opened a new store at that place and was in Chicago last week placing orders for his Spring stock.

F. L. Pettee, traveling from the factory of the Waterbury Clock Co., spent a few days of last week at the local office of the company.

George D. Lawrence, representing Reed & Barton, stopped over to visit the local offices of the company last week while en route west.

"Moe" Loeb, general representative for the Dueber-Hampden companies, left this city last week, having spent two weeks visiting the local trade.

Dave and Eli Gutmann, of L. Gutmann & Sons, Cincinnati, were in this city last week to attend the wedding of Miss Alma Yondorf and Lyman Hirschburg.

J. W. Forsinger was detained at his home several days of last week by a slight illness. R. N. Blair, with J. W. Forsinger, left for his territory in the northwest last week.

J. Lott Losey, of Beach & Losey, South Bend, Ind., ran into this market for a few days last week to make additional purchases for the new store of the firm at South Bend.

Eugene Edelstein, foreign representative for the Illinois Watch Case Co., has returned from El Paso, Tex., where he had been seriously ill and confined to his bed for several weeks.

W. F. Adams, representing factory "L" of the International Silver Co., left last week for a western trip. C. A. Barnum, representing factory "E" of the same company, has returned from his territory.

Walter King, of the local office of the Ostby & Barton Co., and Theo. W. Foster & Bro. Co., died Friday morning, after an illness of six months. The funeral was held from his late residence at 31st St. and South Park Ave., Sunday.

R. A. Boyer has accepted a traveling position with Norris, Alister & Co. Sam Amberg, W. J. Beard and L. W. Williams, traveling for this house, were in the city last week to replenish their sample lines.

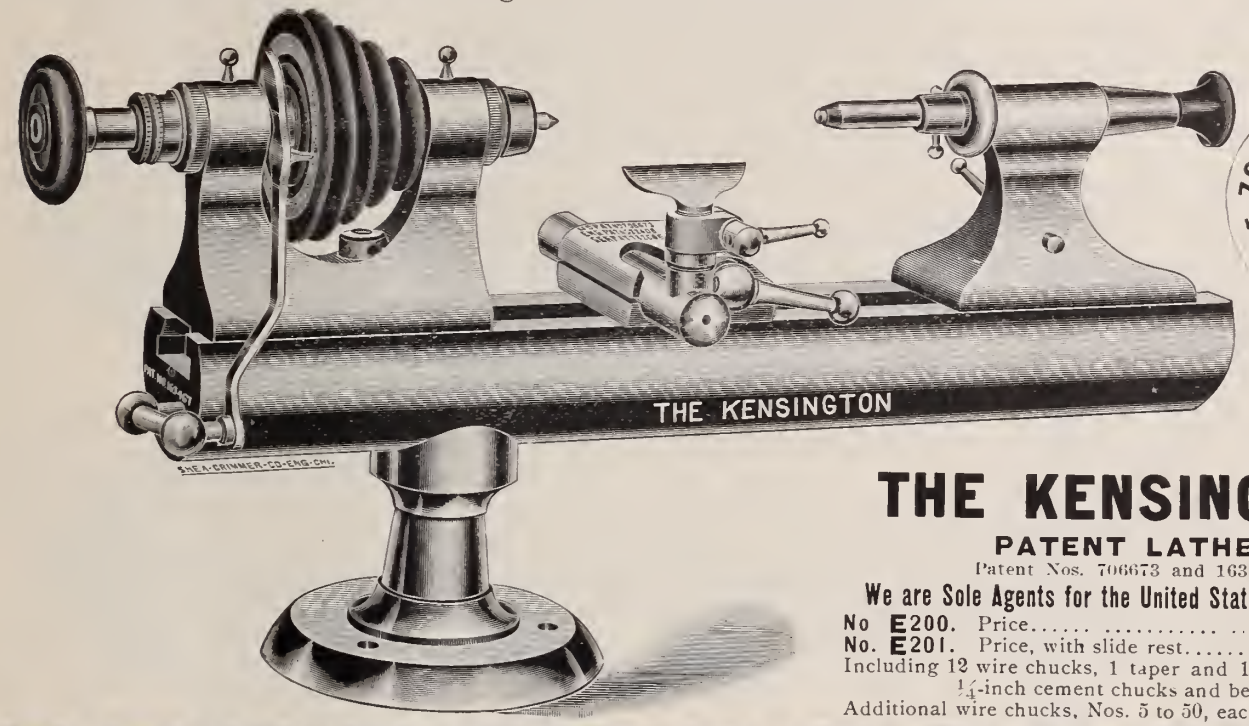
Antone Brookman, who died recently in this city, was a native of Germany and began business as a goldsmith. He was once engaged to make a pair of gold bracelets and a gold necklace for Queen Victoria. He was 85 years old.

The firm of Youngdahl & Lilja, retail jewelers at Ogden Ave. and Madison St., this city, dissolved April 18, John R. Lilja and Arthur Lilja retiring. Alfred Y. Youngdahl will continue the business under his own name, and will assume all liabilities of the firm.

Hermann & Co., importers of precious and imitation stones, of this city, will remove, May 1, to New York. This house has been established in Chicago for 17 years and for 10 years has occupied quarters in the Masonic Temple. The location of the firm's new quarters in New York will be announced next week.

Frank McGuire, Jamestown, O., brought his 11-year-old daughter to this city last week for the removal of a plaster cast, in which her leg had been encased by Dr. Lorenz, the noted Vienesse surgeon, during his first visit to this city. Mr. McGuire's local friends will be glad to hear that the operation was successful.

Among the buyers in town the past week not elsewhere mentioned were: B. D. Robinson, Albion, Mich.; J. Liebenew, Green Bay Wis.; John S. Murphy, Pontiac, Ill.; Mort Ritt, Nunda, Ill.; R. A. Davison, Rock Falls, Ill.; Fred Bosecker, Jr., Guttenberg, Ia.; William Connolly, Cresco, Ia.; Carl Rieger, Hammond, Ind.; F. Borzhardt, Kirkland, Ill.; D. W. Pennell, Ohio City, O.; J. Schmelzer, Centralia, Ill.; W. H. Davis, Bronson, Mich.



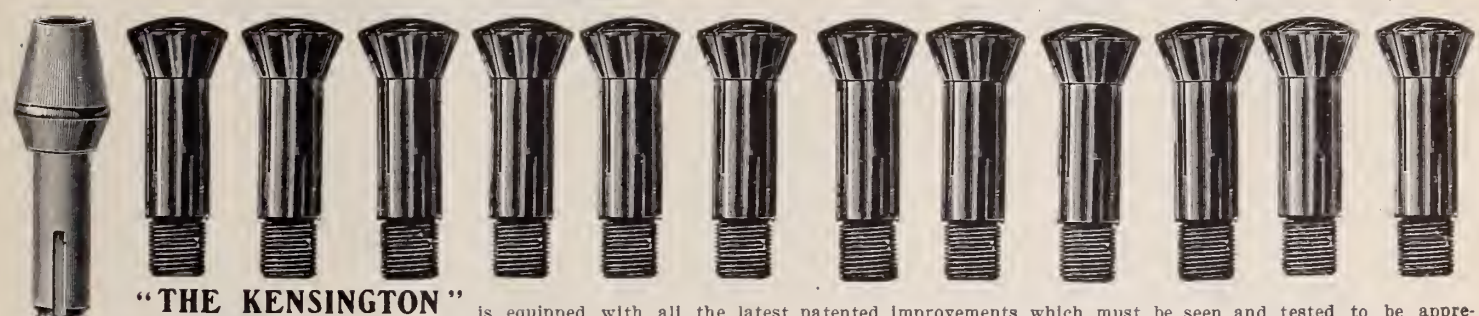
William Hellberg, Marshalltown, Ia., has considerably enlarged his stock and improved the interior of his store room.

W. B. Wilcox, Troy, N. Y., official watch inspector of the New York Central, the R. W. & O. and M. & N. railroads, has just completed his inspection of watches of the engineers and conductors of these roads.

ESTABLISHED 1870. ESTABLISHED 1870.

SWARTCHILD & CO., Jewelers Building, 134 & 136 Wabash Ave. Chicago, Ill.

Our Kensington No. 2 excels all makes in advancement; its practical improvements are appreciated by progressive "watchmakers." A solid bed lathe can be sent on approval. Each lathe guaranteed absolutely. Interchange with Webster-Whitcomb.



Our 700-Page Catalogue sent upon application. SUPPLEMENT No. E.

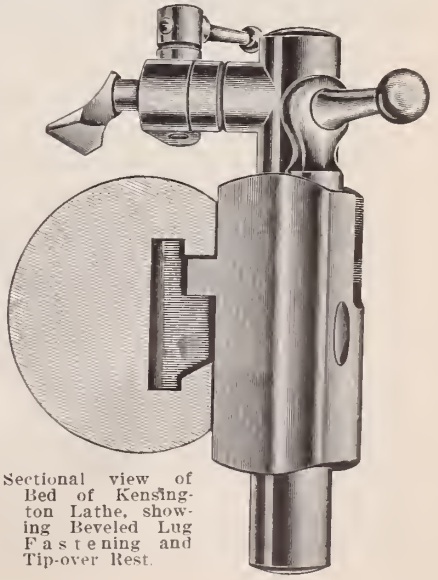
THE KENSINGTON
PATENT LATHE.

Patent Nos. 706673 and 163467.

We are Sole Agents for the United States and Canada.

No E200. Price.....$27.50
No. E201. Price, with slide rest..... 43.50
Including 12 wire chucks, 1 taper and 1 screw chuck, 6 ¼-inch cement chucks and belting.
Additional wire chucks, Nos. 5 to 50, each..... $0.50

"THE KENSINGTON" is equipped with all the latest patented improvements which must be seen and tested to be appreciated. Particular attention is called to the style of fastening the Rest, Head and Tailstock to the bed of Lathe. These attachments are fastened by means of a beveled lug (see sect. view), which will always bring these parts in perfect alignment. With this improvement the lathe must remain in perfect line, something which can never be maintained in the old-style shoe fastening. Another special feature is the Sliding Tip-Over Rest which can be adjusted to all positions and can be tightened with one motion of the hand.



"OUR PERFECT" COMBINATION BEZEL, WHEEL AND PLATE CHUCK.

Kansas City.

C. E. Russell is getting together cuts and material for a very handsome catalogue.

W. B. Needles has accepted a position as optician with the Geo. B. Peck Dry Goods Co.

Margolis & Metzer had expected to have their new catalogue out by May 15, but it has been delayed by the making of the cuts.

Herbert Koppel, with the Meyer Jewelry Co., will soon start on an extended trip through northern Kansas, Nebraska and Iowa.

W. A. Montague, salesman for Woodstock, Hoefer & Co., is selecting a new lot of samples preparatory to starting on an extended trip.

Miss Mabel Schaak, daughter of F. A. Schaak, Kansas City, Kan., was married to Roy Woods at St. Mary's Church last Wednesday.

Harry B. Carswell has gone to St. Louis to attend the meeting of the Masonic Grand Lodge being held there, and incidentally to look after some business matters.

Walter Jaccard, of the Jaccard Jewelry Co., has been in New York on business for the last 10 days. The firm has donated a diamond ring to the Y. M. C. A. as a prize for the person who secures the greatest number of new members.

The following out-of-town merchants visited this city during the past week: T. S. Lidstone, Dearborn, Mo.; H. A. Tibbals, Osawatomie, Kan.; L. S. McMamar, Highland, Kan.; Mr. Moore, Smith Center, Kan.; F. S. Hester, Lawrence, Kan.; J. E. Hathaway, Parkville, Mo.; Geo. A. Young, Moberly, Mo.; F. M. Dillon, Bonner Springs, Kan.; Walter Sperling, Seneca, Kan.; A. J. Carruth, Herington, Kan.; Jos. Mosbacker, Wichita, Kan.; J. S. Reed, Milan, Mo.; A. Rosenfield, Leavenworth, Kan.

Indianapolis.

Gus Craft, of A. P. Craft & Co., visited Muncie and Anderson last week.

Smith & Gray are preparing to move to handsome new quarters on "the point" of Washington St. and Kentucky Ave.

A. R. Cooper & Son, Mooresville, Ind., have recently installed six new show cases in their establishment. The cases are made of oak and plate glass, all the work of Mr. Cooper himself. The workmanship and finish are of a superior quality.

Out of town buyers in the city last week included: Jos. Hummel, Jr., Muncie, Ind.; H. L. Root, Columbus, Ind.; C. A. Williams, Terre Haute, Ind.; J. W. Thompson, Danville, Ind.; A. R. Cooper, of A. R. Cooper & Son, Mooresville, Ind.; A. Pursel, Noblesville, Ind.

The jewelry stock of John P. Rogers and the optical stock of Miss Stella V. Rogers, have been removed from 114 N. Illinois St. to 148 N. Illinois St. The new store is larger and more modern than the old quarters, where "Jack" Rogers had been located for the past 30 years.

Earl C. Sullivan, who sandbagged and attempted to rob Ed. Lovell in the Burnet House, Cincinnati, O., April 17, is an Indianapolis boy. He is about 21 years old, of good address and refined manners. His father is a well-known traveling salesman. The young man always bore a good reputation in this city, and it was with much surprise that the story of his trouble in Cincinnati was heard in this city.

St. Louis.

TRADE CONDITIONS.

Business was [illegible] quiet with the retail jewelry trade last week. A good trade is looked for this week, when the dedication of the World's Fair will take place. The great number of visitors will no doubt make it lively for nearly all the retailers Members of the wholesale trade are enthusiastic over the business they are doing. It is much better than it was during the corresponding week of last year.

J. Beilenson, Helena, Ark., made a business trip to St. Louis last week.

Mr. Goldstein, of Goldstein & Co., Oklahoma City, Okla., was calling on old friends in the trade here last week.

The wife of W. E. Cannon, of W. E. Cannon & Co., Kansas City, Mo., was a visitor to this city during the past week.

Out-of-town visitors to this city last week included: Roy Goulding, Alton, Ill.; H. B. Carswell, Kansas City, Mo.; W. J. Krug, Staunton, Ill.; Mr. Ogden, of Brown's Jewelry Store, Hannibal, Mo.

Morris Eisenstadt, of the Eisenstadt Mfg. Co., who broke his ankle a few weeks ago, is improving rapidly. He is now managing to get around with the aid of a cane and is almost as sprightly as he was before the accident.

Frederick Lewis, who was recently accused of having received stolen property which had been taken from the jewelry establishment of J. M. Huber, Duluth, Minn., was acquitted in the Superior Court last week, the complainant not having sufficient evidence to convict.

Minneapolis and St. Paul.

Frank Anderson is a new manufacturing jeweler for Rentz Bros., Minneapolis.

Geo. R. Holmes, St. Paul, has moved to more commodious quarters at 415 Robert St.

W. E. King, Chicago, is a new manufacturing jeweler for M. Thouren & Co., Minneapolis.

Jesse Foot, with Moses L. Finkelstein, St. Paul, was bereaved last week by the death of his wife.

W. E. Main, Minneapolis, has returned after a few days spent with Albert Young hunting at Sand Lake.

T. J. Thompson, Barron, Wis., who recently bought the business of C. E. Barker, Bruce, Wis., was in the Twin Cities last week.

Frank D. Hill, United States consul at Amsterdam, recently addressed the students of the Stone school of watchmaking, St. Paul.

"Bennie" Gates, alias "Diamond Bennie," recently withdrew his plea of not guilty to larceny of the S. Jacobs & Co. diamonds in Minneapolis, and entered a plea of guilty to larceny in the second degree. The loss is placed at $695.

Montana.

L. Chatelain, watch repairer and jeweler of 141 W. Front St., Missoula, has made arrangements to leave the city and is closing out his stock.

B. N. Bell, Chinook, has sold his stock of jewelry and watches to J. F. Williams. Mr. Bell intends to stay and assist Mr. Williams for a little while and will then go to Idaho.

A committee has been formed to look after the development of Hayden and is publishing a list of the wants of the new town. Among these is a jewelry store, and it is thought an efficient watch repairer would do good business there.

The Montana Onyx Co. has just been organized as a corporation and will at once begin operations on its properties north of Manhattan near Bozeman. The officers are: O. P. Chisholm, president; Charles Chisholm, vice-president, and R. B. Chisholm, secretary.

Cincinnati.

Joseph Kenkel is again enlarging his store on Main St., and is putting in new fixtures.

The Miama Silver Co. is moving to 118 and 120 W. 2d St., where it has taken a building for manufacturing purposes.

D. J. Gutmann, of L. Gutmann & Sons, left last week for New York on a two weeks' trip for business and pleasure.

The Wadsworth Watch Case Co. is beginning to work on its Fall line. H. A. Wadsworth, of this company, is contemplating a trip to Europe during the Summer.

Tony Thoma, of Thoma Bros., has returned from a 10 weeks' vacation in Florida, which he visited for his health. He is now much improved, and will soon start on the road again.

H. VanReeth, the diamond cutter for Joseph Noterman & Co., left last week for a two months' trip to Europe, where he will visit the diamond markets and make purchases for this house.

Ben Wilke, who had been for 10 years with Louis H. Gooseman, 909 Central Ave., has severed his connections with this house and has gone to Lebanon, O., where he will engage in the same business.

Charles Harris, a colored man, was arrested last week for throwing a stone through the window of E. L. Raisbeck, 620 Vine St., and stealing 10 watches, some rings and other jewelry. The stolen goods were found on the prisoner when he was captured.

Theodore Neuhaus & Co. have received the special order for an elaborate invitation card, of pure gold, to be given by the Cincinnati Gymnasium to Mr. and Mrs. Taft, who also recently gave $5,000 toward the building fund. This card will cost several hundred dollars and is to be a handsome piece of gold work.

Gebhardt Bros. have put in two windows 6x8 feet in their factory, and have added another row of benches on the south side. They have had the entire place repainted, and the new decorations, with the addition of large palms, add to the general comfortable appearance of the factory. The office is now finished in ebony.

All the architectural faience for the dec-

orative frieze of four stations of the great New York Subway has been ordered from the Rookwood Pottery Co. and is now being made in Cincinnati. The work will have the beautiful glaze and the pattern will be the old Greek egg and dart design. The panels for the interval of the frieze are in bold relief. The decorations are in charge of W. P. McDonald, J. Menzel and S. G. Buot, of the Rookwood Pottery Co.'s staff of artists.

M. Kock and Wm. Niehaus claim to have discovered a solution of solder that will hold aluminum, and they have applied for a patent on the same.

The hearing on the charge against Earl Sullivan, the Indianapolis youth who, as published in the last issue of THE CIRCULAR-WEEKLY, tried to sand-bag Col. Ed Lovell, a jewelry salesman, came up last week. Mr. Lovell asked the court to be lenient with the accused, and the boy got off with a $200 fine and a severe reprimand. A workhouse sentence was first imposed, but this was later remitted, and the young man was released when the fine was paid by his attorney. Sullivan went home with his mother, promising never again to transgress the law. The sentence was made light, owing to the previous good character of the youth and the respectability of his family. Mr. Lovell stated that he escaped death only because of the rottenness of the stocking of which the sand club was composed, as the cloth burst and the sand went all over him, thus modifying the force of the blow. Col. Lovell was induced to refrain from pressing the charge by the tearful pleadings of the mother of his assailant.

Pacific Coast Notes.

I. B. Nason, Del Mar, last week made a business trip to Redding, Cal.

M. E. Bogart will soon open a store in a new building on Main St., Ventura, Cal.

Ernest W. Wright, Bakersfield, is moving his stock to a new location at 1406 19th St.

A. E. Springborg, Redlands, Cal., will move from his present quarters to the room adjoining the Union Bank on West State St.

Frank B. Sparks, Loyalton, Cal., has added a new show case to his jewelry establishment.

F. C. Dukeman has severed his connections with the firm of Charles Adams, Riverside, Cal., and has taken his old position with J. P. Trafton, Los Angeles.

On the property now occupied by the store of M. Barborka, on Center St., Los Angeles, the proprietor will erect a one-story building with a frontage of 80 feet.

Anderson Bros., Auburn, Cal., have purchased the stock of H. C. Hotfilter, Sacramento. Bert Anderson will have charge of the latter establishment, while Wm. Anderson will remain in charge of the Auburn store.

It is reported in Solomonville, Ariz., that Dan Bowen has sold a number of onyx claims near Mayer. The amount is said to be $15,000. Mr. Bowen's claims are said to contain some of the finest onyx in that section. The purchasers were from Denver, Col.

Use the MOE Diamond Weight Gauge and Calculator

to determine the weight of stones while in the mounting. The gauge measures the diameter and depth, and by referring those two measurements to the book of tables that accompanies each gauge, the correct weight is shown. The book has 26 tables, showing weight of 1,700 diamonds from ¼ to 7⅝ carats inclusive. By its use you avoid chipping stones through removal from settings to weigh and save trouble and expense.

Gauge and book sent to any address; prepaid $5.00. Send for descriptive booklet and testimonials.

TRADE CONDITIONS.

The report among the wholesale jewelers for the past week is that trade still continues inactive. This condition is more noticeable in the city than in the interior towns. The retailers as a rule report that business is picking up daily, and is now better than it has been for some time.

F. E. Ward has severed connections with the W. K. Vanderslice Co.

J. D. Badgley, Anderson, Cal., is in town looking about for a new location.

M. Marshall, San Luis Obispo, Cal., made a flying trip to this city last week.

Henry Wolff will return this week from his long tour of the interior towns.

J. Gordino, Salinas, Cal., was a visitor to the wholesale trade here last week.

M. D. Scribner, Tombstone, Ariz., has been spending a few days in this city.

H. B. Oberlin, Fresno, Cal., was in San Francisco last week on his wedding trip.

L. H. Service, Madera, Cal., has just returned home after a week's stay in this city.

Charles Miner, Pleasanton, Cal., spent a few days in this city last week making purchases.

Henry M. Abrahams, manufacturers' agent, has opened his new office in the Mutual Bank building.

Francis L. Newcomb, Lovelock, Nev., was in San Francisco last week combining business and pleasure.

Alexander T. Lipman and H. H. Allen, representing the Morgan & Allen Co., have just returned from a two months' business trip.

Frank Van Fossen, who was recently burned out in Dunsmuir, Cal., spent a few days in San Francisco last week, making a number of purchases of jewelry. Mr. Van Fossen was married last Wednesday.

The Credit Men's Association of San Francisco will hold a banquet to-morrow night, and one of the prominent guests of the occasion will be Senator I. H. Wolfe, who was active in securing the passage of the new bulk law.

Frank Haley, shipping clerk for A. I. Hall & Sons, is going to take an extended trip through the east to visit the various factories. E. V. Saunders is now in Los Angeles on a 10 days' trip. A. G. Prouty, a traveling representative for the company, is in Humbolt County. C. F. Mead will shortly take a two weeks' vacation which he will spend in the southern part of the State.

A meeting was held, April 18, in the offices of Rothschild & Hadenfeldt, by the wholesalers of this city, for the purpose of discussing the advisability of organizing. Those represented were: Julius A. Young, Rothschild & Hadenfeldt, A. I. Hall & Sons, M. Schussler & Co., M. L. Levy & Co., Nordman Bros., Morgan & Allen Co., Carrau & Green, Ehrenberg & Wurkheim, W. E. Graves, Armer & Weinshenk, J. S. Lehrberger & Co., Geo. Greenzweig & Co., Adolph Eisenberg & Co., Alphonse Judis Co., Joel B. Jones and Henry Abrams. J. A. Young was appointed chairman *pro tem.*, and he appointed Mr. Hagan, with George Greenzweig & Co., as acting secretary. Within a short time Mr. Young will appoint a committee of five to make a thorough study of the workings of such an organization and report to the wholesalers.

Cleveland.

E. E. Critz, Elyria, visited this city one day last week.

Harry Downs, Bellevue, was in this city on business last week.

J. C. Sharer, Alliance, called at the wholesale houses here last week.

W. J. Eroe, of Hanna & Eroe, New Castle, Pa., spent Sunday here with his son.

Reuben Aronsen, a jeweler at 3 Prospect St., sent a stranger to get change for a $20 bill recently and is still waiting for the change.

E. H. Halle, with the Sigler Bros.' Co., is just recovering from a very severe siege of illness and will be back at his post within a few days.

E. N. Davis, Kent, O.; W. P. Carruthers, Oberlin, O., and W. C. Fisher, Lorain, O., were among the retail dealers in this market last week.

W. H. Kennon and Will Wagner, of the Sigler Bros.' Co., started on their regular Spring trips last week. Jack Spindler, of the material department of the same company, has been confined to his home for some days with an attack of blood poisoning, but is now improving rapidly.

John C. Dueber, of Canton, left a few days ago for a tour of Europe and all of the 2,000 employes of the big watch factory of which he is the head gathered at the depot to bid him *bon voyage*. Mr. Dueber will be absent for some time and will visit his old home before he returns. He has held himself pretty close to business for many years and rest and relaxation from business cares he now finds necessary.

509-511-513 Race St.,
CINCINNATI - - - OHIO.

Pittsburgh.

M. Kingsbacher, of Kingsbacher Bros., 505 Market St., is in Atlantic City this week.

W. W. Wattles, who has been spending several weeks in California, left that State Wednesday and is now on his way home. He will spend a week at Colorado Springs before returning to Pittsburgh.

James H. Johnston is the new representative for Heeren Bros. & Co. in the nearby territory. He succeeds C. D. Stuart, who is now employed by A. M. Andrews, in the Farmers' Deposit Bank building.

Retail dealers from neighboring towns who purchased goods from the local wholesale houses during the week were: F. W. Laban, Steubenville, O.; J. F. Murphy, Dawson, Pa.; Robert Hunt, Hunt & Collier, Uniontown, Pa.

L. W. Vilsack, of L. W. Vilsack & Co., was in Cincinnati last week completing arrangements for securing fixtures for the company's new store at Fifth Ave. and Wood St. The firm has sold its present fixtures to B. E. Arons.

Durbin & Fuhr are now installed in their new rooms, in Sixth St., where they have completely remodeled the inside and outside of the building. The new room is commodious and contains a gallery for displaying goods, which is an innovation for this firm.

S. & K. Hess, who recently opened a jewelry store at 926 Liberty Ave., have dissolved partnership, K. Hess retiring. The business will be carried on by S. Hess. S. Hess came to this city from St. Louis, where he had been in the jewelry business, and his former partner had been employed by L. Schmidt, Braddock.

Mr. George M. Reed, the aged retired jeweler, and father of J. A. Reed, who has been seriously ill at the home of his son in Bedford Ave., is recovering. Mr. Reed's life was despaired of for several days, but his condition changed and he has been gaining in strength ever since. His ultimate recovery is now expected.

Hoping to obtain a clue to the perpetrators, the police have suppressed the report of a robbery which occurred at Dorothy, April 21. Thieves entered the store of the Union Supply Co., at that place, secured jewelry, revolvers and trinkets valued at $200, and escaped. The perpetrators evidently had a skeleton key for the door, as entrance was gained by unlocking it. When the store was opened Wednesday the robbery was discovered.

Columbus, O.

T. T. Tress is spending 10 days in New York on business.

Perry M. Ford, formerly of 168 S. High St., is now settled in his new quarters at 43 E. Town St.

The New Columbus Watch Co., of this city, recently filed with the Secretary of State a certificate of reduction of capital stock from $200,000 to $30,000. Charles A. Kile is president and William Reel secretary of the company.

The report that W. S. Tussing is in hiding near this city, only awaiting the completion of certain business transactions before returning home, is absolutely denied by Mrs. Tussing and by his cousin, Attorney L. B. Tussing. The meeting to declare a dividend to the creditors of the missing jeweler has been postponed for one week to allow such creditors as have not yet filed their claims additional time in which to do so. It is expected that a dividend of five per cent. will be declared.

NOTICE OF REMOVAL.

WOLFSHEIM & SACHS,

MAKERS OF

FINE TRAYS and BOXES FOR JEWELERS AND SILVERSMITHS, announce that after May 1 their office and salesroom will be located in the store at **No. 40 MAIDEN LANE;** also, that after this date they will occupy their new factory at **No. 10 GOLD STREET,** near Maiden Lane.

They desire to express their thanks for past favors, and call the attention of the trade to their increased facilities for the prompt and efficient filling of orders.

New York, April 29, 1903.

"Koholia"

For Alcohol Lamps and External Use.

KOHOLIA is a methylic spirit, cheaper than alcohol and better for burning purposes. It can be relied upon, and we guarantee satisfaction with its use in connection with our lamps.

EVERYONE should stock it for the warm weather. It is used extensively in the summer for Traveling Companions, Chafing Dishes, Alcohol Stoves, etc.

WRITE FOR FULL PARTICULARS.

S. Sternau & Co.,

204 Church Street,

Cor. Thomas. NEW YORK.

Connecticut.

F. A. Wallace, Wallingford, accompanied by his wife, left last week for New York.

Chas. C. Strong, who has just been re-elected Treasurer of Hartford, was for many years a leading jeweler of that place.

Wallace A. Starkey, an old resident of Middletown, and for many years employed by the Middletown Silver Plate Co., has moved to New Britain.

Edw. Pierpont, a former jeweler of Naugatuck, but now residing in Phoenix, Ariz., is visiting his brother, W. E. Pierpont, a jeweler, with quarters in the Lilley Block, Naugatuck.

The name of Chas. Hyde, a foreman in the Wm. L. Gilbert Clock Co.'s factory, Winsted, is being prominently mentioned in connection with the Republican nomination for warden.

It is reported that several new buildings will be constructed in the block now occupied by Robert M. Mansfield, Wallingford. The building now occupied by the jeweler will be razed.

The Valentine-Linsley Silver Co. has changed its firm style to the Wallingford Co., Inc. The officers of the company are: C. W. Leavenworth, president; C. D. Morris, secretary and treasurer; Henry Norton, Jr., manager.

The Sessions Clock Co., Forestville, has purchased a piece of property on Main St., adjoining its factory on the west, and a brick shop will be erected for the black works now being manufactured on the opposite side of the street.

Edward E. Bacon, formerly superintendent of the Waterville Cutlery Co., and son of E. E. Bacon, at one time superintendent of the Waterbury Clock Co., died last Thursday at his home on George St., Waterville, aged 44 years.

Fritz Weber, Meriden, was among those who recently testified against one Thomas Matthews, who gave his residence as Boston, Mass., and who was charged with fraudulently representing the Catholic churches of Meriden, thereby obtaining money under false pretences.

Ambrosi Zoni, arrested last Wednesday in Bristol, accused of interfering with non-union men employed by the E. Ingraham Co., was arraigned in court the following morning and found guilty of a breach of the peace and of using abusive language. He was fined $3 and costs in each count.

The New England Watch Co., Waterbury, is about to place on the market a new size of watch. The company has not been making a gentlemen's watch under the 14 size, and now intends making a 12 size watch with the duplex escapement. The factory now has 600 employes on its pay roll, and, contrary to reports, will not dispense with any more of its help.

Antonio Rose, one of the strikers who was arrested last January for intimidating workmen employed by the International Silver Co., last week pleaded guilty in the Criminal Court of Common Pleas, Bridgeport, to the charge of breach of the peace, and was fined $50 and costs.

Last week a messenger from the International Silver Co. delivered at the home of Mrs. George R. Curtis, on Washington St., Meriden, a beautiful silver loving cup, the gift of the citizens of Meriden to the woman who presented the magnificent library to the town. The cup, designed by the International Silver Co., stands about 16 inches high on a base of polished ebony and is valued at $300.

Harrisburg, Pa.

Jeweler Harry Janowitz, Johnstown, has bought a lot in Chelsea, a suburb of Atlantic City, upon which he will build a cottage.

E. G. Hoover, who is superintendent of Memorial Lutheran Sunday School, was tendered a surprise party by members of the church and Sunday school at his home April 21.

Otto Plack, Jr., who went to South Africa a few years ago, was recently wedded in Cape Town, where he is now proprietor of a large jewelry store, and has started on a bridal trip to his parents in this city. They are expected here next month.

Last week two colored men visited the store of Wilhelm Plack, 119 S. 2d St., and asked to look at some rings. After examining a number they left, saying they would call again. Shortly after their departure Mr. Plack discovered that a paste stone had been substituted for a $40 ring. He notified the police. About 5 o'clock the men returned and asked to see the diamond rings again. Just as the men were about to change a ring a second time a policeman appeared at the door and the men attempted to escape. One of the pair, who gave his name as Walter Williams, was arrested and held for court. The stolen ring was not in his possession. His companion has not been apprehended as yet.

Lancaster, Pa.

J. Allen Kirk, Quarryville, Pa., visited the trade in Lancaster last week.

H. Z. Rhoads has sold his interest in the Lancaster Silver Plate Co. to A. Rosenstein, the president of the company.

Augustus Rhoads has returned from a trout fishing trip to the lower end of the county. He had the best catch in the party.

Charles A. Liebley, jewel setter at the Hamilton Watch Co.'s factory, was wedded last week to Miss Elsie Lulu Trout, of this city.

S. Kurtz Zook has added an optical department to his store at 101 N. Queen St. He has put an experienced optician in charge and is equipped to do all kinds of grinding for the trade.

Rotterdam: 2 packages cutlery, $400; 2 packages glass ware, $25.

Sheffield: 32 packages glass ware, $312.

Stockholm: 1 package cutlery, $63.

Tasmania: 1 case watches, $30.

Venezuela: 12 packages glass ware, $42; 8 packages cutlery, $136.

Denver.

Geo. V. Lippold has sold out his stock in his Larimer St. store, and will take a long rest before entering some other business.

H. W. Wyman, Colorado Springs, has gone to Hot Springs, Ark., to take treatment for rheumatism.

W. W. Hamilton, of W. W. Hamilton & Co., has been called to Pennsylvania owing to the illness of his brother, and in the meantime the suit between him and his former partner, Edward Lehman, has been postponed until his return.

Chas. B. Lewis, of the Lewis Jewelers' Supply Co., and former lieutenant in the First Colorado Volunteers, has gone to Colorado Springs to pay off the National Guard, which was recently on duty there on account of a strike. Mr. Lewis is acting in the capacity of expert assistant to the Inspector General.

S. P. Carlson, Jamestown, N. Y., whose stock was destroyed by fire last Winter, has reopened his store at 10 Main St. The new establishment has been considerably improved, and new mahogany cases and shelving have been installed.

HALL CLOCKS

We produce more Hall Clocks than any concern in the world. Our knowledge in the manufacture of Clocks comes from an experience of more than twenty-five years.

You can distinguish our cases by their originality of design and quality of construction and finish.

Our cases are fitted with only the highest-grade movements—striking and chiming, on gongs or tubes. We can fill your every requirement—our exceptional facilities enabling us to carry a great number of patterns which we offer at a wide range of prices.

We have no agents, and in buying from us you deal directly with the manufacturer.

Catalogues and price lists upon request.

Court Grants Patent To Inventor of Fastening for Initial Ring.

WASHINGTON, D. C., April 22.—An interesting decision relating to a patent on a device for fastening an initial upon a finger ring has been handed down by the Court of Appeals of the District of Columbia in the appeal of Max L. Weiss from a decision of the Commissioner of Patents rejecting his application. The rejection had been on the ground that the device was anticipated by two former patents, but the Court, after consideration of the case, holds that this is not so and that Mr. Weiss is entitled to the patent.

Mr. Weiss made several claims for his patent which is summed up by the Primary Examiner as follows:

The structure upon which these claims are drawn is a specific form of fastening employed in attaching "initials, emblems and other designs" to "finger-rings and other articles of jewelry." The ring has two or more holes each of which extends therethrough and is provided with an annular shoulder about midway of its depth. The initial, or other emblem, is provided with two or more studs or pins each of which terminates in an enlarged head, tapered so as to permit its ready insertion into its appropriate hole in the ring. Each of these studs is split and the stud back of the head is cut away to form a shoulder. The split in the stud permits it to be sprung into place, and the shoulder on the stud co-operates with the shoulder in the opening in the ring and prevents the withdrawal of the stud, and hence the removal of the initial without the special tool shown in Fig. 6.

The decision of the Court of Appeals, after quoting Mr. Weiss's claims and that of the Primary Examiner, reads as follows:

To this device the merit of patentable novelty was denied by each and all the tribunals of the Patent Office on the ground that it had been anticipated by a patent No. 467,928, for an improvement in finger-rings, issued to one Joseph H. Fink, under date of Feb. 2, 1892, and by a patent No. 528,196, for an improvement in signs, issued to one Clinton F. Webster under date of Oct. 30, 1894; and thereupon the Commissioner of Patents refused to grant a patent for the alleged invention. From such refusal the applicant has appealed to this court.

Notwithstanding the concurrent decisions of the tribunals of the Patent Office, it seems to us that the appellant's device is not without merit, and that he is entitled to a patent for it. The patent to Fink is no anticipation of it. The only thing common to the two is that both relate to finger-rings, and both have for their purpose the attachment of initials to such finger-rings. Fink's device is a combination of a box, convex shells, a perforated onyx, and an initial, all of which are necessary elements in the combination, according to his claim. The appellant omits the box and the onyx, and retains merely the convex shell or principal plate of the ring and the initial; and the method of attachment and detachment is different. This is sufficiently shown when it is stated that the initial may be removed from the onyx in Fink's method by inserting the blade of a knife between the two; while in the appellant's device a key is required. This result is due to the fact that in the former a bulged spring-head is used, and in the latter a square shoulder. We cannot hold that the substitution of a square shoulder for a rounded end of the stud is a mere mechanical expedient obvious to any skilled workman. It does not seem to have been obvious even to Fink, who was an inventor.

But it is argued that the expedient of the formation of shoulders within the holes in the band, which is the main element of the appellant's fastening device, is clearly suggested in the patent to Webster for securing letters to street-signs. Webster's patent is not in an analogous or correlated art; and we do not see that it would naturally have suggested the device of the appellant. A large wooden sign would not naturally be taken as a model for the construction of a delicate finger-ring. * * * *

We think that the decision of the Commissioner of Patents was erroneous and should be reversed; and that the appellant is entitled to a patent for his invention.

Opticians and jewelers handling optical goods will be pleased to learn that despite the bankruptcy proceedings against the Spencer Optical Mfg. Co., 15 Maiden Lane, New York, of which the trade learned with regret, the business of this company is still being continued and all orders for goods manufactured or carried by this concern will be filled as usual with promptness and dispatch. The proceedings, it is said, will make practically no difference to the customers of the company in regard to obtaining the goods which they have usually purchased from this house.

Reports by American Consuls on Silver Trade of Mexico and Denmark.

WASHINGTON, D. C., April 22.—Consul-General Barlow recently visited a number of the oldest dealers in the City of Mexico, and on his rounds was informed that there was no extensive market either for silverware or plated ware. No one ventured to estimate the amount of the consumption of the district, but stated that fully 75 per cent. of the plated ware came from the United States, the reason being given that the American goods came nearer meeting the demand of the trade. They are more attractive and novel in design, fully as durable, and may be sold at a slight reduction from the prices required for European goods. The solid silverware to a great extent is imported from Germany, both solid and plated ware, however, being imported to some extent from England and France.

Consul Freeman, at Copenhagen, has informed the State Department that some very fine silverware is produced by the Danish jewelers, the silverware of court jewelers like Michelsen and Christensen being famous over all Europe. Consul Freeman knows of no obstacles to the introduction of American goods. He believes that a fine display of American silverware in a prominent street of Copenhagen would undoubtedly promote a considerable demand. The tariff on solid silverware and plated ware is 8¼ cents per American pound. Silver in bars and old silver for manufacturing purposes are free of duty.

P. F. Darrigrand & Co., Utica, N. Y., are now located in their new store, 166 Genesee St., which was refitted for them in up-to-date style.

August Jacobs, Quincy, Ill., has been incapacitated from work in his watch repairing department by a serious injury to one of his fingers.

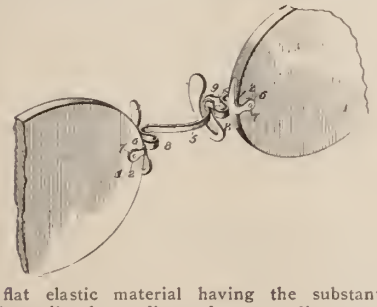
ISSUE OF APRIL 21 1903.

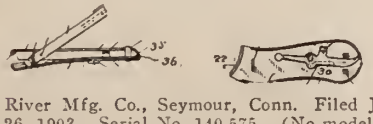
725,666. INDICATING DEVICE FOR MUSIC-BOXES. Gustav A. Brachhausen, Rahway, N. J., assignor to the Regina Music Box Co., Rahway, N. J. Filed June 27, 1902. Serial No. 113,420. (No model.)

In a music-box, a traveling note-sheet carriage, an indicator-frame connected with the carriage so as to move therewith, an indicator movable on said frame, and operating means attached to the indicator and also attached to a stationary part, so as to cause the indicator to shift as the carriage is moved.



725,686. METALLIC BELT. William J. Egan, Milwaukee, Wis., assignor to Edmund Burke, Milwaukee, Wis. Filed July 7, 1902. Serial No. 114,553. (Model.)

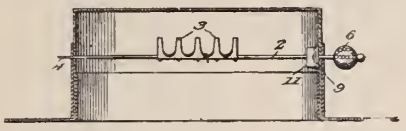
A series of integrally-connected belt-links, comprising a flattened metallic coil, and having each link flattened transversely on the side of pulley contact.



725,910. EYEGLASSES. Leo F. Adt, Troy, N. Y. Filed Dec. 6, 1901. Serial No. 84,861. (No model.)

In eyeglasses, the combination with the lenses and nose guards connected thereto, of the spring

of flat elastic material having the substantially horizontally forwardly and rearwardly extending open loops between its central portion and the attaching ends, said loops being formed by bending the flat spring material laterally of its edges.



725,946. FINGER-NAIL CLIPPER. John C. Ernst, Ansonia, Conn., assignor to the Little

River Mfg. Co., Seymour, Conn. Filed Jan. 26, 1903. Serial No. 140,575. (No model.)

A finger-nail clipper comprising members provided with cutting-jaws, an operating-lever pivoted to one of said members and engaging the other member, and a slide provided with a nail-cleaner and having a catch for retaining the operating-lever in the closed position.

726,154. HAT-FASTENER. Theodore Fries, Lyons, N. Y., assignor of one-half to Alexander H. Towar, Lyons, N. Y. Filed Aug.

16, 1902. Serial No. 119,879. (No model.)

The combination with a hat, of a rotatable pin having curved teeth, a casing secured to the inner side of the hat through which the said pin rotatably projects, a disk and sleeve fast on the pin within the casing, the disk having a peripheral slot, a stop pin for engagement with the opposite end walls of the slot, and a spring surrounding the sleeve and having its opposite extremities bearing against the disk and the inner wall of the casing.

Design **36,292.** HANDLE FOR SPOONS, FORKS, OR SIMILAR ARTICLES. Sid-

ney A. Keller, New York, N. Y., assignor to R. Blackinton & Co., North Attleboro, Mass. Filed March 28, 1903. Serial No. 150,068. Term of patent 7 years.

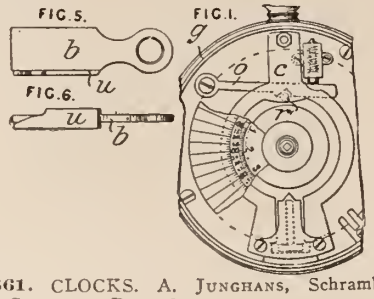
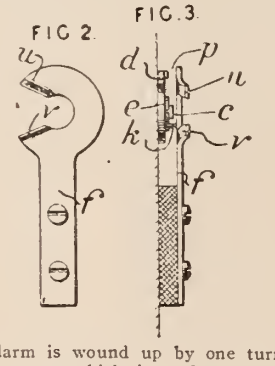
the seconds-hand when traveling, for instance, at 10 miles an hour, while, if the dial gains on the hand, the speed of travel will be greater by the distance between 0 and the figure with which the hand coincides at the end of one revolution after coincidence with zero. The gearing between the traveling wheel and the dial is as follows: The dial is attached to a worm pinion *d*, the worm *e* of which is mounted in a cock *h* and ends at the band of the watch in a key harrel *f*. An eccentric *v* on the axle of the traveling wheel operates a lever *t*, which hy a cord *n* and plunger *o* with spring *p* is connected to a ratchet lever *k* that drives a ratchet pinion *i*. The spindle of the pinion is squared to fit the key barrel of the worm spindle when the watch is placed on a clipping-bracket *s*.



25,629. PADLOCKS OF JEWELRY. Payton, Pepper & Sons, and J. W. Robathan, 3 Vyse St., Birmingham. Dec. 16.

The bow *a* of a padlock for jewelry is secured to a spring-returned lever *d*, and passed through a short tube or shaft *c*, and provided with a projection *b* adapted to engage a slot in the case, so that it can be drawn out and rotated.



25,979. TELL-TALE CLOCKS. J. Schlenker, Schwenningen, Wurttemburg, Germany. Dec. 19.

A rotating card-dial, applied to a clock or watch movement in a case *g*, is marked hy the use of type keys *b*, which are thrust through a slot behind, and press against type matrices in a plate on a hanger *c* in front of the dial. There are two or more vertical rows of matrices, and the keys are formed with cam hases *u* to set the hanger to the right or left, so that the type registers with its matrix. A detent *o* is applied to a stud *r* on the hanger.

25,861. CLOCKS. A. Junghans, Schramberg, Germany. Dec. 18.

Illuminated Clocks; Alarms.—A light is given while the alarm is sounding. The driving-spring

of the alarm is wound up by one turn of a key square *c*, upon which is a finger *d* to strike a stop pin *p*, both in the winding up and the running down. The circuit of an electric lamp is completed while a pin *k* on the disc *e* of the finger is rubbing an incomplete flat ring *u*, *v* fixed hy a stem *f*.

Complete specifications accepted April 1, 1903. 1902.

Retail Jewelers' Advertising.

[The use of this department is open to every retail jeweler and optician. Forward for criticism your newspaper ads., booklets, catalogues, novelties, circulars, etc. Ask advice and offer suggestions. Replies in these columns are unbiased. Make letters as full and particular as you desire. Every letter and ad. sent will receive full attention, though the publication of the matter may sometimes be delayed several weeks. Address all letters and other matters to THE JEWELERS' CIRCULAR PUB. CO., 11 John St., cor. Broadway, New York.]

Commencement Season Advertising.

WITH the approach of the annual commencement season will be heard that oft-repeated complaint, "I don't know what to give." And as it is not an easy matter to decide what one should give, most persons appeal to others for suggestions. Even then they are undecided as to what they shall purchase, for folks are so indefinite when giving advice that it often does not amount to much.

No one is better qualified to offer suggestions to the graduating gift buyer than the jeweler, because his stock is replete with suitable articles that are always acceptable. But with his great advantage of desirable articles and past experience the average jeweler is slow to make the most of his opportunity to offer suggestions to the buying public. These suggestions—examples of which we give herewith—in the best newspapers the community affords, will be greatly to the advantage of the jeweler making them.

Watches.

The commencement season finds us fully prepared to meet all demands for watches of the best American makers.

Elgin, Waltham and New England watches are famed for their perfect construction, and accurate timekeeping. These movements in the fashionable thin cases form a desirable collection from which a very acceptable gift can be chosen. Prices, $5.00 to $40.

J. B. SAMSON,
322 E. Orange St.

Gauze Fans

For Graduates,
For Weddings.

White gauze fans, neatly tinted and spangled, 75 cts. to $1.00.

Spangled gauze fans, white and tinted, with a deep lace edge and decorated sticks, 90 cts. and up.

Fine hand-painted and spangled fans with applied lace and ivory sticks, $3.50 to $5.00.

Black gauze fans, plain or overlaid with lace, and beautifully spangled, 75 cts. to $5.00.

J. B. SAMSON,
322 E. Orange St.

Gifts for the Boy Graduate.

Every year one is undecided what to give a boy or young man for a graduating gift. Here's a list of suitable articles that will suit almost any purse and any one of which will be appreciated:

A scarf pin, costing from 50 cents to $10.

A pair of cuff links, 75 cents to $15.

A dainty fob, costing anywhere from $2 to $10.

A pocket knife is very acceptable and a good one can be obtained as low as $1.50. Better ones range in price from $1.50 to $15.

A gold or silver pencil, from $1.25 to $20.

Vest chains, at any price from $2.50 up.

A beautifully chased match safe will please any boy, $1.25 to $15.

A key ring and chain, in silver or gold plate, can be had as low as $1.50.

A set of neat studs, anywhere from $2 up.

A fountain pen, costing from $1 to $2.50.

A signet ring engraved with his monogram, $4.50 to $15.

A watch is always acceptable and can be had in all styles of cases and at a great range of prices—$5 for a good timekeeper in a silveroid case to $40 for a splendid timepiece in a 14-k. gold case.

J. B. SAMPSON,
322 East Orange Street.

What To Do With a New Idea.

IF an original idea comes to you, do not measure it by your estimate of the efforts of your competitors, to test its worth. Don't be afraid of it because it is unlike all the other ideas being carried out in your line of business. Its very newness is a big argument in its favor because new things attract attention. If it has real merit, launch it. You will soon be convinced of its effectiveness, probably, by its being copied by all the others.—*Business Problems.*

In an action for the price of goods sold, the purchaser may counter claim a loss resulting to him from a breach of covenant by the seller not to manufacture or sell articles of the same character to anyone else. (69 N. Y. S. Rep. 749.)

WHAT SOME JEWELERS SAY.

A good watch is a joy forever. Ours are both good and beautiful. Our special movements are very accurate and the price way down.—H. M. Stilson, Pittsfield, Mass.

Watches need attention—all machinery does. And the better the watch, the more particular its owner should be. We have the best workmen we know of, and, of course, our work is guaranteed. Try us just once. We will prove our assertion.—T. McNamee, Wheeling, W. Va.

Gifts for the Girl Graduate.

You want to give her something, of course, but unless somebody helps you a bit you despair of choosing the right thing. Any one of these would be sure to please her, and be perfectly correct for the occasion:

A fan costing anywhere from 50 cents to $50.

A fan chain of imitation pearls, costing from 75 cents to $6.

A hand-painted shirtwaist set, to be had for $1.50 to $3.

A hat pin set with turquoise or baroque pearls, from $3 to $10.

A pretty brooch, at any conceivable price from $1 up.

A bracelet, anywhere above $3.

A lorgnette chain for just as much as you want to pay, beginning at $5.

A ring, all along the scale from $2 to $200.

An inkstand, 25 cents to $12.

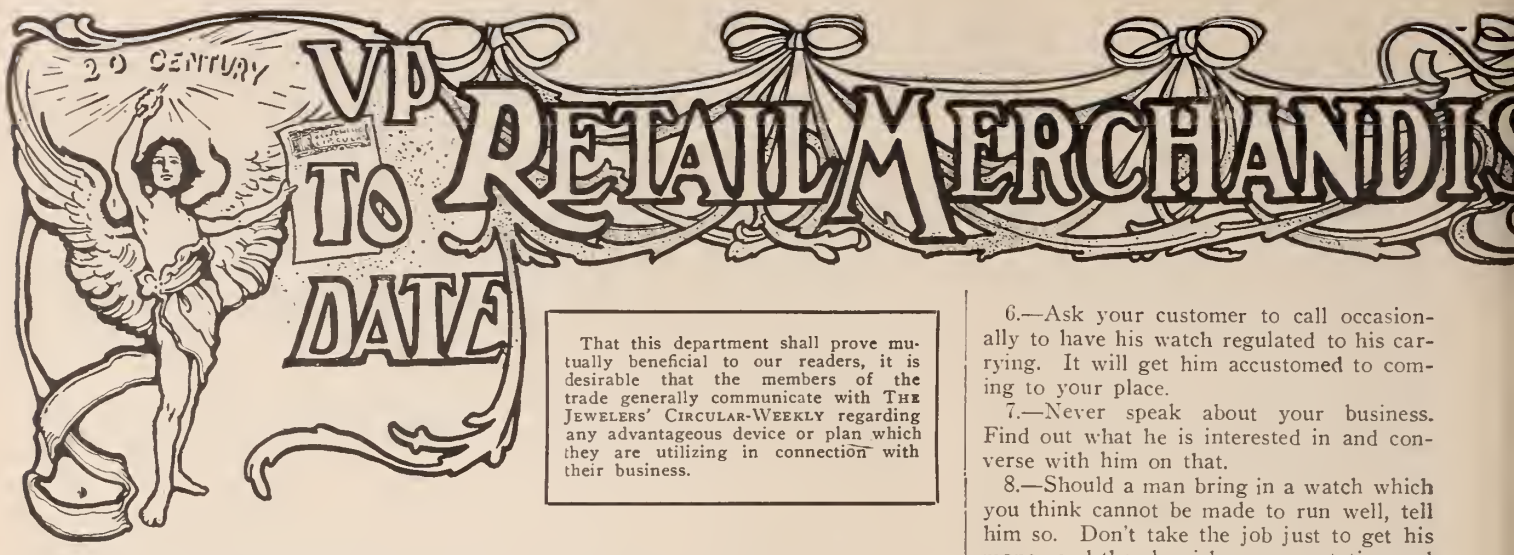
A clock for her desk, $2.50 to $10.

A sealing set, $1.20 to $3.25.

Anything at all for her dainty desk, including gold pencils, pen trays, blotters, pen racks, paper weights and letter clips, from 25 cents to $10.

An enameled chatelaine watch, at from $5 to $15; or a silver watch, for equal price; or a gold one beginning as low as $8. Tiny affairs, no bigger than a 5-cent piece, some of them, but guaranteed timekeepers.

Chatelaine pins, belt clasps, sash pins, in gold, silver or hand-painted porcelain, costing from 50 cents to $9.



A chatelaine or wrist bag or a purse, beginning at $1 and running up to $30.

J. B. SAMPSON,
322 East Orange Street.

A child could purchase a diamond from us just as reasonable as an expert buyer. Our prices are in plain figures, and are made after careful study and consistent with sound business. Every stone sold is guaranteed exactly as represented or money refunded.—Julius C. Walk & Son, Indianapolis, Ind.

Those cheap watch cases you sent away for are beginning to show the brass and you are beginning to realize that they are not so cheap as you at first supposed. Hadn't you better call in and look over our line of good cases that are guaranteed by both seller and maker?—L. M. Lowenthal, Mt. Ayr, Ia.

Your employer expects you to be on time. Do not risk being late for the want of an alarm clock when you can get them here for the small sum of $1. Fully guaranteed. Our $1.50 alarm clock, with double bells and seven minute alarm, with shutoff, is a winner.—Frank W. Hayes, Montoursville, Pa.

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan which they are utilizing in connection with their business.

PRIZE ESSAY COMPETITION, NO. 10.

SUBJECT:

"How to Develop a Watch and Watch-Repairing Department."

I OFFER the following suggestions, some of which I give my reasons for making. The others, being too well known to require an explanation, will all have a tendency toward developing a watch and watch repairing department, and if closely followed should make a very successful one.

1.—Always have your store and windows clean.

2.—Have your store well lighted.

3.—Have a large and well selected stock. Don't make your customer wait until you send out for goods on memorandum. His time is valuable.

4.—Keep your stock clean and bright, with clean tags and in clean trays.

5.—Employ clerks who are neat and courteous and well versed in watches.

6.—Don't send out a watch unless you are sure it is in perfect order.

7.—Give a box and chamois bag with each watch; they will not cost you much and will show the goods off to great advantage. People expect a box and are disappointed if they do not receive one. Some people do not like to ask for a box, so when they purchase another watch they will go where they will receive a box with it.

8.—Instruct your customer to return the watch to you if it does not run satisfactorily with the promise that you will change the movement. It will pay you to do this.

9.—When you change a movement, do not put in stock the one you take back until it has been repaired.

10.—Should your customer want the watch engraved, give it only to a good engraver.

11.—Have your clerks read all articles touching on your business such as will be found in CIRCULAR-WEEKLY and other trade papers, that they may keep up to date.

12.—Always have an article ready when promised. Should some accident occur which will make it impossible to have it finished at the time promised, notify your customer, telling him when he can have it. It will save him an unnecessary journey to your office.

For the watch repairing department the following hints are given:

1.—Employ only first-class workmen.

2.—Don't promise a watch too soon; ask your customer to let you keep it long enough to regulate—about a week or 10 days.

3.—Always return a broken piece.

4.—Don't use cheap material.

5.—Charge a fair price for your work. Don't cheat your customer or yourself.

6.—Ask your customer to call occasionally to have his watch regulated to his carrying. It will get him accustomed to coming to your place.

7.—Never speak about your business. Find out what he is interested in and converse with him on that.

8.—Should a man bring in a watch which you think cannot be made to run well, tell him so. Don't take the job just to get his money and thereby risk your reputation and the loss of his patronage. Give him your honest opinion, and should he still desire to have it repaired, tell him you will do your best.

9.—Give brass or nickel checks with your name, address and the number of the job on them. It will help your customer to remember where you are located so he can send others to you.

10.—Be frank and honest in all your dealings.

By following the above suggestions, none of which will add any expense to your business, you will have a satisfied customer, which is the best and cheapest advertisement. J. W. H.

Prize Essay Competition—No. 11.

Three prizes, $20, $10 and $5, will be given to writers of essays on the subject:

"How a Jeweler Can Profitably Conduct a Camera Department."

The prizes will be awarded to the writers of the best and most reasonable essays. The ideas expressed, rather than the language used, will be considered in making the awards. The essays will be lettered when received and the judges will not know the identity of the writers until after the decisions have been made.

At the request of several contestants in this competition who were obliged to abandon their writing during the Easter season, an extension will be given until to-day, when the contest will close. Write plainly and legibly and on one side of the paper only.

The right is reserved to publish any or all of the essays received. Only those connected with the trade are allowed to enter this competition.

Useful Hints to the Jeweler on Store-lighting.

THE jeweler, above all other storekeepers, should be particularly solicitous about the lighting of his store and show windows, for on the proper arrangement of his lighting appliances largely depend the attractiveness and consequent efficacy of the display. Every jeweler knows the influence of certain kinds of light on diamonds and other precious stones, hence the necessity of a well lighted interior.

At the present time there is hardly any excuse for a poorly lighted store. Country dealers who do not enjoy the advantages of the electric light can find a fair substitute for the same in the use of gasoline. Some interesting hints on the use of this latter were published in a recent issue of the *Show Window*, which says:

Gas, electric and gasoline gas lamps are the three lights that we have to-day; kerosene, for various reasons to all well known, being no longer considered. Of these three, the gasoline gas lamp is by far the most economical, costing about one-tenth as much as either gas or electricity. For this reason alone, if for none other, they are to-day largely used in cities where both gas and electric light are to be obtained, while for the village store they are the indispensable light, and we now have the store in the country as well lighted as is that of the fashionable shopping places of our large cities.

Wonderful progress has been made in the perfection of this gas lamp, both as regards the light itself, its practical construction and simplicity. The light produced is superior to gas or electricity, one gas lamp giving as much light as several

NG and HINTS to JEWELERS

incandescent lights. It is always reliable, having no electric lighting plant to be dependent upon, no wires to be disarranged and no coal supply or shortage to be considered. Gasoline lamps met on the start with the same objection as the electric arc lamps, too strong a light in one spot, with the consequent objectionable glare and shadows. This is now overcome in the single or double burner lamps of 100 candle power, which can be distributed about the store where the light is most needed, and can be changed from place to place wherever required.

Various "systems," as they are called, of gasoline lighting have been used. System where the tank containing the gasoline is located in the basement, in the rear of store, or outside the building, and the lamps supplied through pipes or hollow wire; but these have not met with the success anticipated. It often happens that some disarrangement of one of the lamps or a leak in the pipe or wire puts the whole arrangement out and the store in darkness.

But positive success always follows the introduction and use of a number of the regular single or double gravity 100 candle power gasoline lamps, and enough of them to produce the required light; then each lamp is dependent only on itself. It, in fact, is a lighting plant in itself; the extra trouble of filling is but slight compared with the satisfaction of always having in the store and show windows a beautiful white light, clear, strong and steady, always to be depended upon, with no dark shadows and no dark spots, but an artificial light that for many places is superior to daylight for the display of certain kinds of merchandise.

Various makes of this class of lamp have been on the market; the legitimate makers have been more or less hindered by unscrupulous persons, who have imposed upon the public with some worthless articles in this line, but they are now about weeded out. Two styles of lamps are being made, one is what is known as the under generator—that is, where the burner is first heated from below; but the better, and, in fact, the really reliable lamp is the kind in which the gas is generated from above the chimney.

It is always reliable, always generates, has no complicated burner to get out of order, is constructed on scientific principles, is safe, gives the best light, and, while it costs a little more, is still the cheapest, owing to the years of service it will render. In buying lamps it is always well to choose those that are permitted by the National Board of Underwriters and will not affect the insurance rates, which is a matter of great importance to the storekeeper.

The dark, dreary store can no longer compete with its well lighted neighbor. It is an established fact that the light store gets the trade on the dark day, is much more inviting to the evening buyer, and has that indication of prosperity and progress which nothing gives to a place of business more thoroughly than good light.

Discretion in Replenishing Stock.

WHEN purchasing stock it is advisable for the buyer to get the opinion of the salespeople as to what particular articles to select. To get the opinion of a reliable man whose business transactions cover a territory as large as the United States on any subject with which he is familiar, and in particular the line of business which he follows and in which he has the opportunity of making comparisons, etc., on a much larger scale than your own, is an opportunity for acquiring valuable information which we cannot afford to overlook.

Unless a western merchant travels across the Continent about three times a year and the eastern merchant makes about the same number of trips to Europe, it is quite impossible to keep in touch with the latest and best in the business without consulting the man who is better posted than yourself.

Each particle of knowledge thus gained gives you more material for conversation with your customer, and you can make a more authoritative statement. The advantages of the old sayings, "Two heads are better than one," and "Knowledge is power" were never more apparent.

Remember that the advice and suggestions of this man (whose interests are really yours) cost you nothing. Do not accept it as proof positive, but get all the opinions you can and then, with the judgment of a Solomon, combat them with your own and keep the result to yourself.

Among the noteworthy advertising cards executed by the retail jewelers during the Easter season was a series of handsome lithographs issued by Fred J. Reith, 467 Eighth Ave., New York. The series consisted of seven different designs, the motif of each being cute little Easter chicklings depicted in various ways, surrounded by flowers printed in their natural tints. One design which was particularly striking showed an ornate wheelbarrow filled with seven tiny chicks nestling together in a bed of violets and lilies of the valley, while two of their unfledged companions stand outside, denied admission to the floral nest. The advertising is printed in blue beneath the design and by no means detracts from the appearance of the card.

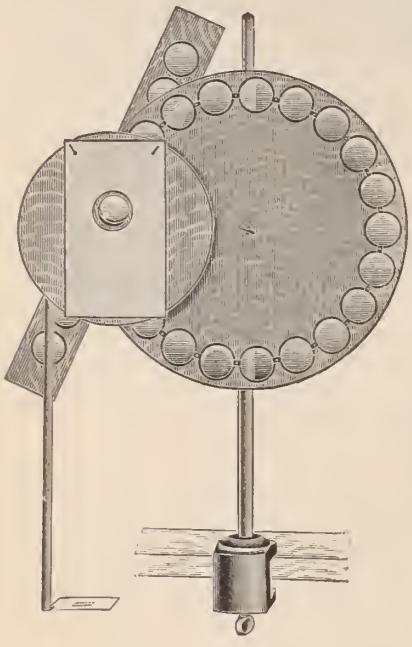
Ideas and Schemes.

WHEN C. H. Harris, Portsmouth, O., moved into his new store he had an opening exclusively for the boys and girls. This is a new idea, as it has been customary on occasions of this kind to leave out the girls and boys. Mr. Harris evidently believes the friendship and patronage of the girls and boys valuable to him as well as the good will of the older persons.

J. R. Boynton, Altamont, N. Y., is displaying a pewter tea plate which came over in the ship *Mayflower* in the year 1620. It belonged to Elder William Brewster. The mother of Mr. Boynton was a niece of Dr. Joseph Brewster, a descendant of Elder Brewster, and the plate was handed down from family to family, and after the death of Mrs. Boynton it came into his possession. On the reverse side it has the English coat-of-arms.

Ryrie Bros., Toronto, Ont., made a special Easter display, their establishment having been elaborately decorated with streamers of southern smilax, potted palms and Easter lilies, miniature orange trees and large bells and anchors of immortelles. Purple and white decorations predominated, producing a fairy-like effect. The window decorations were unique and very tasteful, the central piece being a perfect imitation of a church pipe organ built of fine stationery and writing material. Another window showed an enormous egg with golden cherubs supporting tiny shelves on which were displayed choice articles of silver and china. A splendid assortment of jewelry, novelties and art goods specially purchased for the Easter trade was in evidence.

Mrs. M. E. Bugbee & Co., Gonzales, Tex., recently pleased the horse fanciers by having a pair of sterling silver spurs manufactured and raffled. The spurs were valued at $100 and were won by J. Pouncey, Zint, Tex.



Fritz Abendroth, Portland, Ore., brought out a clever way of advertising when he offered a solid gold minute repeater and chronograph for sale at $200, with a reduction of $1 each day until sold. When the price reached $151 the instrument was purchased.

In one of the show windows of the Nathan-Dohrmann Co., San Francisco, Cal., a novel line of engraved pictures, suitable for toasts or booby prizes, is being shown.

Where parties have a running account between them and a settlement is fairly made, at which all the items entering into it are fully considered by both the parties, so far as the items of the account named therein are concerned, both parties are concluded by the settlement. (98 Ill. App. 262.)

THE ONLY ACCURATE EYE TESTER IS THE

"Monitor Eye Refractor"

Invented and Manufactured by
A. REINHARD & CO., Milwaukee, Wis.

Will test and correct all errors of refraction quicker and more accurately than any high-priced instrument of European or American make (10 average cases in less than 1 hour, or from 2 to 10 minutes each per case accurately tested) all with far better and more positive results than the trial case alone can do or the trial case and any high-priced instrument combined. It takes the place of most of the trial lenses and entirely dispenses with the heavy trial frame, which causes in most cases a nervous strain on the optic nerve of the patient. To the busy optician it is a time saver, saving from two-thirds to nine-tenths of the time. To the practical optician it is very indispensable, as an addition to the trial case. To the beginner it is certainly quite an advantage, as it is easy to learn and easier to operate, with "No guess work," but positive and quick results are obtained. It is scientific, being based on the 20-foot distant test. It can be used for the 10 or 15 feet test as well. It is the handiest skiascope in existence. It is also excellent in its application if used by the fogging method. It is neat and durable as well as antiseptic. (No danger of patient coming in contact with former patient's chin or head rest.) It is cheap, being from two-thirds to three-fourths less in price than any instrument now on the market.

"To save time is to lengthen life." The rapidity of the method of testing by the "Monitor Eye Refractor" prevents fatigue both to patient and operator. No questions need be asked the patient except where letters can be seen on the test cards both distant and reading, or how the lines look on the astigmatic circle.

PRICE, $25.00.

ORDER FROM

SWARTCHILD & CO., Chicago, Ill.

A BOOK OF DIRECTIONS ACCOMPANIES EACH INSTRUMENT.

CHICAGO, April 17th, 1903.

To Whom it May Concern:

We have thoroughly and critically examined the "Monitor" Eye Refractor invented by A. Reinhard of Milwaukee, and find it quick and accurate in its results, with an enormous saving of time and patience both to the operator and patient. We, therefore, recommend it to all opticians, and particularly to beginners, as an indispensable addition to the trial case, believing it will give entire satisfaction to those interested.

Resume of Prof. Fox's Lecture Upon Refraction.

BY E. LE ROY RYER.

BEFORE the April meeting of the Optical Society of the City of New York Prof. Wm. Fox delivered a very interesting and instructive lecture upon "Refraction." Assuming the refractive index of glass to be 1.5, he demonstrated (1) that rays of light passing through a glass prism are bent toward the base of said prism; (2) the image from which such rays emanate appears, when looked at through the prism, displaced toward the apex; (3) should the incident ray strike the prism at right angles to the surface nearest the object the angle of refraction will equal one-half the angle of the prism (*i. e.*, should a 20° prism be used the angle of refraction would be 10°); (4) the

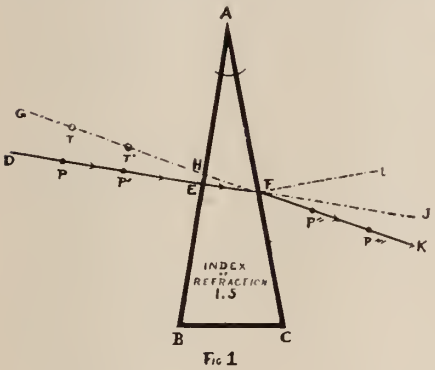

Fig 1

prism will cause the least deviation when the incident ray strikes the prism in the manner just mentioned; (5) should the incident ray strike the prism obliquely the angle of refraction will be greater than half the prism value; (6) the greater the obliquity at which the incident ray strikes, the greater will be the angle of refraction; (7) the ray may be bent only once, when the bending will be toward the base; (8) or twice, both times toward the thicker part of medium, or once toward the thicker and once toward thinner (thicker part greater).

The foregoing facts were demonstrated in the following way:

Case I.—Wherein is to be proven that a ray of light in passing through a prism is bent toward the perpendicular or which amounts to the same, toward the base.

A 20° prism (or any degree prism) was placed upon a sheet of paper and around its edges were drawn the lines *a b*, *b c*, and C A (Fig. 1), marking its boundary. At P P′ were stuck, uprightly, two pins on A B side of prism; with eye on opposite side, pin P″ was placed in line with P P′, which, however, appear at T T′; then P P′ and P″ were sighted and the pin P‴ was placed also in line. Prism is then removed, likewise pins, and lines D E and F K drawn, connecting holes made by pins.

Thus is shown that the ray of light represented by D E is, upon emerging from the

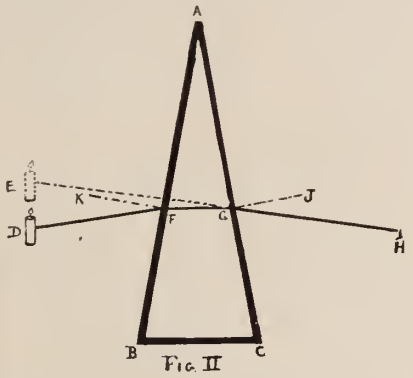

Fig. II

prism, given a new direction along F K and tending toward the base.

Case II.—Wherein is to be shown that the image from which such rays emanate appears, when looked at through the prism, displaced toward the apex. In Fig. 2 A B C represents prism. Holding a candle at D and having the eye situated at H, it can be readily seen that the candle H will no longer be seen, but an image of it instead, at E. An understanding of the principles of refraction shown in Fig. 1 will allow of this displacement being easily accounted for.

Case III.—Wherein it is to be proven that should the incident ray strike the prism at right angles to its surface the angle of

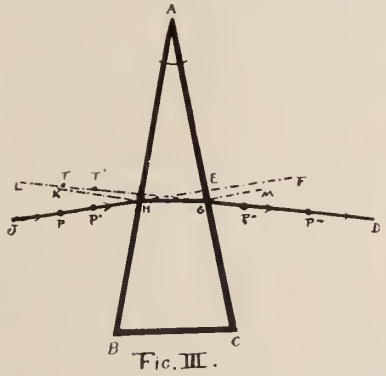

Fig. III.

refraction will equal one-half the refracting angle of the prism. Referring to Fig. 1, the ray D E will be seen to strike the surface of prism in the above-mentioned manner—that is, at right angles to it. In this case the incident ray passes onward to F, unchanged in direction, but at F it is bent, taking the direction F K. Prolong line D E to J; then measure with your protractor the angles J F K and B A C. It will be found that the former, which is the angle of refraction, equals 10°, while the latter, the refracting angle of the prism, equals 20° or twice the former.

Cases IV., V. and VI.—Wherein is to be shown that when the incident ray strikes the prism at right angles to its surface the least deviation is effected, and as the obliquity at which the ray strikes increases, so does the deviation. The angle of refraction will also be greater than half the refracting angle of the prism in all cases but the former.

These three cases can be treated together. Referring to Fig. III. it will be noted that the pins P P′ were so placed as not to be perpendicular, or at right angles, to the side A B of prism. Then with the eye at D, P P′ were sighted and P″ P‴ were placed in line with them as they appeared at T T′ through prism. The points P P′ and P″ P″ are connected, giving respectively the lines

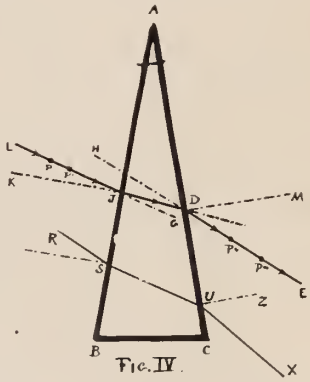

Fig. IV.

J H and G D. From G is erected the lines G M, perpendicular to side of prism, A C. The angle of refraction in this case is M G D, which, if measured, will be found to equal more than half of the refracting angle, B A C, of the prism.

In the same manner we may construct Fig. 4, showing incident ray L J striking surface of prism in an oblique manner; measuring the angle of refraction M D E, it will be found to be greater than one-half the angle B A C. In Fig. 4 let R S represent incident ray striking at greater obliquity than does L J (also Fig. 4); then following the course of the ray through the prism to U and so on to X, and measuring the angle of refraction, Z U X, it will be found that this angle is not only greater than one-half the angle B A C, but greater than the angle M D E, showing (Case VI.) that the greater the obliquity at which the incident ray strikes the surface the greater will be the angle of reflection.

Case VII.—Wherein is to be shown that a ray in passing through and out of a prism may be bent only once, when the bending will be toward the base. By placing pins at P P′ (Fig. 1) in a line perpendicular to

Optical Department.

the surface A B, it will be found that the ray emerges at F, and F will be found to be in a direct line with D E, which goes to show that the ray is not refracted until it emerges at F and then toward the base.

Case VIII.—Wherein is to be shown that a ray may be bent twice, both times toward the thicker part, or once toward the thinner and once toward the thicker part (thicker part greater). When the incident ray comes from the side of perpendicular toward the base as from J (Fig. 3), the ray will be found to be bent at H toward G, which is toward the base, and again on emerging at G toward D, which is also toward base. When the incident ray comes from side of the perpendicular toward the apex as from L (Fig. 4), the ray will be found to be bent once toward the thinner part, or apex, as toward D, and once from D toward the thicker part to E.

To describe these experiments upon paper detracts greatly from their value and attractiveness, and the apparatus needed being so simple and the results of so much use and being within the reach of all, it behooves all therefore to perform them for their own benefit.

State Affiliation.

(Address of Secretary Edw. L. Jones, Sandusky, O., before the meeting of the Ohio Optical Association, April 13, 1903.)

Mr. President and Fellow-Opticians:

The remaining years of the last century have certainly been such as the optical profession can look back upon with a great deal of pride for the rapid advancement which has been made in the profession. Through the general prosperity of the country we have been enabled to accomplish much good, and the same with organization, either National, State or local; with very few exceptions they are all on a progressive basis.

The year past has witnessed a growing interest in the organization of State societies. Indiana has made a record for herself. Also the States of Wisconsin, New York, Illinois, etc., and an encouraging report has come in from the State of New Jersey, having organized a society with 50 charter members.

The awakening of the interest of the opticians to the need of stronger organizations is certainly one of the most pleasing conditions that have come about, and is a great cause for gratification to all members of the craft. This sentiment is growing, and that it will continue steadily to grow is very certain, with the result that every State in the Union will have an organization or society which, eventually, will federate itself with the parent body—the American Association of Opticians.

By so doing, there will be uniformity of laws and regulations, which would be used universally throughout the United States. It is only by building our societies upon strong and right principles, and by our united efforts to uphold these principles, that we can hope to obtain the highest results.

What seems to me a very important result in connection with our future outlook is the strength of our organization.

That the organization of any class working together under competent leaders can accomplish the result desired has been demonstrated to be a fact beyond the possibility of a doubt. I believe that by strictly scientific work and a thorough knowledge of every detail of our profession we will be able to win prestige and respect, and aided in securing favorable legislation. For, as soon as the majority of the State societies have affiliated, then the recognition of the profession of optometry by the general public will be accomplished and our chosen profession will stand second to none among the learned callings.

What has caused the rapid advancement of the profession of optometry to-day? It is due to education and organization. It should be our aim to advance our profession sufficiently to place it in the foremost ranks of the leading professions. The time is not far distant when we shall see chairs established in all our State universities for thorough instruction in optometry, and it should be our duty to demand the establishment of such chairs.

It is now time to turn from the view of the past, and to face the 20th century, and to plan and to work for the accomplishment of still better conditions. Affiliation should be the watchword of every State society for the year to come, and others to follow, for by so doing we can accomplish much good and will make our success assured.

To those present I must say that sooner or later this affiliation must take place between State and National, in order to have the parent body become the representative association of all the refractionists of the country. The object of the parent body shall be to federate into one organization all branches of the optical profession of the United States and Canada, for the purpose of fostering the growth and diffusion of optical knowledge; for promoting friendly intercourse among opticians; for safeguarding the material interests of the optical profession; for elevating the standard of optical education; for assisting in securing the enactment and enforcement of optical legislation and enlightening and directing public opinion in regard to the problem of optometrical science.

I wish to take up your time a little longer by reading a circular which has been sent out to all State societies for the purpose of having them affiliate with the American Association of Opticians, and I hope that you will decide to act to the best of your ability for the good of the society and our profession:

To the Officers and Members of the State Optical Societies:

Gentlemen—In answer to the many inquiries made of the officers of the American Association of Opticians, as to the correct interpretation and working of Section 4 of the new by-laws of said association, referring to the dues and fees of affiliating societies, the board of directors have authorized the following circular, to wit:

That any State optical society or association affiliating with the American Association, shall pay to the said association one dollar ($1.00) for each member of said State society or association in good standing at the time said affiliation is made. The said State society or association shall be credited with two dollars ($2.00) for each of its members who are members in good standing and have paid the annual dues for the current year in the American Association at the time of affiliation.

The one dollar per capita affiliation fee includes the dues for the current fiscal year, which ends Oct. 1.

It is hoped that the full import of the affiliating plan, which was adopted by the association at the Boston Convention, will be apparent to all the members of the optical organization, and that your society will be among the affiliating bodies with official representation in the House of Delegates, at the Atlantic City Convention during the coming Summer.

The object of uniting the optical organizations into one solid body is, that we may better individualize our profession, enforcing a higher standard of optical education among the members of the calling and to establish our position in the public's eye as well as the favorable influence it will have upon public sentiment. Let us all join hands and forces and come together at Atlantic City in good round numbers. Respectfully yours,

Ed. L. Jones, Secretary.

Eyeglasses a Remedy for Numerous Functional Disorders.

Will glasses that correct defective vision cure nervous headache, indigestion, insomnia and an irritable disposition? Will they reach other functional disorders of an even graver character? A bright exchange devoted to hygiene believes they will, and says:

The presence of eyeglasses upon so many faces, old and young, naturally creates apprehension regarding the possible effect of modern life and its commercial and professional demands upon the human eye. To see so many "spectacled" faces, particularly among those who are not addicted to literary habit or studious research, naturally creates the impression that the human eye is deteriorating under the uses to which modern conditions have subjected it. With the whole firmament of business scintillating with millions of electric stars it is small wonder if the human eye shows signs of failing power or focalization.

As a matter of fact, however, the spread of the spectacle habit cannot be ascribed entirely to defective vision. It would surprise many who do not wear glasses to know how many who wear them can see just as well without them. Then why suffer the auricular appendages to be hooked with gold bows or the olfactory organ to be burdened with the weight of artificial lenses?

The answer is one that concerns the delicate relation of the optic nerve to the entire nervous organism. Twenty years ago the doctor who claimed to cure dyspepsia or nervous headache by fitting glasses to the eyes was regarded as a quack. He was put in the category with clairvoyants and faith healers. But we have made great strides in the pathology of the nervous system.

It is now perfectly clear that a faulty curvature of the cornea, producing astigmatism, would cause such a strain upon the optic nerve as to disturb the entire nervous system, interfering not only with digestion, but with every other function that is dependent upon normal and healthy nerves. When the rays of light do not converge upon the retina, as in astigmatism, the effort to make them converge normally is often productive of the most serious functional disorders.

Nervous disturbance is also caused by the effort of the weak muscles which control the crystalline lens of the eye to focalize the rays of light from objects. As the office of the optic nerve is to transmit the images to the brain a continuous strain of

Optical Department.

this kind will produce headache, indigestion, insomnia, nervousness and great irritability of temper.

The conclusion of all this is: If you suffer with any of these ailments have your eyes examined by a competent eye-specialist before you begin to load your poor nerve-weary stomach with medicines.

If the husband is fretful, grumpy, garrulous, peevish or quarrelsome, try glasses on him. How can a man or woman be amiable and angelic when the nerve centers are being rasped and pinched by eyes that are "out of focus?"

Optical Education and Legislation.

(Address by PRESIDENT W. G. MAYBEE, St. Catharines, Ont., before a recent meeting of the Canadian Association of Opticians.)

THESE two themes, it is safe to say, recur very frequently in the mind of the progressive optician and they may rightly be regarded as the great stepping stones to our future progress. I have designedly placed the word "Education" before Legislation, for I believe that is the position it should occupy.

The education of the optician is absolutely necessary in the theoretical and practical points of the profession. In this progressive age union and aggressiveness must be our watchword if we are to raise the profession to the desired point.

The public must be educated up to recognizing the value of having their eyes cared for by men who have devoted time and money to the study of the human eye, its refractive defects and corrections, and to recognition of the diseases to which it is subject; not that opticians may usurp the functions of the medical man, but that they may benefit the public by directing them to the physician for treatment when disease is found, so that it may be arrested in its incipiency.

The public must be educated up to the knowledge that they will receive the same protection against malpraetice that they now receive in their dealings with the dentist, the druggist, etc., so that when in need of glasses they may receive attention from the hands of a man with the legislative seal upon him as a guarantee that he has qualified himself for the work.

This education of the public lies entirely in the hands of the practicing optician. The textbooks which he must use are shrewd, dignified newspaper and booklet advertising, careful, conscientious work and the abolition of the cheap, "help yourself," ready-made glass stock, relegating that business to the stationer, druggist or jeweler who has not the ambition or the desire to take up scientific optical work.

After these, follows the education of the legislator, who will find that the opticians are unanimous in their desire for good legislation, as evinced by a strong representative society, and that they have the educational means for qualifying the optician to meet the demands of any legislative bill that might be passed. When the legislative point is reached then the opticians in every county or constituency must feel it incumbent on them to "lobby" their Representatives by presenting the necessities and facts of the case and securing their promise of co-operation and support.

The point I wish to bring out emphatically to-day is our need of a means and system for giving the necessary full and complete optical education. Many plans have been devised by our optical friends across the border, but though they are all leading to the point, and paving the way to future success in this direction, it seems to me that the final solution is not yet in sight.

In Canada to-day we have several optical schools which will compare favorably with any, two at least of which are owned and conducted by manufacturing opticians. We cannot belittle the great work they have accomplished in the past, but must admit that the phenomenal optical progress made in our country during the past 10 years is almost entirely due to their efforts. It is hardly necessary to say that these efforts are not enurely philanthropic. The profits accruing from these schools, at fees charged, have been no incentive for them.

Their object (in which they have well succeeded) has been purely the creating and increasing of demands for their goods—the building up of their business. They created and fostered a demand for optical education, and now that their objects have been accomplished, they are willing, I am sure, to resign their educational departments to proper authorities; and it can be readily understood that their objects would be thus attained without the expense or responsibilities they now incur.

A problem, and I think the chief one of the Canadian optician to-day is, "How are we to provide a place and means for the proper education of the optician?" Can we get the technical school to incorporate a suitable course in its curriculum or any of the colleges or universities to establish such a course, where the person desiring optical education can go and receive a thorough one, which it is impossible to receive in the limited time and for the small remuneration asked for the short term courses so prevalent? I would like to see this question discussed to-day in all its bearings, and a committee of "willing workers" appointed to give the subject exhaustive research and formulate a plan for our consideration at our annual meeting in the Fall.

Never in the history of our Province have we had such an opportunity of successfully pressing our claims on the Legislature, and it is in Ontario, the stronghold of optical progress in Canada, that the initial steps must be made. Legislators with a large majority behind them are not always disposed to listen to even the most just and reasonable propositions.

Both parties, being evenly divided, are engaged in a supreme struggle for power at the present time; hence the demands of a strong representation would be apt to receive respectful attention.

In the meantime we should at once seek incorporation, thus paving the way for future work and making ourselves a recognized organization. In different towns which I have visited during the past two years I have always seized the opportunity to visit the opticians and talk "society" to them. Several times has the argument been raised that "the association is owned and run by certain manufacturers."

If this were a fact, more shame, I say, to the opticians for allowing such a state of things to exist. But it is *not* a fact.

True it is that this association has at all times received their generous support, and equally true is it that we need it, as well as the support of all of the wholesale men and friends we have, without inquiring into their object in giving it. A glance at the "personnel" of our officers will show that, of all in our Dominion, they are the men who, from the positions they occupy, are the most independent of the wholesaler and who are least likely to be influenced by them in the discharge of their official duties.

For Optical Notes and Briefs See Page 52.

THE JEWELER'S OPTICIAN

Specials in Eyeglass and Spectacle Cases.

This style Eyeglass Case, stamped with your name, address, etc., $13.50 per gross, including lettering. $1.00 per single dozen, unlettered.

Solid Leather covered, Str. Bow, Riding Bow, Offset, or Flat Eyeglass Cases, stamped with your name, address, etc., $6.50 per gross, including lettering. 50c. per single dozen, unlettered.

MICHAEL WOOLF, 71 Nassau St., NEW YORK

Optical Repairing, as well as new order work, are our leading specialties. Mail orders promptly attended to.

BUYERS' INFORMATION BUREAU.

Questions as to the makers of certain lines of goods, where to buy certain lines, where certain kinds of work are done, the owners of certain trade-marks and other matters relating to the buying branch of a jewelry business will be cheerfully answered under this department. *All queries are also answered promptly by mail.*

WILMINGTON, N. C., March 13, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Will you kindly inform me to whom it will be advisable to write regarding small and durable signs or posters attractive in design, for use in hotel or railway corridor? Will appreciate favor of early response and beg to thank you for same.
G. H.

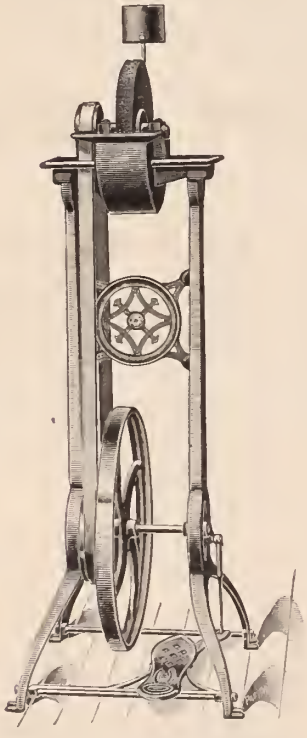
ANSWER:—Sentenne & Green, 150 Nassau St., New York, and I. F. Denzi, 24 Dey St., New York, can supply you with signs such as you describe.

ANN ARBOR, Mich., March 25, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Can you give us names of firms who furnish to the trade, banners for lodges and also prizes?
H. J. S.

ANSWER:—Address the American Flag Co., 45 Elizabeth St., New York; Theo. Gunsel's Son & Co., 2 Fourth Ave., New York, or Annin & Co., 96 Fulton St., New York.

WAKEFIELD, R. I., March 16, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
I had a tall, French clock which had an oval glass globe over it and the customer broke the globe and wants to replace it. Can you tell me where I can get such a globe and the price of the same? The height of clock is 18 inches, the sides of it 5½ inches. Any information as to where such articles may be bought will be appreciated.
R. E. G.

ANSWER:—We would advise you to write to S. J. Pardessus, 74 Murray St., New York, or Nicholas Wayler, 50 Barclay St., New York.



MOBILE, Ala., April 7, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Kindly give me the names of makers of silver plated water pitchers with musical attachment in the bottom. Would want them in quantities to use as prizes with merchandise sold to dealers. Thanking you in advance,
Yours respectfully, G. A. P.

ANSWER:—We know of no plated ware concerns who make water pitchers with music attachments. The Jacot Music Box Co., 39 Union Sq., New York, can furnish them to order. Lazarus, Rosenfeld & Lehman, Murray St., New York, import beer mugs with music box attachments.

PALMER, Mass., April 13, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Can you send me the address of the "Rogers Statuette Co.?" They used to be at 440 Pearl St. Thanking you in advance. E. E. B.

ANSWER:—The Rogers Statuette Co. is out of business. We understand that the Long Island Statuary Co., 110 Broadway, Long Island City, N. Y., carry a similar line of statuettes.

Production of Diamonds and Precious Stones in New South Wales.

IT is estimated that diamonds to the value of $48,780 were obtained in New South Wales during 1902. The stones are said to have commanded a ready sale, and an increased output is anticipated for the present year. The total production of diamonds to the end of 1901 is estimated at 109,425 carats, valued at $326,455.

The output of opal in New South Wales is confined to the Whitecliffs field, the value of the production for 1902 being estimated at $600,000. This shows an increase of $200,000 over the previous year, and it is largely due to a lack of work in other districts.

European Laws Relating to Fineness of Gold and Silver.

The following table of the laws and rules controlling the manufacture and quality of gold and silver in foreign countries has been compiled by the Swiss Federal Bureau of Gold and Silver Products for the benefit of Swiss manufacturers and exporters:

COUNTRY.	CONTROL.	FINENESS OF ALLOYS.	PRINCIPAL PROVISIONS.
Austria-Hungary.	Obligatory. (Laws of Aug. 19, 1865, and May 23, 1875.)	Gold: 0.920, 0.840, 0.750, 0.580. Silver: 0.950, 0.900, 0.800, 0.750.	The maker's mark is obligatory.
Belgium.	Optional. (Law of June 5, 1868.)	Gold: 0.800, 0.750. Silver: 0.900, 0.800.	Works which do not correspond to the indicated fineness receive the stamp of a lower quality.
Denmark.	Optional. (Law of April 5, 1888.)	All finenesses to a minimum of 0.585 for gold, and 0.826 for silver.	Works must not have any lower mark than the lowest prescribed finenss.
England.	Obligatory. (Different laws, 1880-1891.)	Gold. 0.916, 0.833, 0.750, 0.625, 0.500, 0.375. Silver: 0.925.	The stamp is marked by the jewelers' corporations under control of the State.
France.	Obligatory. (Law of Crumaire year VI., Nov. 11, 1797.)	Gold: 0.920, 0.840, 0.750. Silver: 0.950, 0.800, Fineness allowed for exported articles: Gold, 0.583.	Works which do not correspond to the indicated quality are cut. Special stamps for imported ware.
Germany.	Law concerning quality of July 16, 1884.	Any fineness for jewelry; for all other works the lowest is 0.585 for gold, and 0.800 for silver.	Indication of fineness must be expressed in thousandths. All works must be provided by the manufacturer with the manufacturer's mark and the imperial crown (in the sun sign for gold and the moon sign for silver); this latter is forbidden for jewelry.
Holland.	Optional. (Law of Sept. 18, 1852.)	Gold: 0.916, 0.833, 0.750. Silver: 0.934, 0.833.	Stamping with the maker's mark is obligatory. Special stamps for imported ware.
Italy.	Optional. (Law of May 3, 1873.)	Gold: 0.900, 0.750, 0.500. Silver: 0.950, 0.900, 0.800.	Works which do not correspond to the indicated fineness receive the stamp of a lower quality.
Norway.	Obligatory.	Gold: 0.750, 0.583, 0.500. Silver: 0.830.	The indication of fineness and the maker's mark are obligatory.
Portugal.	Obligatory. (Rules of Feb. 10, 1886, and Aug. 9 and 25, 1891.)	Gold. 0.750, 0.580. Silver: 0.800.	The aforesaid qualities are for watch cases. These qualities are higher for other objects.
Russia.	Obligatory. (Rules of July 1 and 13, 1896.)	Gold: 0.948(91), 0.854-(82), 0.750(72), 0.583⅓-(56). Silver: 0.948(91), 0.916⅔(88), 0.875(84).	No part of the objects can he lower than the indicated fineness. The stamp indicates the fineness by "Zolotniks."
Servia.	Obligatory. (Law of March 3, 1834.)	Gold: 0.920, 0.840, 0.750, 0.580. Silver: 0.950, 0.900, 0.800, 0.750.	The maker's mark is obligatory.
Spain.	Obligatory. (Different ordinances since 1771.)	Gold: 0.916, 0.833, 0.750. Silver: 0.916, 0.750.	Divers provisions seldom applied.
Sweden.	Obligatory. (Rules of 1759.)	Gold: 0.969, 0.833, 0.750. Silver: 0.812½.	The indication of fineness, the place of stamping, of the year and the maker's mark are obligatory.
Switzerland.*	Obligatory for all watch cases that are marked with a legal stamp. Optional for jewelry which is needed for educational purposes. (Federal law of Dec. 23, 1880.)	Gold. 0.750, 0.583. Silver: 0.875, 0.800.	Works which have not been officially controlled, must not have any other indication than that of their real fineness, if they are marked by such fineness, the maker's mark is obligatory. The law has no fiscal character.
Turkey.	Obligatory.	Silver: 0.900.	No limitations for gold.

*Switzerland has special regulations for watch cases which are destined for England, Germany and Russia. The Swiss regulations correspond also with those of Austria-Hungary. Watch cases provided with the official, ordinary or special Swiss stamp, are admitted in nearly all countries without any difficulty.

UNION BRAIDING CO.,

SANDWICH, MASS. MANUFACTURING JEWELERS.
New York Office, 11 Maiden Lane.

Makers of the Largest Assortment of

Braided Silk Guards,
Lorgnettes,
Vest Chains,
Fobs, Etc.,

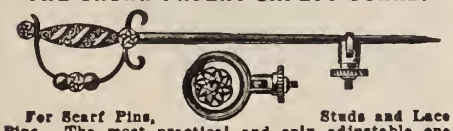
Both Plain and Mounted in ROLLED PLATE AND STERLING SILVER.

Ask your Jobber for our goods.

We are also manufacturers of the World Renowned **"HERCULES" Silk Eye Glass Cords.** (TRADE-MARK REGISTERED.)

100,000 American watches have ABBOTT'S PATENT STEM-WINDING ATTACHMENT.

A few more KEY-WINDERS are still in use. Send them to us for alteration and MAKE A FEW DOLLARS FOR YOURSELF.



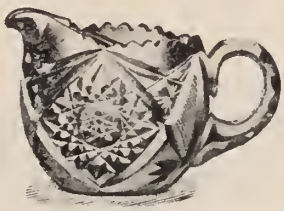
HENRY ABBOTT, 9 Maiden Lane, New York.

Horological Department,
BRADLEY POLYTECHNIC INSTITUTE,
Formerly Parsons Horological Institute,
PEORIA, ILLINOIS.
Largest and Best Watch School in America.
We teach Watch Work, Jewelry, Engraving, Clock Work, Optics. Tuition reasonable. Board and rooms near school at moderate rates. Send for Catalog of Information.

If a customer should bring you any Diamond Jewelry to sell and you do not care to buy it yourself, take it to

CHAS. S. CROSSMAN & CO.,
NO. 3 MAIDEN LANE, NEW YORK,
where you can have an immediate Cash Offer.
Pearls and other Precious Stones also bought. Trade references if desired. Correspondence solicited.
Appraisals made for Estates. Established 1880.

THE CROHN PATENT SAFETY GUARD.



For Scarf Pins, Studs and Lace Pins. The most practical and only adjustable one invented. Price, $1.50 per doz. For sale by all wholesale jewelers and material houses. Sample by mail, 25c.; in 10k. gold, 75c.; 14k., $1. M. CROHN, Maker and Inventor, 48 and 50 Maiden Lane, N. Y.

PATENTS
obtained on inventions and designs. Trade-marks, prints and labels registered.

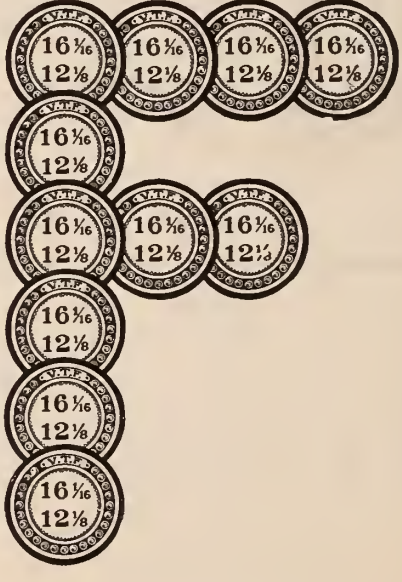
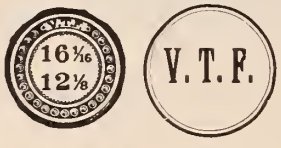
were awarded to
PATEK, PHILIPPE & CO.
in the timing contest of the Astronomical Observatory in Geneva, for the year 1901, comprising the First Series Prize, all the three First Prizes, the only Second Prize, four Third Prizes out of six, three Fourth Prizes out of six, four Honorable Mentions out of eight, and twelve Single Mentions out of nineteen.
68 NASSAU ST., NEW YORK. GENEVA, SWITZERLAND.

"Practical Course in Adjusting."
By THEO. GRIBI. Price $2.50 All Jobbers or Jewelers' Circular Pub. Co.



THE BEST IS ALWAYS THE CHEAPEST; THIS applies to Watch Glasses as well as to anything.



The best Watch Glasses are those that are carefully made, from the proper stock, properly labeled and correctly gauged.

The CHEAPEST Watch Glasses are those which require the least time to fit, and in which there is the least percentage of breakage.

The **V. T. F.** Glasses combine all of these cardinal qualities and BEAR THIS LABEL: Insist upon getting the **V. T. F.** and take no other.

REVERSE.

N. B. — See that each Geneva Glass is wrapped separately in tissue paper, and this paper stamped with the size of the glass, and **V. T. F.**

FOR SALE BY ALL REPUTABLE JOBBERS.

The Peatfield Calendar Clock.

DR. JOHN J. PEATFIELD, Arlington, Mass., has received patents covering all the details of a remarkable invention in the shape of a calendar attachment for large clocks. Such attachments are not new, but in Dr. Peatfield's machinery there is such entire originality that the patent was issued without sign of opposition or question.

Instead of following the course of the

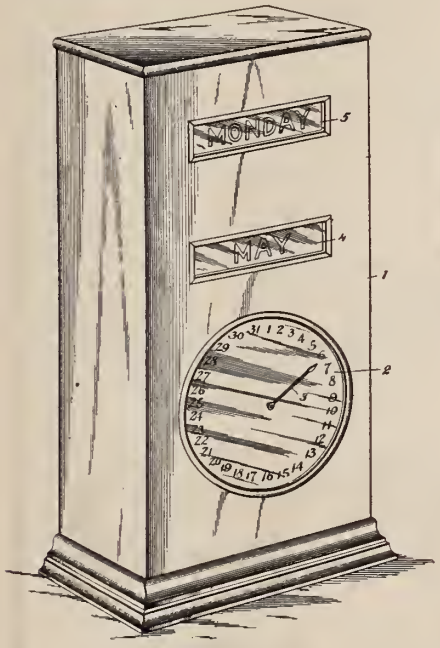


FIG. 1.

hands around the dial, in this new invention the name of the month, the name of the day and the necessary figure to indicate are shown through open spaces, one below the other, and large enough to be read with ease across a large room. This is accomplished by levers working cylinders which revolve one within another, in a curious way.

But the genius of the invention, if we may so speak of it, lies in the automatic eccentricities of the mechanism which conform to the unequal length of months and also the leap year with perfect exactness, and beyond winding once in 13 months, the machine requires no care whatever after being adjusted. The original design and several working models built are the work of Dr. Peatfield's own hands, and were made in a sort of miniature machine shop he has set up in one of the rooms adjoining his dental parlors in Finance Block.

In Fig. 1 is shown a perspective view of a calendar embodying the invention. Fig. 2 is an end elevation and principal section of the calendar. The following is an extract from the specifications of Dr. Peatfield's calendar clock.

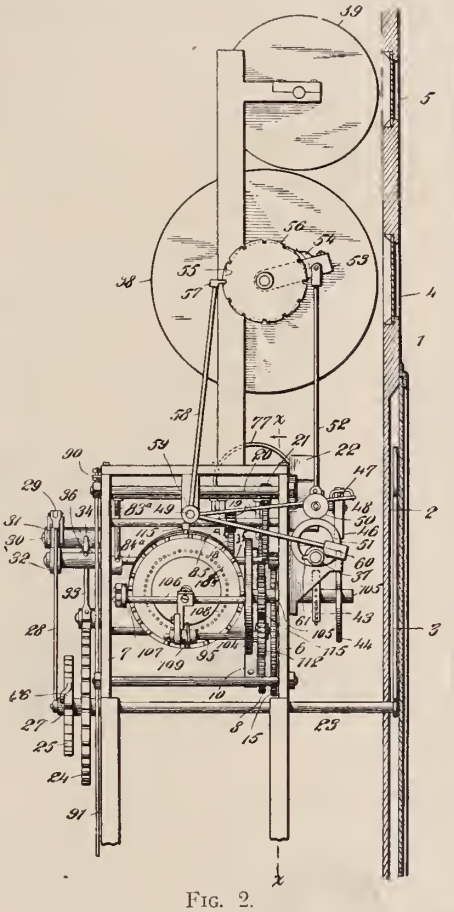

FIG. 2.

The inventor's claim as new in his clock consists of

(1) In a calendar, devices for indicating the date, day and month divisions of a year, and means for causing axial and rotary motion of the said devices.

(2) A motive power to operate the rotary part for indicating dates. A wheel having an axial rotary motion and a transverse rotary motion. This wheel is operated from the motive power in its transverse rotation, lugs or projections on the opposite sides of said wheel. It also has segmental slots in its periphery, bridges in the periphery opposite sundry of the projections or lugs, and means operated by the transverse rotary motion for causing its axial rotary motion.

(3) A counter-shaft at the front of the machine, a motor for the counter-shaft, a dirving connection hetween said counter-shaft and the rotary part, a day-cylinder, a ratchet-wheel on the shaft of said cylinder, a pawl engaging with said ratchet, a rod extended downward from the pawl, a cam on the shaft for engaging with said rod, and a locking device for the cylinder and moved to its releasing position hy said shaft.

(4) A shaft having driving connection with the rotary part for indicating dates and a motor for operating the shaft, a day-cylinder, a ratchet-wheel on the shaft of said cylinder, an arm mounted to swing on said shaft, a pawl carried by the arm for engaging with the ratchet-wheel, a rod extended downward from the arm, a cam on the shaft for engaging with said rod, a stop or locking-wheel on the shaft of the cylinder, having notches in its periphery, a locking-dog for engaging in the notches, and a projection on the shaft for moving said dog to its releasing position.

(5) A day-cylinder, a ratchet-wheel on the shaft of said cylinder, an arm mounted to swing on the shaft, a pawl carried by said arm for engaging the ratchet-whcel, and the means operated by the motor for causing the movements of said arm and pawl, a stop or locking disk on the shaft of the cylinder and having notches, the said disk being of larger diameter than the ratchet-wheel, and a stop or locking device for engaging in the notches of said disk and operated in one direction by the motor.

(6) A month-cylinder operated hy means of the motor for causing movements of the cylinders, means for preventing movement of the month-cylinder during certain movements of the day-cylinder and a part having a transverse and axial rotation for controlling the motor.

(7) A cam carried by the shaft for operating the day-cylinder, a cam carried by the shaft for operating the month-cylinder, and means operated by the shaft for preventing a movement of the month-cylinder during certain movements of thc day-cylinder.

(8) A ratchet-wheel on the shaft of the month-cylinder, a swinging arm on said shaft, a pawl carried by the arm for engaging with the ratchet wheel, a rod extended downward from the arm, a cam on the shaft for engaging with said rod, a disk having an outwardly-opening notch, a gear connection between the shaft and said disk, a swinging arm or rod having connection with the rod extended from the arm, and a finger on said arm or rod for engaging on the periphery of the disk and adapted to drop into the notch thereof.

(9) A four-year wheel having an axial rotary motion and a transverse rotary motion, means for imparting said motions, a swinging rod, a hammer on the end of said rod for engaging with the four-year wheel, and means operated by an upward movement of said swinging rod for releasing the motor.

(10) A dial, a hand movable over said dial, a shaft on which the hand or pointer is mounted, a ratchet-wheel on said shaft, an arm mounted to swing on the shaft, a pawl carried by the arm for engaging with the ratchet-wheel, a draw-rod extended from the arm, a cam operated by the motor for moving said draw-rod upward, a stop-wheel on the shaft and having notches in its periphery, and a holding-bar for engaging in said notches, the said holding-bar being moved to its releasing position by a movement of the motor.

(11) A frame to which rotary motion is imparted from the motor, a four-year wheel mounted to rotate axially in said frame, a fixed rack or gear, a worm-shaft, a pinion or said worm-shaft engaging with said fixed rack or gear, a worm on the shaft, said worm having a straight or inoperative portion, and teeth on the four-year wheel for engaging with said worm.

(12) A four-year wheel having an axial rotary motion and a transverse rotary motion, the said wheel having segmental slots or channels in its periphery, bridge-hlocks in the periphery of the wheel, a series of lugs extended outward from one face of the wheel at its periphery, and three lugs extended from the opposite face of the four-year wheel near its periphery.

(13) A train of driving wheels, a spring for

operating said wheels, a rock-shaft, a stop-arm extended from said rock-shaft, a pin on one of the train wheels for engaging with said stop-rod, another rock-shaft, two arms or rods extended from said other rock-shaft, the one adapted to engage with the stop arm or rod, and the other being adapted to be moved into line of movement of a pin on another of the driving train-wheels, means having connection with a clock mechanism for moving the last-named rock-shaft, a date-indicator operated by the train of gearing, a hammer carried by the first-named rock-shaft, and a four-year wheel adapted to be engaged by the hammer, and said four-year wheel having an axial rotary motion and a transverse rotary motion.

(14) A rock-shaft having connection with the motor, a curved arm extended from said rock-shaft, a curved cam or finger adapted to be engaged by said arm, a pinion on the shaft of said cam, a segmental rack engaging with said pinion, and means for operating said segmental rack.

(15) A shaft for moving the rotary part and operated from the motor, a worm-wheel shaft, a worm-wheel on said shaft, a worm on the first-named shaft for engaging with the worm-wheel, a frame carried by said worm-wheel shaft, a four-year wheel mounted to rotate in said frame, a fixed gear, a shaft having bearings in said frame, a pinion on the shaft and engaging with the fixed gear, a worm on said shaft, 48 teeth extended from one face of the wheel for engaging with said worm, and devices carried by the wheel for controlling the movements of said rotary part.

(16) A wheel having a transverse and axial motion for governing the motor, a counter-shaft operated by said motor, a day-cylinder arranged above the motor, a month-cylinder arranged above the motor, means operated from one end of the counter-shaft for imparting motion to the day-cylinder, means operating from the opposite end of the shaft for moving the month-cylinder, and means operated by the shaft for preventing movements of the month-cylinder until the change is made from one month to another.

(17) A date indicating device operated by the motor, a four-year wheel having axial and transverse movements for controlling movements of said date-indicating device, a hammer for engaging with said wheel, a rock-shaft by which the hammer is carried, an arm extended from said rock-shaft, and a cam operated by the motor for causing vertical movements of said arm, substantially as specified.

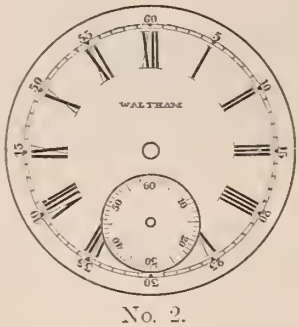
To an Old Clock.

NOTE.—The following lines accompanied the presentation of an old Howard clock to George Porth, a jeweler of Jefferson City, Mo., by F. O. Tobias, Yardmaster of the Missouri Pacific Railway, who had charge of the old timepiece.

I send you this old Howard clock,
(The poor, old, worn out skate),
And when you gaze upon its face,
Please pause and meditate.
For legends say (perhaps 'tis true),
That this clock's very old,
That Adam saw it when he first
Stood shivering in the cold.
When Eve ate the forbidden fruit;
(Ten thousand years have passed),
This clock gained 30 seconds then,
And has ever since been "fast."
It's hung upon an iron hook
Since the Eden episode,
And looked sublime, and kept good time,
For the M. O. P. Railroad.
Full many a night, by electric light,
(Here's where you ought to weep),
With saddened face, at the disgrace,
Its watched the night man sleep.
Its "work" is somewhat passé now
And hard to understand;
It does not "let its right one know
What's done by its left hand."
So don't depend upon it
When you're "making up" fast freight,
Or you'll be very badly off,
And get your trains out late,
Its days cannot be many now,
And some time—with a sigh—
This good old Howard timepiece
Will "Adjourn, *sine die*."

A report from Neufchatel, Switzerland, says that the Swiss clockmakers will not participate officially in the St. Louis Exposition, owing to the small number of the makers willing to exhibit.

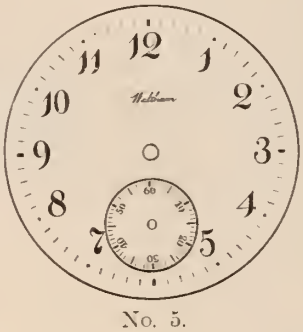
Some New Watch Dials.



A NEW and select collection of American dials is now ready to be placed on the market by the American Waltham Watch Co. Those illustrated herewith are for 12 size watches, but they can be had for watches of all sizes.

In order to avoid mistakes in ordering them from material dealers, the following denominations should be used:

No. 1 is called the Jurgensen or Light Roman.



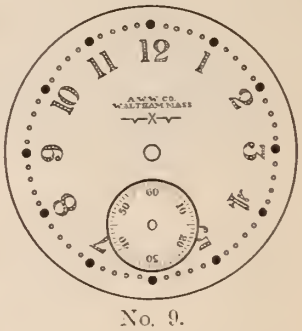
No. 1.

No. 2.

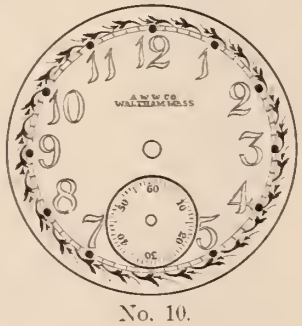
No. 3.

No. 5.

No. 4.



No. 6.



No. 8.

No. 7.

No. 9.

No. 10.

No. 2 is called the Regular Roman.

No. 3 is called the regular Upright Arabic.

No. 4 is called the Radiating Arabic.

No. 5 is called the upright Dauphin Arabic.

No. 6 is called the Radiating Dauphin Arabic.

No. 7 is called the Major Arabic.

No. 8 is called the Roman Fancy.

No. 9 is called the Small Gold Fancy Arabic.

No. 10 is called the Large Gold Fancy Arabic.

Skyscrapers and Pendulum Clocks.

William L. Rose, the horological expert and secretary of the National Electric Clock Co., is reported to have made the following statement:

"There is not a 'skyscraper' in New York that does not sway backward and forward every 24 hours, and I'll stake a good $10 dinner that every pendulum clock above the seventh floor of any of these buildings, if placed facing either east or west, will stop inside of 24 hours and cannot again be made to run regularly."

Mr. Rose explains that the sun's heat on the east side of a building causes the steel frame to expand and the west side to contract, and the reverse in the afternoon, causing the structure to tilt. "The clock facing east will stop in the morning because its pendulum by the tilt of the building westward is forced back against the frame, and in the afternoon by the pendulum being forced forward," says Mr. Rose. The wager was taken by A. S. Woodliff, a clock expert for a Chicago firm.

The Secondary Error and the Nickel-Steels.

(Translated for The Jewelers' Circular-Weekly from the *Journal Suisse d'Horlogerie.*)

THE singular variation in the nickel-steels, to which Prof. Thury has drawn the attention of horologists, places the question of the secondary error in a new light.

Two facts are especially prominent in the examination of the figures. The first is that the average dilatation of the nickel-steels varies between very extended limits. The second is that the two terms of the formula are continuous functions of the percentage and that their variations are completely independent. The second coefficient reaches, like the first, values which have not been met with in any other alloy. They are considerable for alloys in the neighborhood of 30 per cent. of nickel and decrease gradually, becoming negative at about 36 per cent. of nickel. This peculiarity allows us to realize for the difference $b_2 - b_1$, values presented by no other class of alloys.

Suppose, for example, that it is possible to construct a balance with the alloys of 28.7 and 44.4 per cent. The slight difference of the average dilatation of these alloys would oblige us to make a thin rim; but this might be done. The value of the secondary error of this combination would be $S = 12.27 \times \frac{32.5 \times 225}{3000} = 30.$

The part of the secondary error due to the rim in the combination selected would be therefore 30 seconds. The dilatability of the outer alloy increasing at the same time as the temperature, the advance would go on increasing, so that if the compensation were adjusted for extreme temperatures, the timepiece would lose at medium temperatures. The correction is in the direction required by steel springs, but it is for the entire balance more than 10 times too great. The combination of the alloy of 44 per cent. with brass will give for the secondary error the value $S = 12.2 \times \frac{8.0 \times 225}{10200} = 2.2$, or a loss of 2.2 seconds per day at 15 degrees.

If we refer to the results realized on a balance of current construction, we shall see that the action of the rim ought to be diminished by about a tenth of its value in order to give the total action of the balance. The last combination corresponds therefore, as much as possible, to the conditions of the problem.

Still, in order that the combination of the brass with the nickel-steel in question may be used with chances of success, it is necessary that the latter should fill a certain number of other conditions, which depend both on the possibility of the construction of the balance and the preservation of its rate.

I will say first that this alloy is not easily welded to brass, that it may be turned without too much difficulty, and that the perforation for the small screw-holes alone presents serious difficulties. These are not insurmountable, and the price of the watches in which it is desirable to correct the secondary error to its full extent is sufficiently high to prevent the increase in the cost of the balance from being important.

This alloy, like all those of the same class, cannot be tempered. Heated at a very high temperature, it is but slightly elastic and certainly too soft for working conveniently and without permanent deformation. But after having been exposed to the temperature of the fusion of brass, it is still sufficiently elastic to cause the rim to work within the ordinary limits of the variation of the temperature with perfect security. Its slight oxidability due to its high percentage of nickel renders it absolutely resistive to rust in the most humid atmosphere.

A bar of this alloy, forged hot and cooled without special precaution, has been carefully measured and then placed in an oven and heated to 100° C. It has been kept for four hours in this temperature and measured anew at the ordinary temperature. The experiment was repeated with higher degrees of heating; the heating not being continuous, the entire operation extended over about two months, the total variations of the bar in millionths of its length being as follows: Four hours, — 0.9 millionths; 19 hours, — 2.1 millionths; 53 hours, — 2.3 millionths; 104 hours, — 1.6 millionths; 218 hours, — 1.7 millionths. The bar is therefore shortened by annealing, but the variations ascertained after the first hours of exposure at 100° C. are at the limit of what the most precise measures allow of guaranteeing.

A variation of a millionth in the length of a nickel-steel strip in the rim of a balance, of which we have calculated the elements, would modify the rate of the watch about one second per day. We are considering only the variations of the nickel-steel separately. The variations of the nickel-steel would not allow of a precise conclusion as to the variations due to the tensions of the bi-metallic rim. It must be remarked, however, that most of the usual metals or alloys experience, under the action of annealing or in time alone, modifications greater than those which have been found in the nickel-steel with 44 per cent. of nickel. In the case of tempered steel they are exceedingly greater.

In the application of a nickel-steel to the construction of the balance leads to the consideration of these alloys in general for the compensation of the bi-metallic balance. The very slight dilatability of certain of these steels necessitates giving to the balance new proportions quite different from those hitherto in use. In combining invar* with brass an average difference of dilatation is obtained between the two parts of the rim 2.4 times greater than in the ordinary combination of brass with steel. The same compensating power is therefore secured with a thicker rim, and consequently a stronger rim. If it is desired to retain the same thickness the cutting must be made near the center, which, as we have seen, presents important advantages. Or again by combining the new balance with a hardened nickel-steel spring the compensation with a thick rim cut in the middle will be secured.

The very slight magnetism of certain nickel-steels has attracted the attention of some watchmakers who are interested in the construction of non-magnetic compensating balances, more stable or less costly than those hitherto constructed.

Suppose that brass is associated with two alloys of nickel of 26.2 and 27.9 per cent., of which the formulas of dilatation have already been given. The average dilatation of these alloys are, between 0° and 30°, 13.7 and 12.7 millionths. The differences with reference to brass are 5.0 and 6.7 millionths and are to the differences obtained with ordinary steel in the respective ratios of 0.6 and 0.8. The rims must therefore be thinned in the same proportion to give the same compensation. But it must not be forgotten that these balances are to be employed in compensation with springs slightly magnetic, like the soft springs of steel or nickel, which require in general less compensation than steel springs.

Reverting to the usual proportions of ordinary balances, they will be found in the normal conditions of construction. The secondary error will, in the case of the first alloy, be represented by the relation: $S = C \times \frac{15.7}{5000} \times 225 = 070\ C$, and in the second by $S = C \times \frac{23.4}{6500} \times 225 = 0.81\ C.$

I have allowed for c the value 12.3, but this number corresponds to the steel spring; for soft nickel-steel springs it may vary from 5 to 10, and the secondary error due to the balance would then be comprised between 3 and 8 seconds.

As the interior part of the rim dilates more and more as the temperature rises, the compensating power per degree diminishes in the same direction; and the whole involves a retardation in heat—that is, an advance at the medium temperatures.

*The reader will remember that the alloy invariably contains 36.2 per cent. of nickel.

The Curious Clock Plant.

THE conservatory of Purdue University, Lafayette, Ind., is in possession of several rare specimens of what is commonly known as the clock plant, reports the *Cincinati Enquirer.*

The plant is a native of Borneo, and in its native State never exceeds three feet in height. The young plants at the Purdue conservatory are only four inches in height. The bloom is pea-shaped and lilac in color.

The name clock plant is derived on account of the action of the sun's rays on the leaves. These leaves are three in number, a large one extending forward, with two small ones at the base pointing sideways. These coming in contact with the rays of the sun oscillate like a pendulum of a clock, the larger leaf moving upward and downward, going its full length every 45 minutes, the smaller leaves moving toward the larger, completing the distance forward and back every 45 minutes, thus resembling the hour and minute hands of a clock.

The United States Conservatory at Washington, having lost the same character of plants by the cold of the present Winter, have requested the university to supply them with specimens, and several plants will be given the Government for use in the conservatory at Washington. The specimens at Purdue are the only ones in existence in this country.

Workshop Notes and Queries.

[*Answers are solicited from our readers to the questions published weekly on this page.*]

QUESTION No. 442.—**Gilding.**—*Tell me how to gold plate articles by melting the gold and pouring it on the article.* *J. W. H.*

ANSWER:—We cannot tell you how gilding can be done in this manner. We have never seen anybody use such a method. Our Workshop Notes contain descriptions of several methods of gilding, and perhaps you may find something that suits you.

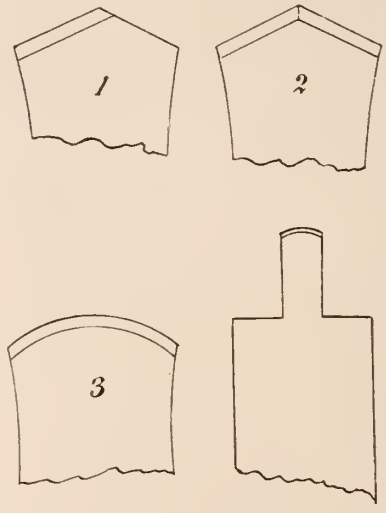
QUESTION No. 443.—**Roller Jewel.**—*Should the flat face roller jewel fit tightly in the table? If not, where should the vacancy be, behind the jewel or in front?* *J. W. H.*

ANSWER:—We would advise you to follow the articles now running on "How to Repair American Watches." If you study the different illustrations already given and those to be shown as the article progresses you might be able to judge for yourself when the vacancy should be in front and when it should be behind.

QUESTION No. 444.—**Escapement.**—*Is there anything wrong with the escapement of a watch when the balance wheel is taken out and the fork vibrates three or four ticks before it stops? The watch runs nicely and keeps good time.* *J. W. H.*

ANSWER:—The escapement is probably too shallow; that is, the teeth of the escape wheel, instead of dropping on the locking plane, drop on the impulse face of the pallets. The remedy for this is to make the escape deeper. You say the watch runs nicely and keeps good time. We admit that a watch can run when the escape is too shallow, but that it can keep good time and run nicely, that is something we cannot comprehend, if you mean the watch runs satisfactorily and regularly.

QUESTION No. 445.—**Cement.**—*Kindly publish in your Workshop Notes and Queries a receipt for making a chaser's hard cement.* *M. H.*

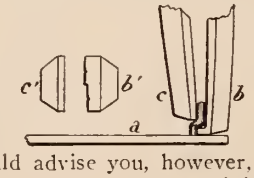


ANSWER:—Chasers generally use pitch for repoussé work; engravers and setters use a cement composed of the following ingredients: Resin, 1½ parts; burgundy pitch, 2 parts; plaster of paris, 1 part; beeswax, 1½ parts. Melt these in an iron pot and stir carefully until a thorough mixture has been effected, then pour the mixture either into a vessel of cold water or upon an iron pan coated with plaster of paris or whiting. Some setters prefer shellac to cement.

QUESTION No. 446.—**Onyx.**—*Will you kindly tell us how to make a cement for mending onyx clock cases; also how to clean them?* *C. C. T.*

ANSWER:—A good cement for marble, alabaster and onyx is the curd cement made as follows: Add a half pint of vinegar to a half pint of skimmed milk. Mix the resulting curd with the whites of five well-beaten eggs and sufficient powdered quicklime sifted in with constant stirring, so as to form a paste. It resists water and a moderate degree of heat. The cement, which must be used fresh, hardens slowly and the broken parts must be firmly kept together for two or three days. To clean onyx the following is an excellent method: First brush the dust off the piece to be cleaned, then apply with a brush a good coat of gum arabic, of about the consistency of thick office mucilage; expose it to the sun or dry wind, or both. In a short time it will crack and peel off. If all the gum should not peel off wash it with clean water and a clean cloth. If the first application does not give the desired result, it should be applied again. If the onyx be stained, apply fuller's earth, pipe clay or whiting for three or four hours; then wash off with hot water and soap. Or take ground pumice stone of the finest quality and mix it with verjuice; let it stand for two hours, then dip in a sponge and rub the onyx with it; wash with a linen cloth and fresh water and dry with a clean linen rag. Any kind of marble may be treated in the same manner.

QUESTION No. 447.—**Pivot.**—*I have not got the issues of* THE CIRCULAR-WEEKLY *that you refer to. I will be very much obliged to you if you will give me the proper information which you say has been published.* *J. W. H.*

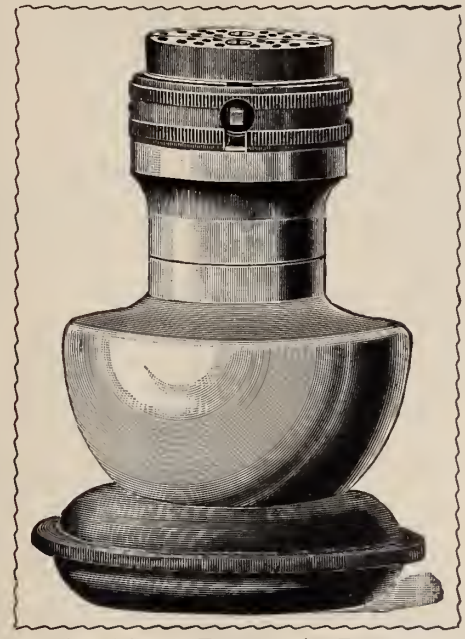


ANSWER:—You asked, first, what kind of drill to use for the drilling of steel which is tempered to a dark blue. The illustrations given herewith are illustrative of our article published under the title, "How to replace a broken pivot." Drill 1 has only two

beveled cutting edges, one on each side of the blade. This drill is mostly used with a continuous rotary motion in a direction such as is produced by the American or imitation American lathe. It is less useful when drilling with the bow, where there is backward and forward rotation, although some watchmakers prefer it even then, because they have managed to master the trick of pushing the drill at the forward pulling and of slackening that pressure at the backward pulling of the bow. It is evident that this latter method requires great attention and a needless expenditure of skill and time, which is all unnecessary when using the American lathe. The beveled edge must be made at the left or right side of the blade, according to the direction in which the drill or the piece to be drilled rotates. Drill 2, which is beveled on four sides, is generally used for drilling with the bow. It does not cut, but merely scratches the metal. Drill 3 can either be beveled over half of its curve, as represented in drill 1, or along its entire curve. This latter form is generally adopted for such small drills as pivot drills. Drills ending in a more acute angle are better suited for brass or other metals of moderate hardness. A very good pivot drill can be made from a piece of mainspring. The illustration shows how it it filed and finished. The hardening of small drills is done simply by sticking the red hot drill in a lump of beeswax or by swinging it briskly in the air. No tempering is needed. As a lubricant use plenty of turpentine or petroleum, and rotate the lathe with a moderate or rather slow speed. Secondly, you ask to be informed as to how you can make a chuck to hold the drill, so as to be true. When we intend to drill a hole in the balance staff, we do not put the drill in the chuck and hold the staff against it, but we do just the reverse; that is, we adjust the staff either in a wire chuck, if we have a true chuck and lathe, or we use a cement chuck. If a wire chuck is taken select one that fits most closely to the staff, place the chuck in the lathe and then place the staff in the chuck; set the lathe in moderate motion and slowly fasten the staff in the chuck and adjust it until it runs true; then tighten the steel center screw firmly. If a cement chuck is selected, heat it so as to be able to push the staff home through the cement, then the lathe is set in moderate motion, and while the cement is cooling off, the staff is adjusted true with a pointed peg wood resting on the T rest. To do the drilling, the drill is fastened in a pin-vise and held to the staff, when the lathe is set in moderate motion. In order to steady the hand, the T rest can be used to lay the pinvise on.

QUESTION No. 448.—**Guard Pin.**—*If the guard pin in a six size watch needs bending, can it be done without taking out the fork? If so, which is the best way to do it?* *R. R. T.*

ANSWER:—There are watchmakers who take the risk of bending the guard pin when the fork is reposing underneath its bridge.



We would advise you, however, to remove it, in order to prevent any injury to the pivots. Suppose you leave it in place and bend the guard pin, you will not be able to see if in so doing you have also bent one or both of the pivots without unscrewing the bridge. Therefore there is no use in trying to save time by not removing the fork from the movement. A useful tool to bend the pin can be made from an old pair of tweezers—see answer to Question No. 170, issue of July 9, 1902, of which the sketch is reproduced herewith.

THE RAMBLER'S NOTES.

WHAT THE RAMBLER SAW AND HEARD AMONG THE DEALERS IN ART POTTERY, CUT GLASS, BRONZES, ETC.

NEW HONESDALE GLASS.

HONESDALE glass, showing new designs in etchings and colors, is being handled more extensively this season than ever before by C. Dorflinger & Sons, 36 Murray St., New York. The chief beauty of the present line carried by the concern is in the quiet shading of the different colors and the new and original scroll designs and patterns. This ware is made by eating away colored layers of glass by the chemical action of hydrofluoric acid. The different colors are put on in form of layers or strata, so that when one of these layers is eaten away by acid, it leaves a pattern or design in the color of the next layer beneath. If still another color is wanted, this layer also is eaten away and the next layer exposed. The patterns or designs are made by coating the glass with a wax or gelatine substance, and acid is poured into these designs and allowed to eat until the shade desired is obtained. The principal colors in some of the Spring samples displayed in the concern's warerooms are pale yellow, various shades of green, red, maroon, blue and gray white. The decoration scrolls and patterns are mainly on the *art nouveau* order and are full of graceful curves. Perhaps the most distinguishing feature about the ware is the absence of sharp or straight line figures used in the decoration. The ware is made up into vases, rose centers, water bottles and a variety of other useful and decorative pieces. It is selling better this season than ever before, and the new designs and combinations of colors that have been recently produced have done much to place the ware at the head of the cameo and intaglio art goods in colored glass handled by jewelers.

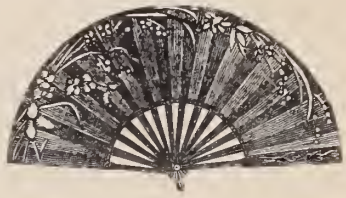
*

KRONACH POTTERY AND ORNAMENTS.

KRONACH ware, which in some respects resembles gilded Teplitz, is one of the attractive import lines recently placed on display in the art department of Geo. Borgfeldt & Co.'s establishment, 3d, 4th and Wooster Sts., New York. The chief characteristic of this line is to be found in the color schemes in its decorations, the shades used being principally a green grey and bright gold. The body of the ware, which has a glazed finish, has the grey shade, and the figures and floral decorations in relief have a golden hue. The colors together make a very effective combination, and this is enhanced by the beauty of the subjects and the pose of the figures, producing an effect that is artistic in every respect. The ware is made up in all the conventional articles of utility and ornamentation and the gilded figures are almost entirely of French and *art nouveau* styles, the subjects being posed gracefully on sea waves or at inland fountains. The green grey of the ware sets off the figures and makes for them a quiet and artistic background at once attractive and new. This line is supplemented by an attractive assortment of metal mounted glass and pottery. Additional shipments from Europe containing a variety of new lines are expected in a few weeks.

*

GLASS NOVELTIES AND FANS.



SPRING novelties in cut glass are being placed on the market by the C. F. Munroe Co., Meriden, Conn., whose New York warerooms are at 28 Barclay St. These novelties consist of fern dishes, jewel caskets and writing desk accessories mounted in silver. They show a variety of different cuttings characteristic of the company's work and are unusually chaste and fine in appearance. They come within the category of the finest art goods handled by the retail jeweler and make an attractive addition to any stock. The concern is also handling an excellent line of imported silk and feathered fans, ribbed with ivory, tortoise shell, horn, bone and lacquer. A large shipment of these fans is expected from Europe in a few days, and as soon as these arrive jewelry buyers will have an opportunity to inspect one of the most attractive selections of art fans that has ever been offered to the trade.

THE RAMBLER.

The Newark Cut Glass Co., 60-62 Arlington St., Newark, N. J., has bought out the cut glass equipment, consisting of 42 frames and machinery, of Jno. W. Reddall & Co., manufacturers of silver novelties and cut glass, Newark, N. J., and has moved it to its own plant on Arlington St.

A traveling salesman cannot bind his principal for laundry and other items, such as express and telegrams, unless connected with his business; nor can he without express authority bind his principal for his hotel bills, especially where the credit in the first instance is given to the agent himself. (83 Mo. App. Rep. 491).

The Native Jeweler of Ceylon.

(George Cecil in *The Jeweller and Metalworker.*)

ALTHOUGH the native jewelers of Ceylon possess neither palatial establishments, extensive and valuable stocks, stones of rare luster and brilliancy, nor a wealthy *clientèle,* their business is one which brings in plenty grist to the mill. It must not be supposed that this desirable state of affairs is owing to the profit made on sales to the Governor and his gilded staff, for Anglo-Cingalese officials are the last people to invest heavily in trinkets. It is rather travelers and other visitors to Ceylon's capital who give the Colombo native jeweler a helping hand in the matter of making his fortune by purchasing from him, at more or less exorbitant rates, jewelry of somewhat questionable value. Indeed, for every trinket or stone sold to a Colombo Judge, Magistrate, or other well-paid Government employe, the coffee-colored jeweler disposes of quite a number to the wandering "globe-trotter."

Upon the arrival of a steamer in Colombo's picturesque harbor the vessel will be surrounded by half a dozen or so boats and "catamarans," the last named being a description of raft made of exceedingly rough hewn logs and a portion of the trunk of a tree. On board of this flotilla are several natives, each of whom is provided with a box containing his stock-in-trade. Upon permission being given these fortune-seeking nestors of commerce, they will clamber up the ship's side—by means of ropes if the ladder is not available. Such a method of finding their way to the deck occasionally results in their falling into the sea—much to the edification of the passengers. It may be added that the merry-hearted Cingalee does not in the least mind an involuntary bath of this nature, provided that the cherished tortoiseshell comb (with which he confines in its place his back hair) does not find a watery grave. In this case he would employ a native boy to dive for it until it is found, and he would not think of proceeding with his business until the heirloom had been restored to him. It may, in this connection, be pointed out that to be seen in public without his comb is exceedingly repugnant to the indigenous mind. What pantaloons are to a white man is the tortoiseshell comb to a brown one. Having succeeded in obtaining permission from the vigilant quartermaster to assail the passengers (or having deluded the watchful eye of the petty officer in question), the man of moonstones will temptingly spread his wares upon the white deck—removing them for that purpose from many rolls of cloth. Mention has been made of these particular stones because they happen to be his most important line of business. It must, however, be understood that he does not confine his attention to moonstones, garnets and rubies, catseyes, pearls and other gems being included in his collection. But since the mind of the average purchaser has grasped the idea that to leave Colombo without being possessed of a collection of these particular stones is an improper thing to do, it has been the habit of the Cingalee jeweler from time immemorial to stock his portable show-room with a large collection of moonstones.

Although it is quite possible to obtain a really good moonstone from these Eastern representatives of the jewelry trade, it is to be feared that a certain amount of roguery is practiced by a considerable number of the craft. That, however, does not deter the anxious Englishman from buying moonstones which are more renowned for size than for quality. On the principle of the infant who imagines that every glittering yellow substance must necessarily be gold, the tender subaltern and the callow mercantile fledgling landing at Colombo for the first time will hasten to invest a few rupees or dollars in moonstones which are gigantic of size and poor in color; and should they happen to have the greed of purchase which so strangely attacks some white people when first arriving in the East, they may also buy other stones, sending them to those whom they cherish in England. After a residence of a few months in the country they will probably have cause to regret that they did not seek the opinion of an expert before parting with their money, for the intelligent Cingalee is quick to discriminate between the new comer and the old stager, duly profiting thereby. In addition to doing business with the ordinary bird of passage customer, the Cingalee jeweler also effects sales with the hundreds of ships' officers and sailors who periodically call at Colombo. And when it is borne in mind that each vessel going to and from Australia, the Straits Settlements, Borneo, Burma, Siam and the East Coast of India touches at Colombo, it will readily be understood that the *clientèle* awaiting him may be almost endless. It should also be observed that the colored jeweler who succeeds in pleasing his client will often have the pleasure of selling him a few stones each time he passes through Colombo. Indeed, there are numbers of ships' officers who make a point of extending their patronage to the same merchant voyage after voyage, being met by him directly the steamer casts anchor or is made fast to her moorings. In case the impetuous reader runs away with the impression that the clients in question hoard up the stones thus procured, the writer hastens to point out that the sons of the main usually dispose of them at other ports, or present them to the loved ones at home. Some readers may possibly deduce from the above information that the sailor "has a wife in every port," but this is an injustice to the Cingalese jewelers' best customers.

It sometimes happens that disputes arise between the purchaser and the vendor. And as the white man has been taught to believe that the native considers it his first duty to swindle him, he finds plenty of sympathy awaiting him should there be a disagreement regarding the price to be paid. Thus in the event of the Governor's private secretary having promised two dollars for a gigantic moonstone and subsequently endeavoring to obtain it for a quarter of that sum—on the understanding that, being a person of influence with his employer, he is able to persuade him to purchase a similar stone—the rest of the passengers will be quite ready to uphold his version of the story should the jeweler loudly affirm that he is being cheated. And should a tea-planter's wife try to palm off on the Cingalee diamond merchant an imitation brilliant in exchange for a really valuable ruby, she will easily gain the sympathy of every white person on board the steamer. Occasion may here be taken to point out that though there are exceptions to the contrary, it is seldom that the "globe-trotter" element endeavors to swindle the black man, preferring, very rightly, to be cheated by him. And this is, indeed, as it should be, for it is thus that England's prestige in the East is preserved. It may be added that the Cingalese jeweler very readily discriminates between the resident and the occasional customer. It should also be pointed out that up to within a few years ago the native jewelers of Colombo were always ready to extend unlimited credit to English travelers, knowing that honesty was a characteristic trait of the wealthy traveling Briton. Nowadays they have altered their opinion somewhat, and fight shy of the hundreds of mean-minded white people who pass through Colombo on their way to India or to England. Among these are "Commissioners," "Judges," "Cantonment Magistrates," heads of firms, Eurasian "Staff Corps" officers, and so forth.

As to the form of ornamentation and design appertaining to the native jewelry of Colombo, it is not unlike that to be found in India. And the natives are only too glad to invest their savings in the purchase of barbaric gee-gaws. Like the partly-civilized inhabitants of the neighboring country, they will often launch out in hideous and vulgar importations from England and Germany, wearing these at wedding feasts and on holiday occasions. In fact, it is quite a common sight to see a male Cingalee strutting about with ring-bedizened fingers, a particularly dreadful tie-pin, and a watch chain the size of a miniature cable. Indeed, so ready are the well-to-do Cingalese and half-castes to invest in jewelry of this nature, that a ready market should await those English manufacturing jewelers who desire to get rid of out-of-date stock.
